**Notes:**

1. File Rejection Rate is 0.29%.
2. Average daily Accepted volume is about 14.9 B for Equities and 1.4B for Options.
3. Initial & Adjusted Error Rates include Late + Rejections + Intrafirm Errors.

# Compliance Error Rate Calculation

- Effective October 26, 2020, the Daily Compliance Error Rates on the Reporter Portal Reporting Summary screen are calculated as follows:

Product Type	Calculation
Equities	(Accepted Late + Outstanding Rejections (Ingestion and Intrafirm) + Outstanding Intrafirm Unlinked Events + Outstanding Out of Sequence Events + <b>Outstanding Interfirm Unlinked Events + Outstanding Exchange Unlinked Events + Outstanding TRF Unlinked Events</b> )/Total Processed
Options	(Accepted Late + Outstanding Rejections (Ingestion and Intrafirm) + Outstanding Intrafirm Unlinked Events + Outstanding Out of Sequence Events)/Total Processed
ALL	{{(Accepted Late + Outstanding Rejections (Ingestion and Intrafirm) + Outstanding Intrafirm Unlinked Events + Outstanding Out of Sequence Events + <b>Outstanding Interfirm Unlinked Events + Outstanding Exchange Unlinked Events + Outstanding TRF Unlinked Events</b> ) for Equities} + {(Accepted Late + Outstanding Rejections (Ingestion and Intrafirm) + Outstanding Intrafirm Unlinked Events + Outstanding Out of Sequence Events) for Options}/Total Processed

- The records counted in the numerator of the Daily Compliance Error Rate are a distinct count of Events. For example, if a record that is reported late has an out of sequence event and an interfirm unlinked event, then it will be counted only once in the Daily Compliance Error Rate.
- Named Errors do not participate in Compliance Error Rate.

### ➤ Breakdown of Overall Error Rate

REASONS:	Percentage of Overall Error Rate	
	Sender (Routes)	Receiver (Accept/Modify)
Routed Order ID mismatch (8003/9003)	97.73%	98.34%
SenderIMID mismatch (8005/9005)	0.99%	0.71%
ReceiverIMID mismatch (8007/9007)	0.64%	0.46%
Symbol mismatch (8009/9009)	0.01%	0.01%
Multiple mismatches (8011/9011)	0.04%	0.04%
Route key duplicate (8013/9013)	0.59%	0.45%

# Observations with Differences in Interfirm Linkages Key

---

The following scenarios are generating unlinked events and have been observed across many firms:

1. Firms populating the *orderId* as the *routedOrderID*; Counterparty reporting another value
2. Firms populating prefix in *routedOrderID*
  - Firms populating prefix: FIRMA *routedOrderID* = **XXX**123ABCD;  
FIRMB *routedOrderID* = 123ABCD
3. Firms populating suffix in *routedOrderID*
  - Firms populating suffix: FIRMA *routedOrderID* = 1111**ABCD**;  
FIRMB *routedOrderID* = 1111
4. Firms submitting MENOs instead of MEOAs
5. Sender and Receiver populating different IMIDs
6. Firms improperly marking an Exchange Route as an Interfirm Route

# Unlinked Interfirm Routes

## OTC Equity– Foreign Routes

---

- Industry Member Broker 1 receives a customer order in an OTC equity symbol for a foreign security and routes the order to Broker 2. Broker 2 routes the order to a foreign market where the order is executed and trade reported.
  - Broker 2 knows that the order was executed and reported on a foreign market and does not have a CAT reporting obligation in accordance with FAQ I1.
  - Broker 1 does not know the status of the execution and reports the order to CAT in accordance with FAQs I2 and I4.
  - Since Broker 1 reported the route to Broker 2, but broker 2 did not have an obligation to report the receipt, both parties will receive a linkage error.

# OTC Equity– Foreign Routes Planned IM Tech Spec Update

---

- Add a new `destinationType` to the IM Tech Spec 'O'
  - This value would be used in instances where an order in an OTC equity symbol for a foreign security was routed to another Industry Member, who may route the order to a foreign market for execution.
- When 'O' is populated, if a corresponding *routedOrderID* is found, linkage will be made. If no corresponding *routedOrderID* is found reported by the receiving party, linkage feedback will not be returned.

---

# Exchange Linkage Updates

---

# Exchange Linkage Results

## October 12 – October 16, 2020

---

### ➤ Breakdown of Overall Error Rate

REASONS:	Percentage of Overall Error Rate
Routed Order ID mismatch (6003)	8.54%
Sender IMID mismatch (6005)	9.61%
Symbol mismatch (6007)	0.00%
Session mismatch (6009)	73.41%
Multiple mismatches (6011)	4.69%
Route key duplicate on route to exchange (6013)	3.74%
Route key duplicate on order accept/modify from exchange (6015)	0.00%

# Observations with Differences in Exchange Linkages Key

---

The following scenarios are generating unlinked events and have been observed across many firms:

1. Firm populating incorrect Exchange ID in destination field.
2. Industry Member and Exchange populating different IMIDs.
3. Session IDs incorrectly populated.
4. Firms improperly marking an Exchange Route as an Interfirm Route or reporting routing to an exchange when the order was routed to another Industry Member (such as a floor broker).
5. Routed Order IDs do not match.

Other linkage items:

- Fix for NYSE Options exchange session prefix issue was implemented on Trade Date October 13, 2020.
- Firms are getting named errors from NASDAQ option exchanges due to an internal system route happening at the exchange. The original routing party is being sent on the internal route event, so FINRA CAT is attempting linkage. NASDAQ and FINRA CAT are working to resolve this issue.

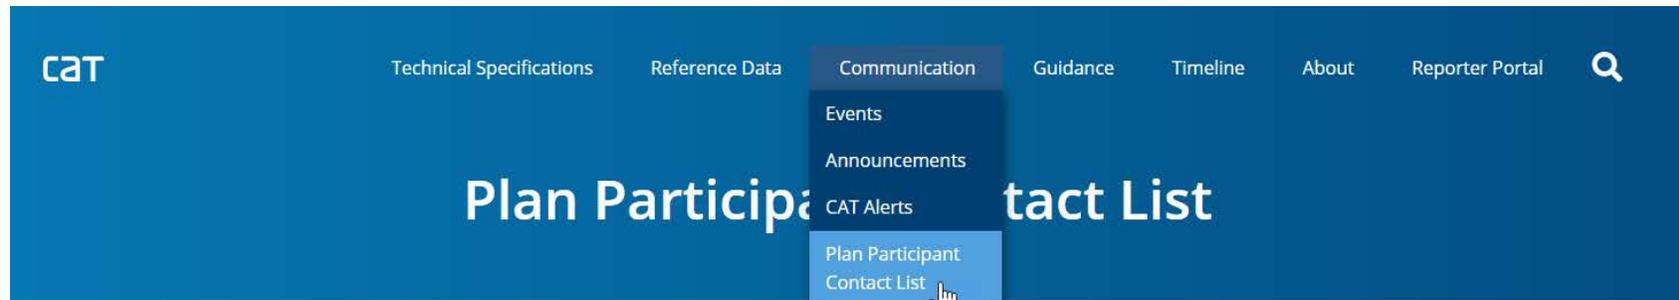

# Blanks, Leading Zeros and Special Characters

- Leading zeroes
  - Leading zeroes are removed at ingest from fields that are data type 'Numeric'
  - Leading zeroes are removed from the routedOrderID and session fields at time of Route Linkage Key construction
- <Blank> Characters
  - Leading and trailing <blank> characters are removed at ingest from fields that are data type 'Text' and 'Alphanumeric'
  - A <blank> character in the middle of the routedOrderID and session fields is NOT removed. For example, if an Industry Member submits "ABC 123" and the Exchange submits "ABC123" an unlink error will occur.
- Firms should take note of each exchange's interface specifications regarding special characters or spaces, as some exchange transmission protocols may remove certain characters or spaces. This field must match the value for routedOrderID reported by the exchange in their Order Accepted event.
- Feedback files will NOT contain FINRA CAT alterations to 'Text' and 'Alphanumeric' fields made during Route Linkage Key construction. For example, when researching the following linkage error, Industry Members should note the leading zero was removed during the linkage process and the error is related to the special character.

Submission	Linkage Key	Feedback
Industry Member: 01234_5678	1234_5678	Industry Member: 01234_5678
Exchange: 12345678	12345678	Exchange: 12345678

# Plan Participant Contact List

Consolidated Audit Trail, LLC and FINRA CAT, LLC have published the [Plan Participant Contact List](#) on the [CAT website](#). This list provides Industry Members with a contact for error linkage issues and interpretive issues related to the respective Plan Participant. This list will continue to be updated as additional contact information is available.

# TRF Linkage Updates

---

# TRF Linkage Results

## October 12 – October 16, 2020

---

### ➤ Breakdown of Overall Error Rate

REASONS:	Percentage of Overall Error Rate
Tape Trade ID mismatch (4003)	69.99%
Market Center ID mismatch (4005)	2.97%
Symbol mismatch (4007)	0.00%
Multiple mismatches (4009)	26.04%
Duplicate TRF key mismatches (4011)	0.99%

# Observations with Differences in TRF Linkage Key

---

The following scenarios are generating unlinked events and have been observed across firms. The Industry Member is:

1. Populating a different CATReporterIMID on the MEOT than in the TRF/ADF/ORF report.
2. Populating an incorrect Reporting or Contra Branch Sequence Number or Compliance ID.
  - Have seen instances where in cross scenarios, firms are putting a “B” or “S” in front of the Branch/Seq, etc. in the TRF report (to facilitate OATS) but are reporting the Tape Trade ID on the MEOT without the “B” or “S” prefix.
  - Have seen instances where the Reporting Industry Member populates the Contra Branch Sequence Number or Compliance ID when it is not on that side of the trade report (e.g., the CATReporterIMID is on the Reporting side while the *tapeTradeID* is on the Contra side).
3. Populating an incorrect Market Center ID.
  - Have seen instances where firms populate the exchange code instead of the TRF code.
4. Reporting a duplicated TRF Linkage Key.
5. Populating the *tapeTradeID* in the *tradeID* field.

# Ingestion Error Received after Attempted Repair of a Linker Error (1 / 2)

- ▶ IM 1 has an exchange linkage error due to incorrect *session* value
- ▶ IM 1 repairs the session but inadvertently disrupts the *side* value in the repair submission
- ▶ Now IM 1 has both linkage and ingestion errors on the same record

If both the original submission and repair record have the **same firmROEID**, then the IM must submit a 'COR' record with the same firmROEID which will resolve all errors.

Both the original submission and repair record have the same firmROEID

# Reminders

---

- On June 29, 2020, new versions of the Options Start of Day and End of Day symbol files were introduced to include the Test Option Series flag identifying options test symbols.
- Existing versions of the files without the test flag will continue to be available until December 14, 2020, when they will be retired. Firms that use these files should plan to transition to the new versions prior to that time.
- On Wednesday, October 21, 2020 at 4:15 pm ET, Consolidated Audit Trail, LLC and FINRA CAT, LLC will host an industry webinar with a specific focus on Industry Members serving as an outbound router on behalf of an NMS Exchange.

# Latest Updates

---

- The Industry Member Compliance Report Card Glossary was updated on October 16, 2020 to include updated definitions effective with the September 2020 Report Card.
