| 9.1.5. | Trade is Incorrectly Reported to both CAT and to the Trade Reporting Facility | 816 |

Executive Summary

This document is a companion document to the [CAT Reporting Technical Specifications for Industry Members \("Technical Specifications"\)](#) and is provided to assist Industry Members in implementing the reporting requirements laid out in the Technical Specifications. This document illustrates the specific reporting requirements for a variety of order handling execution scenarios for both equities and options Eligible Securities (as defined in the CAT NMS Plan). The scenarios illustrate the reporting requirements for Phase 2d.

The reporting scenarios are presented in a separate document from the Technical Specifications to provide the greatest flexibility in the ability to modify or add scenarios as new questions are presented and trading practices evolve. It is expected that changes and additions will be necessary for reporting scenarios with greater frequency than changes to the Technical Specifications that would be required when record format, field value changes, etc., occur. By maintaining a separate reporting scenarios document, reporting scenarios may be clarified or added without the need for a new version of the Technical Specifications.

This document contains interpretive guidance for Industry Member CAT Reporters with respect to how the Technical Specifications must be implemented. As such, any changes to this document are subject to the same review and approval process by the Operating Committee, pursuant to the CAT NMS Plan, as the Technical Specifications.

This document represents a phased approach to industry reporting. The Participants propose to seek a modification of the requirements of the CAT NMS Plan from the Securities and Exchange Commission ("Commission") to reflect the phased approach for the Industry Member CAT reporting described in the Technical Specifications. The proposed amendment will be subject to the approval of the Commission.

An archived version of the revision/change log detailing changes to previous versions of this document is available at www.catnmsplan.com.

1. Introduction

This document is organized by product, and then within each product, by general handling scenario, such as order receipt and routing, order execution, etc.

For each scenario, a description of the scenario along with a diagram is provided and then is followed by specific Event Reports illustrating the correct values to be populated for each field. All examples are illustrative and do not identify all applicable fields.

2. Equity Scenarios and Examples

This section illustrates sample equity reporting scenarios. Each scenario will include a brief description including the reportable CAT events, a flow chart, and step-by-step reporting responsibilities. Refer to Section 4 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.1. Order Route Scenarios

This section illustrates the CAT reporting requirements when an order is received or originated, and is subsequently routed away from the firm for execution. Refer to Section 4.3 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.1.1. New Principal Order Routed to an Exchange and Executed

This scenario illustrates the CAT reporting requirements when an Industry Member originates a new principal order, routes the order to an exchange, and the order is executed on the exchange.

Industry Member Broker 1 is required to report:

- The origination of a principal order (New Order event)
- The route to an exchange (Order Route event)

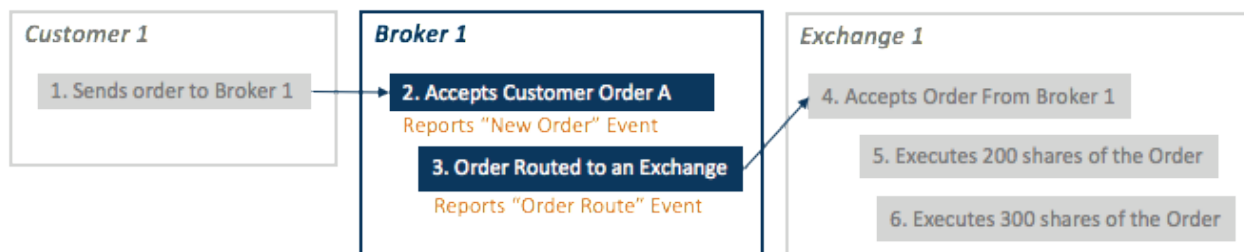

The execution will be reported by the exchange.

| # | Step | Reported Event | Comments |
|---|---------------------------------|--|----------|
| 1 | Broker 1 originates a New Order | Broker 1 reports a New Order event type: MENO orderKeyDate: 20180501T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 manualFlag: false deptType: T side: B price: 10.00 quantity: 1000 orderType: LMT | |

| # | Step | Reported Event | Comments |
|---|--|--|---|
| | | timeInForce: DAY=20180501 tradingSession: REG custDsplntrFlag: false firmDesignatedID: PRO001 accountHolderType: P affiliateFlag: false negotiatedTradeFlag: false representativeInd: N | |
| 2 | Broker 1 routes the order to Exch 1 | <i>Broker 1 reports an Order Route event</i> type: MEOR orderKeyDate: 20180501T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234556 manualFlag: false senderIMID: 123:FRMA destination: EXCH1 destinationType: E routedOrderID: AO123 session: s5 side: B price: 10.00 quantity: 1000 orderType: LMT timeInForce: DAY=20180501 tradingSession: REG affiliateFlag: false isoInd: NA | Since Broker 1 is routing to a national securities exchange, <i>session</i> must be populated. The <i>senderIMID</i> field must be populated using the format <CRD>:<IMID> as described in the IM Technical Specifications in order to manage IMID conflicts. |
| 3 | Exch 1 accepts the order from Broker 1 | <i>Exch 1 reports a Participant Order Accepted event</i> | |
| 4 | Exch 1 executes the full quantity of the order | <i>Exch 1 reports a Participant Order Trade event</i> | |

2.1.2. Customer Order Routed to an Exchange as Agent

This scenario illustrates the CAT reporting requirements when an Industry Member routes a customer order to an exchange on an agency basis.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to the exchange (Order Route event)

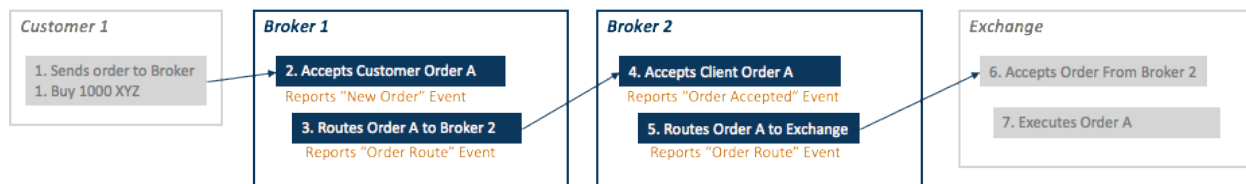

In this scenario, since the execution is passed back directly to the customer, no Order Fulfillment event is required to be reported.

| # | Step | Reported Event | Comments |
|---|---|--|---|
| 1 | Customer sends a Buy order to Broker 1 | NA | |
| 2 | Broker 1 accepts the customer order | <p><i>Broker 1 reports a New Order event</i></p> <p>type: MENO orderKeyDate: 20180417T000000 orderID: O11111 symbol: XYZ eventTimestamp: 20180417T153035.234456 manualFlag: false deptType: A side: B price: 10.00 quantity: 500 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG custDspIntrFlag: false firmDesignatedID: INS001 accountHolderType: A affiliateFlag: false negotiatedTradeFlag: false representativeInd: N</p> | |

Alternatively, firms have the option to re-state all <i>handlingInstructions</i> values. The <i>senderIMID</i> field must be populated using the format <CRD>:<IMID> as described in the IM Technical Specifications in order to manage IMID conflicts. |
| 4 | The Exchange accepts the order from Broker 1 | EXCH1 reports a Participant Order Accepted event | |
| 5 | The Exchange executes a partial quantity (200) of the order | EXCH1 reports a Participant Order Trade event | |
| 6 | The Exchange executes a partial quantity (300) of the order | EXCH1 reports a Participant Order Trade event | |

2.1.3. Order Routed between Two Industry Members and Subsequently Executed on an Exchange

This scenario illustrates the CAT reporting requirements when an order is routed from one Industry Member to another prior to execution on an Exchange.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The route of Broker 1's order to the exchange (Order Route event)

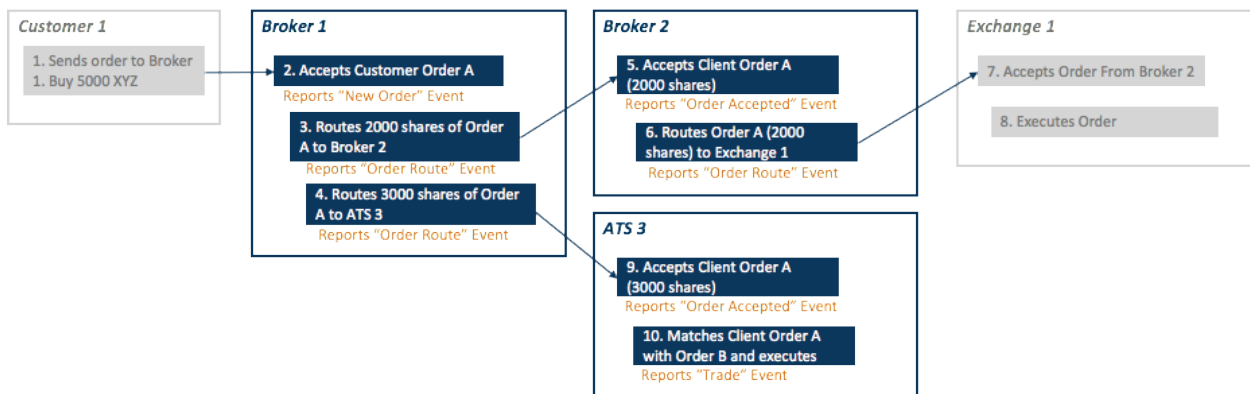

| # | Step | Reported Event | Comments |

2.1.4. Order Routed to Multiple Destinations and Filled

This scenario illustrates the CAT reporting requirements when a customer order is routed to multiple destinations. In this scenario, the order is partially routed to another Industry Member followed by an exchange, and is partially routed to an ATS.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route to Broker 2 (Order Route event)
- The route to ATS 3 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The route to Exchange 1 (Order Route event)

Industry Member ATS 3 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The matching and execution of Broker 1's order (Trade event)

2.1.5. Order Routed from an Exchange through a Routing Broker

This scenario illustrates the CAT reporting requirements when an exchange routes an order through its affiliated Industry Member routing broker to another exchange.

Industry Member Broker 1 is required to report:

- The receipt of the order from Exchange 1 (Order Accepted event)
- The route of the order to Exchange 2 (Order Route event)

Exchange 1 is required to report the following as outlined in the [CAT Reporting Technical Specifications for Plan Participants](#):

- The route of the order to its routing broker (Participant Order Route event)
- The fill of the routed order (Participant Order Fill event)

Exchange 2 is required to report the following as outlined in the [CAT Reporting Technical Specifications for Plan Participants](#):

- The receipt of the order from Broker 1 (Participant Order Accepted event)
- Matching and execution of Broker 1's order (Participant Order Trade event)

In the event that Broker 1 routes the order to another broker-dealer as opposed to an exchange, Broker 1 would report an Order Accepted event and Order Route event as outlined above, with the Order Route event reflecting a route to another broker-dealer. The broker-dealer receiving the order from Broker 1 would report an Order Accepted event, along with any subsequent actions on the order.

| # | Step | Reported Event | Comments |
|---|---|--|----------|
| 1 | Exchange 1 routes an order to its routing broker, Broker 1. | <i>Exchange 1 reports a Participant Order Route event</i> | |

| # | Step | Reported Event | Comments |
|---|--|--|--|

| 5 | Exchange 2 crosses Broker 1's order | <i>Exchange 2 reports a Participant Order Trade event</i> | |
| 6 | Exchange 1 receives the fill | <i>Exchange 1 reports a Participant Order Fill Event</i> | |

2.1.6. Customer Order Facilitated via a Firm Agency Account Where a Route can be Directly Associated with the Customer Order

This scenario illustrates the CAT reporting requirements when an Industry Member facilitates a single customer order via a firm agency account, commonly referred to as an “agency flip” scenario.

In this example, the Industry Member receives a customer order and then generates a firm order in its agency account, which is sent to the market. In this instance, the Industry Member's order handling and/or reporting system allows the route sent to the street to be directly associated with the customer order. Since the firm's system maintains the direct association between the customer order and the actions taken to facilitate that order, the firm is not required to report a separate representative order.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order from its agency account (Order Route event)

| # | Step | Reported Event | Comments |
|---|--|----------------|----------|
| 1 | Customer sends a Buy order to Broker 1 | NA | |

| # | Step | Reported Event | Comments |
|---|--|--|--|
| 2 | Broker 1 accepts the customer order | <p><i>Broker 1 reports a New Order event</i></p> <p> type: MENO orderKeyDate: 20180417T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180417T153035.234456 manualFlag: false deptType: A side: B price: 10.00 quantity: 1000 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG custDspIntrFlag: false firmDesignatedID: INS001 accountHolderType: A affiliateFlag: false negotiatedTradeFlag: false representativeInd: N </p> | |
| 3 | Broker 1 generates a firm order | N/A | Since the Industry Member's system maintains a direct association between the customer order and the route sent to the street on behalf of the customer, a representative order is not required. |
| 4 | Broker 1 routes the order to an exchange | <p><i>Broker 1 reports an Order Route event</i></p> <p> type: MEOR orderKeyDate: 20180417T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180417T153036.234556 manualFlag: false senderIMID: 123:FRMA destination: EXCH1 destinationType: E routedOrderID: XYZO555 session: s5 side: B price: 10.00 quantity: 1000 orderType: LMT </p> | |

| | | timeInForce: DAY=20180417 tradingSession: REG affiliateFlag: false isoInd: NA | |
| 5 | The Exchange accepts the order from Broker 1 | <i>EXCH1 reports a Participant Order Accepted event</i> | |
| 6 | The Exchange partially executes the order (300 shares) | <i>EXCH1 reports a Participant Order Trade event</i> | |
| 7 | The Exchange executes the remainder of the order (700 shares) | <i>EXCH1 reports a Participant Order Trade event</i> | |

2.1.7. Order Routing via Smart Router Provided by another Industry Member

This scenario illustrates the CAT reporting requirements when an introducing firm receives a customer order and enters it directly to a Smart Router provided by another Industry Member. The Smart Router provided by the Industry Member does not need to report to CAT when all of the following conditions apply:

- 1) The Industry Member providing the order routing system has no discretion over the order once it is entered into the Industry Member's order-routing system. The order routing destination ("Destination Market Center") must either be directed by the originating Industry Member or be subject to the pre-determined routing mechanism agreed to by the originating Industry Member. The Industry Member providing the order routing system would have no involvement relating to the routing of the order, other than providing the routing mechanism.
- 2) The originating Industry Member must have established a relationship with the Destination Market Center, including meeting any and all applicable requirements to route orders to that destination. The originating Industry Member understands that the Industry Member providing the order routing system has no involvement with respect to the order in any way, except for providing a routing mechanism. No pre-established relationship between the Industry Member providing the order routing system and the Destination Market Center would be necessary for the originating Industry Member to access the routing destination.
- 3) The Destination Market Center views the order as coming directly from the originating Industry Member, not the Industry Member providing the order routing system, for all purposes, but not limited to, CAT reporting, trade reporting, applicable fees, etc.

- 4) The originating Industry Member, rather than the member providing the order routing system, identifies itself as the routing firm for purposes for the SEC Rule 606 (formerly SEC Rule 11Ac1-6).

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order through a Smart Router (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of the order (Trade event)

The Industry Member providing the order routing system is not required to report to CAT. In accordance with [CAT FAQ D35](#), the *handlingInstructions* value of 'SMT' (Smart Router) has been retired and must not be reported in Phase 2d.

2.2. Trade Scenarios

This section illustrates the CAT reporting requirements when the execution of a customer/client order is required to be reported for public dissemination purposes, and the use a Trade event is required. Refer to Section 4.12 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.2.1. Agency Order Cross

This scenario illustrates the CAT reporting requirements when an Industry Member matches a Customer Buy order with a Sell order received from another Industry Member.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The receipt of the order from Broker 2 (Order Accepted event)
- The matching and execution of both orders (Trade event)

Industry Member Broker 2 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Broker 1 (Order Route event)

Broker 1's customer order was fully executed, while Broker 2's customer order was partially executed.

2.2.2. Internalized Trade against Proprietary Account

This scenario illustrates the CAT reporting requirements when an Industry Member executes a customer order against its own proprietary account, and does not generate a new order to facilitate the execution of the customer order.

Industry Member Broker 1 is required to report:

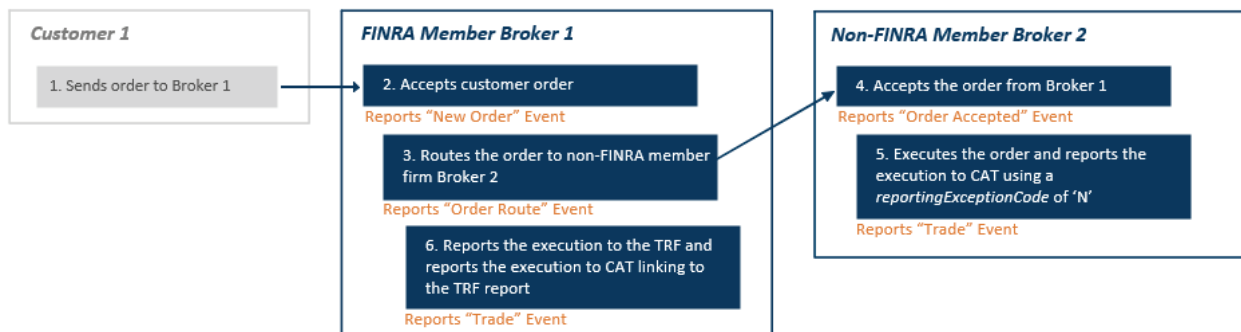

- The receipt of the customer order (New Order event)
- The execution of the customer order against its proprietary account (Trade event)

| # | Step | Reported Event | Comments |

2.2.3. Order is Routed to and Executed by a Non-FINRA Member Firm, but the Routing FINRA Member Firm Must Report the Trade to the TRF

This scenario illustrates the CAT reporting requirements when a FINRA member firm receives an order and routes the order to a non-FINRA member firm, who executes the order. In this scenario, both parties will be required to report the order to CAT. Although the non-FINRA member firm executed the trade, the FINRA member has an obligation to report the trade to the TRF. In the TRF report, the FINRA member firm will be identified as the executing firm on the trade report with a blank contra, and the non-FINRA member will be unable to link to the trade report.

FINRA Member Broker 1 is required to report:

- The receipt of the order (New Order event)
- The route of the order to non-FINRA Member Broker 2 (Order Route event)
- The execution of the order (one-sided Trade event linking to the TRF report with a *sideDetailsInd* of 'BUY')

Non-FINRA Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of the order (Trade event with a *reportingExceptionCode* of 'N' and)

FINRA member Broker 1 is required to report the execution to CAT using a Trade event with linkage to the TRF report. Broker 1 is only required to report its own side of the execution in the Trade event side details. The *sideDetailsInd* field must be populated with a value of 'BUY', indicating that the Trade event is one sided, and that only the *buyDetails* will be populated.

Non-FINRA member Broker 2 is required to report the execution to CAT using a Trade event with a *reportingExceptionCode* of 'N' indicating that linkage to the related trade report is not available, as the Trade was executed by a non-FINRA member and reported to the TRF by the FINRA member counterparty. Broker 2 is required to report a two sided trade event showing that the order received from Broker 1 was executed in its proprietary account.

| # | Step | Reported Event | Comments |

2.2.4. Industry Member Acting in a Mixed Capacity

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order and handles the order in a mixed capacity. In this scenario, the Industry Member receives a customer order for 1,000 shares, routes 500 shares as agent to an exchange for execution, and executes the remainder from a proprietary account.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (MENO)
- The partial route of the customer order to an exchange (MEOR)
- The execution of the remainder of the order from a proprietary account (MEOT)

2.3. Representative Order Scenarios

This section illustrates the CAT reporting requirements when an Industry Member generates a representative order in a firm account to facilitate a single customer/client order. Refer to Sections 2.5.8 and 2.11.4 for additional representative order scenarios. Refer to Appendix C of the [CAT Reporting Technical Specifications for Industry Members](#) and [Section F of the CAT FAQs regarding Representative Orders](#) for additional information.

2.3.1. Fill of a Single Customer Order on a Riskless Principal Basis

This scenario illustrates the CAT reporting requirements when an Industry Member fills a customer order on a Riskless Principal basis. In this example, Industry Member Broker 1 generates a representative order to facilitate the execution of a customer order, and routes the order to an exchange for execution.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of a representative order (New Order event)
- The route of the representative order to the exchange (Order Route event)
- The fill of the customer order on a Riskless Principal basis (Order Fulfillment Event)

Explicit linkage between the customer order and the representative order is required in the *aggregatedOrders* field on the representative MENO and the *firmDetails* on the MEOF.

The same guidance would apply in a scenario where one or more of the orders being represented was a proprietary order.

Although the firm's representative order was a buy order, the <i>side</i> field in the <i>firmDetails</i> must be populated with a value of 'SL' to indicate that the firm sold shares to the customer. |

2.3.2. Fill of Multiple Customer Orders on a Riskless Principal Basis

This scenario illustrates the CAT reporting requirements when an Industry Member generates a proprietary order to facilitate the execution of more than one customer order on a Riskless Principal basis.

In this scenario, Industry Member Broker A receives two customer orders to buy XYZ at 10.01, and generates a single representative order that will be used to facilitate the execution of these two customer orders. The representative order is routed to an exchange where it is executed. Upon execution of the representative order, the Industry Member fills each of the customer orders on a Riskless Principal basis.

Industry Member Broker A is required to report:

- The receipt of each customer order (New Order events)
- The generation of a representative order (New Order event)
- The route of the representative order to the exchange (Order Route event)
- The fill of each customer order on a Riskless Principal basis (Order Fulfillment events)

The execution of the representative order is reported by the exchange.

Explicit linkage between each customer order and the representative order is required in the *aggregatedOrders* field on the representative MENO and the *firmDetails* in each MEOF.

The guidance outlined in this scenario would also apply when an Industry Member combines multiple customer orders into an aggregated or combined order that is not a “representative proprietary” order.

2.3.3. Single Customer Order Handled on a Riskless Principal Basis Where No Execution Occurs

This scenario illustrates the CAT reporting requirements when an Industry Member handles a customer order on a Riskless Principal basis, but the order is ultimately not filled. In this example, Industry Member Broker 1 generates a representative order to facilitate the execution of a customer order, but no further action occurs on the order due to market conditions.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of a representative order (New Order event)

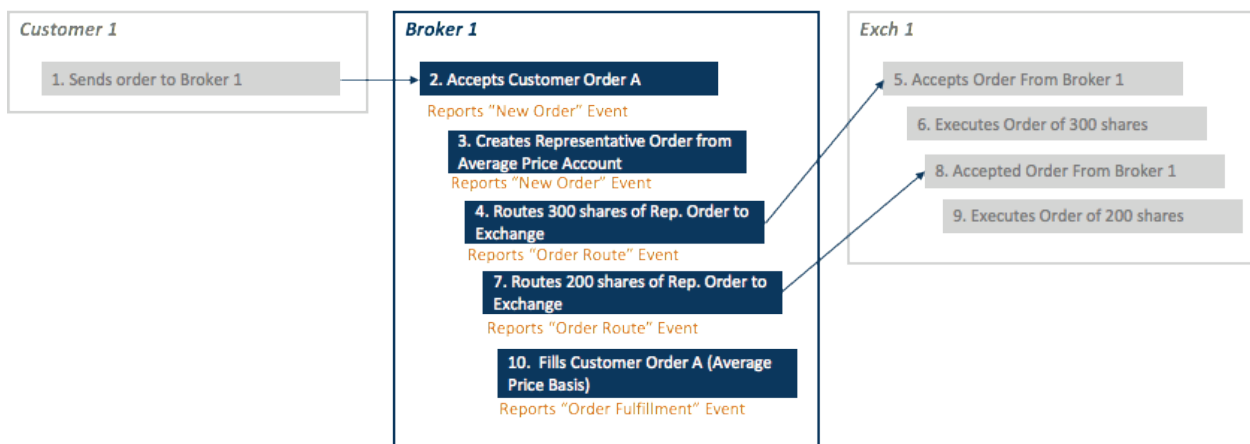

Explicit linkage between the customer order and the representative order is required in the *aggregatedOrders* field on the representative MENO.

| # | Step | Reported Event | Comments |

The <i>aggregatedOrders</i> field must be populated. |

2.3.4. Fill of a Single Customer Order on an Average Price Basis

This scenario illustrates the CAT reporting requirements when an Industry Member works a customer order through an average price account and generates one or more representative orders that are routed to an exchange. The Industry Member then fills the customer order on an average price basis.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)

- The generation of a representative order in an average price account (New Order event)
- Each route of the representative order (Order Route events)
- The fill of the customer order at an average price (Order Fulfillment event)

Explicit linkage between the customer order and the representative order is required in the *aggregatedOrders* field on the representative MENO and the *firmDetails* on the MEOF.

Refer to [Scenario 2.1.6](#) for guidance on reporting requirements when an Industry Member facilitates a single customer order via a firm agency account, commonly referred to as an “agency flip” scenario.

2.3.5. Fill of a Single Customer Order from a Pre-Existing Principal Order

This scenario illustrates the CAT reporting requirements when an Industry Member fills a single customer order from a pre-existing principal order as a result of a Manning Obligation. In this scenario, the Industry Member originates a new principal order and routes it to an exchange. Before the principal order is executed, the Industry Member receives a customer order. Upon execution of the principal order, the Industry Member fills the customer order on a Riskless Principal basis.

Industry Member Broker 1 is required to report:

- The origination of the principal order (New Order event)
- The route of the principal order to an exchange (Order Route event)
- The receipt of the customer order (New Order event)
- The fill of the customer order on a Riskless Principal basis (Order Fulfillment event)

Explicit linkage between the customer order and the principal order is required through the *firmDetails* on the MEOF when the customer order is filled from a pre-existing principal order.

| # | Step | Reported Event | Comments |

2.3.6. Customer Order is Received and Filled on a Net Basis

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order and generates a representative order to facilitate the execution of the customer order. The Industry

Member routes the representative order to an exchange for execution, then sells the shares to the customer at a different price than it purchased the shares on the exchange. This scenario is commonly referred to as 'net trading'.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of the representative order (New Order event)
- The route of the representative order to an exchange (Order Route event)
- The execution of the customer order at a net price (Trade event)

In this scenario, since the customer order is executed at a price different than what Broker 1 received on the exchange, Broker 1 has an obligation to submit a media trade report for public dissemination purposes. Therefore, Broker 1 would be required to report a Trade event representing the outcome of the customer order as opposed to an Order Fulfillment event.

Explicit linkage between the customer order and the representative order is required in the *aggregatedOrders* field on the representative MENO.

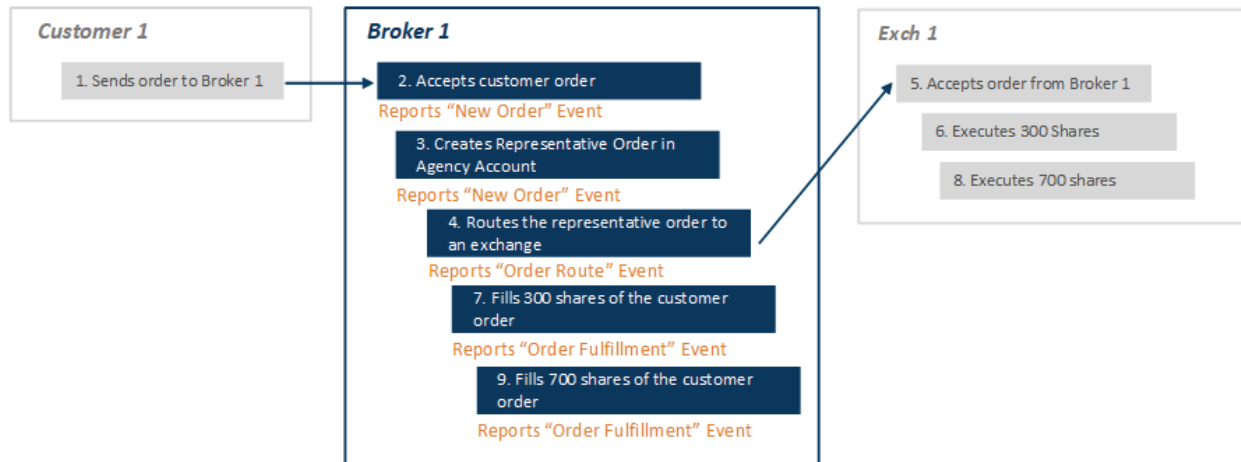

| # | Step | Reported Event | Comments |

2.3.7. Fill of a Single Customer Order with Multiple Executions Print for Print

This scenario illustrates the CAT reporting requirements when an Industry Member generates a representative order in its agency account to facilitate a single customer order. The representative order is routed out to the market and receives multiple fills, which are passed back to the customer's account on a print for print basis.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of the representative order (New Order event)
- The route of the representative order to the exchange (Order Route event)
- Each print for print fill of the customer order (Order Fulfillment event)

Explicit linkage between the customer order and the representative order is required in the *aggregatedOrders* field on the representative MENO and the *firmDetails* on each MEOF.

2.3.8. Firm Generates a Representative Order to Facilitate the Execution of another Representative Order

This scenario illustrates the CAT reporting requirements when an Industry Member generates a representative order to facilitate the execution of another representative order. In this scenario, the Industry Member receives two customer orders, and generates a single representative order (Representative Order A) in its agency average price account that will be used to facilitate the execution of these two customer orders. The Industry Member then generates a second representative order (Representative Order B) to facilitate the execution of the original representative order on a Riskless Principal basis.

Industry Member Broker 1 is required to report:

- The receipt of each customer order (New Order events)
- The generation of Representative Orders A and B (New Order events)
- The route of Representative Order B to an exchange (Order Route event)
- The fill of Representative Order A on a Riskless Principal basis (Order Fulfillment event)
- The fill of each customer order from its agency average price account (Order Fulfillment events)

The execution of Representative Order B is reported by the exchange.

Since Representative Order A was generated to represent more than one customer order, explicit linkage between Representative Order A and each customer order is required through the *aggregatedOrders* field in the MENO for Representative Order A and the *firmDetails* in each MEOF representing the fill of a customer order.

Explicit linkage between Representative Order A and Representative Order B is required through the *aggregatedOrders* field in the MENO for Representative Order B and the *firmDetails* in the MEOF representing the fill of Representative Order A.

This reporting scenario is applicable when a firm's system generates two separate and distinct representative orders. This reporting scenario is not applicable if the firm's system only generates one representative order, combining steps 5 and 6. If the two representative orders are generated by different desks or departments within the firm, an Order Internal Route Accepted event is required.

2.3.9. Fill of Multiple Customer Orders at an Average Price Using an Unlinked OMS/EMS

This scenario illustrates the CAT reporting requirements when an Industry Member fills customer orders at an average price, but a direct electronic link does not exist between its OMS and EMS. In this example, Industry Member Broker 1 receives three customer orders in its OMS, and generates a representative order to facilitate the execution of the customer orders in its EMS. The representative order is further routed to an exchange for execution, where it receives multiple fills. The Industry Member manually assigns fills to the customer orders in its OMS at an average price of the fills received on the exchange.

In this scenario, direct electronic linkage does not exist between the customer orders and the representative order because direct electronic linkage does not exist between the firm's OMS and EMS.

Industry Member Broker 1 is required to report:

- The receipt of each customer order (New Order events)
- The generation of a representative order (New Order event)
- The route of the representative order to the exchange (Order Route event)
- The fill of each customer at an average price (Order Fulfillment event)

In this scenario, explicit linkage between the customer orders and the representative order is not required, since there is no direct electronic link in the firm's system between the orders being represented and the representative order. However, CAT requires that the orders be marked with the relevant *representativeInd* or *fulfillmentLinkType* value of "YE" to indicate that each order was eligible for customer fills via an unlinked system.

The Industry Member must populate a *representativeInd* value of "YE" on its New Order event reflecting the origination of the representative order. When a *representativeInd* value of "YE" is populated, the *aggregatedOrders* field must be blank.

The Industry Member must populate a *fulfillmentLinkType* value of "YE" on its Order Fulfillment events reflecting the fill of each customer order. When a *fulfillmentLinkType* value of "YE" is populated, the *firmDetails* must be populated with the *accountHolderType* and the FDID of the firm account from which the order was filled, and the *orderId* and *orderKeyDate* fields in the *firmDetails* must be blank.

However, all Industry Members will be required to provide representative order linkages to unlinked OMS/EMS and position fill scenarios no later than July 31, 2023 due to the expiry of the exemptive relief granted by the SEC on November 12, 2020.

Refer to Appendix C of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information on use of the value "YE".

2.3.10. Fill of Multiple Customer Orders at an Average Price from an Existing Position

This scenario illustrates the CAT reporting requirements when an Industry Member fills customer orders at an average price via a workflow whereby individual orders are filled after a position has been established and no direct link exists in the firm's system between any single customer order and any single representative order. In this example, Industry Member Broker 1 receives three customer orders. The Industry Member generates two independent orders, from which part or all of the position at the weighted average cost may be given to the customer. The firm orders are further routed to an exchange for execution, and as the firm orders are filled, a position is established in a firm owned or controlled account. The customer orders are ultimately filled from the firm's resulting position at the weighted average cost.

Industry Member Broker 1 is required to report:

- The receipt of each customer order (New Order events)
- The generation of each firm order (New Order event)

- The route of each firm order to the exchange (Order Route event)
- The fill of each customer order at an average price (Order Fulfillment event)

In this scenario, explicit linkage between the customer orders and the firm order is not required, since there is no direct electronic link in the firm's system, as the customer orders were filled from an existing position. However, CAT requires that the orders be marked with the relevant *representativeInd* or *fulfillmentLinkType* value of "YE" to indicate that each order was eligible for customer fills.

The Industry Member must populate a *representativeInd* value of "YE" on its New Order event reflecting the origination of the firm order, since part or all of the order may be used to fill customer orders. When a *representativeInd* value of "YE" is populated, the *aggregatedOrders* field must be blank.

The Industry Member must populate a *fulfillmentLinkType* value of "YE" on its Order Fulfillment events reflecting the fill of each customer order. When a *fulfillmentLinkType* value of "YE" is populated, the *firmDetails* must be populated with the *accountHolderType* and the FDID of the firm account from which the order was filled, and the *orderId* and *orderKeyDate* fields in the *firmDetails* must be blank.

However, all Industry Members will be required to provide representative order linkages to unlinked OMS/EMS and position fill scenarios no later than July 31, 2023 due to the expiry of the exemptive relief granted by the SEC on November 12, 2020.

Refer to Appendix C of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information on use of the value "YE".

2.3.11. Fill of a Customer Order at a Guaranteed Volume Weighted Average Price

This scenario illustrates the CAT reporting requirements when an Industry Member fills a single customer order at a guaranteed volume weighted average price. In this scenario, the Industry Member receives a customer order to buy 10,000 shares of XYZ and the firm agrees to execute the order at an agreed upon VWAP. The Industry Member originates multiple proprietary orders in an effort to work the customer order. The Industry Member is unable to achieve the VWAP through its execution of the principal orders. Since the Industry Member was unable to obtain the price that was guaranteed to the customer, the Industry Member sells the shares to the customer from a proprietary account at the guaranteed VWAP price.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of each representative order (New Order events)
- The route of each representative order to an exchange (Order Route events)
- The execution of the customer order at the guaranteed VWAP price which was 9.97 (Trade event)

In this scenario, linkage between the customer order and the representative orders is not possible, as the customer order was not filled from the proprietary orders since the guaranteed price was not achieved on the exchange.

In this scenario, since the customer order is ultimately executed from a proprietary account at the guaranteed price, Broker 1 has an obligation to submit a media trade report for public dissemination purposes. Therefore, Broker 1 would be required to report a Trade event representing the outcome of the customer order as opposed to an Order Fulfillment event.

In a scenario where the Industry Member was able to achieve the VWAP through its proprietary orders and fills the customer order in a Riskless Principal capacity, the Industry Member would be required to report Order Fulfillment events with a *fulfillmentLinkType* value of 'Y'. *firmDetails* would be required, and would be populated with the *orderID* of the proprietary order from which the fill came. If the Industry Member's workflow involves a disconnected OMS/EMS or a position fill model, the Industry Member would be required to report an Order Fulfillment event with a *fulfillmentLinkType* value of 'YE'¹, and *firmDetails* would be required. Broker 1 must populate the *firmDetails* with the *accountHolderType* and the FDID of the account from which the order was filled.

| 8 | Exch 1 accepts the proprietary order from Broker 1 | <i>Exch 1 reports a Participant Order Accepted event</i> | |
| 9 | Order is executed on the exchange at an average price of @9.99 per share | <i>Exch 1 reports Participant Order Trade events</i> | |
| 10 | Broker 1 executes the customer order from a proprietary account at the VWAP | <i>Broker 1 reports a Trade event</i> type: MEOT tradeKeyDate: 20180501T000000 tradeID: XYZ555 symbol: XYZ eventTimestamp: 20180501T153039.234556 manualFlag: false quantity: 10,000 price: 9.97 capacity: P tapeTradeID: TRF123 marketCenterID: DN buyDetails: orderKeyDate: 20180501T000000 orderID: O12345 side: B sellDetails: side: SL firmDesignatedID: PROP123 accountHolderType: P | The <i>buyDetails</i> reflect the details of customer order O12345. The <i>sellDetails</i> capture the FDID of the firm proprietary account from which the customer order was filled. If Broker 1 filled the customer order in a Riskless Principal capacity, Broker 1 would report MEOFs instead of an MEOT with a <i>fulfillmentLinkType</i> of 'Y'. <i>firmDetails</i> would be required to be populated with the <i>orderID</i> of the proprietary order from which the fill came. If Broker 1 filled the customer order from an existing position or using a disconnected OMS/EMS, the <i>fulfillmentLinkType</i> field would be populated with a value of 'YE' and <i>firmDetails</i> would be required. Broker 1 must populate the <i>firmDetails</i> with the <i>accountHolderType</i> and the FDID of the account from which the order was filled. |

2.3.12. Fill of a Single Customer Order from Multiple Representative Orders

This scenario illustrates the CAT reporting requirements when an Industry Member fills a customer order on from multiple representative orders. In this example, Industry Member Broker 1 generates three representative orders to facilitate the execution of a customer order, and routes each representative order to an exchange for execution. The representative orders are executed throughout the day, and the Industry Member fills the customer at an average price of the three representative orders.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of each representative order (New Order events)
- The route of each representative order to the exchange (Order Route events)
- The fill of the customer order from each representative order (Order Fulfillment event with three Order Fulfillment Supplement events)

Explicit linkage between the customer order and each representative order is required in the *aggregatedOrders* field on the representative MENO. On the Order Fulfillment event, since the customer order was filled from more than one representative order, the *fulfillmentLinkType* must be populated with a value of 'YS'. The *firmDetails* in the Order Fulfillment event must be blank, but the *firmDetails* for each representative order that was used to fill the customer order must be provided in a separate Order Fulfillment Supplement event.

2.4. Internal Route Scenarios

This section illustrates the CAT reporting requirements when an order is passed to a different department or desk within a *CATReporterIMID*. Refer to Section 4.5 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.4.1. Customer Order Internally Routed to another Desk and Subsequently Executed Against a Firm Proprietary Account

This scenario illustrates the CAT reporting requirements when an Industry Member internally routes a customer order from the Sales Desk to the Trading Desk, and the order is subsequently executed against a firm proprietary account. The Sales Desk and Trading Desk are separated by information barriers.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The internal route from the Sales Desk to the Trading Desk (Order Internal Route Accepted event)
- The principal execution (Trade event)

| # | Step | Reported Event | Comments |
|---|-------------------------------------|---|----------|
| 1 | Customer sends an order to Broker 1 | NA | |
| 2 | Broker 1 accepts the customer order | <i>Broker 1 (IMID = BRKA) reports a New Order event</i> type: MENO orderKeyDate: 20170801T000000 orderID: O12345 symbol: XYZ | |

2.4.2. Customer Order Internally Routed to Multiple Desks and Subsequently Executed

This scenario illustrates the CAT reporting requirements when an Industry Member internally routes a customer order from the Sales Desk to multiple desks within the Industry Member. Each destination desk subsequently fills the order against a firm proprietary account.

Industry Member Broker 1 is required to report the following for each desk:

- At the Sales Desk
 - ♦ The receipt of the customer order (New Order event)
- At the Trading Desk
 - ♦ The receipt of the internal route from the Sales Desk (Order Internal Route Accepted event)
 - ♦ The principal execution (Trade event)
- At the Arbitrage Desk
 - ♦ The receipt of the internal route from the Sales Desk (Order Internal Route Accepted event)

2.4.3. Internal Route and Execution, Leaves Quantity Routed Externally

This scenario illustrates the CAT reporting requirements when an Industry Member internally routes an order to another desk where it is partially executed. The remainder of the order is routed to another Industry Member for execution.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The receipt of the internal route from the Sales Desk (Order Internal Route Accepted event)
- The partial execution of the customer order (Trade event)
- The route of the remaining shares to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- Receipt of the order from Broker 1 (Order Accepted event)
- The execution of Broker 1's order (Trade event)

2.4.4. Order Received and Routed Manually, Electronically Captured at Subsequent Desk

This scenario illustrates the CAT reporting requirements when an order is received manually at a branch, then manually routed to the Trading Desk. Upon receipt, the Trading Desk immediately enters the order into an electronic order management system for further handling.

Industry Member Broker 1 is required to report:

- The manual receipt of the customer order (New Order event)
- The manual receipt and subsequent electronic entry of the internal route from the branch (Order Internal Route Accepted event)
- The electronic route of the order to the exchange (Order Route event)

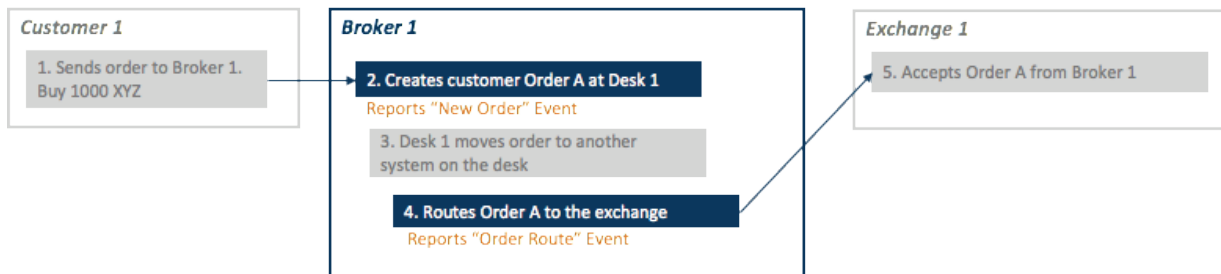

Industry Members are required to report both an *eventTimestamp* and an *electronicTimestamp* for orders that are received manually and subsequently entered into an electronic system. If the order was received and systematized simultaneously, the values for the *eventTimestamp* and the *electronicTimestamp* must be the same. If the order is not systematized, an *electronicTimestamp* is not required. Refer to [CAT FAQ G4](#) for additional information.

| # | Step | Reported Event | Comments |
|---|---|---|---|
| 1 | Customer calls an order to Broker 1 | NA | |
| 2 | The branch receives the customer order and manually creates an order ticket | <p>Broker 1 reports a <i>New Order event</i></p> <p>type: MENO orderKeyDate: 20180417T000000 orderID: O24680 symbol: XYZ eventTimestamp: 20180417T153015.00 manualFlag: true electronicTimestamp: deptType: O side: B price: 10.00 quantity: 1000 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG custDsplntrFlag: false firmDesignatedID: FDID00234 accountHolderType: A affiliateFlag: false negotiatedTradeFlag: false representativeInd: N</p> | <p>The <i>eventTimestamp</i> on the New Order event must capture the time at which the customer called Broker 1 in step 1 (with granularity to at least seconds).</p> <p><i>electronicTimestamp</i> is not required, since the order was never systematized by Broker 1 at the branch.</p> |
| 3 | The branch calls the order into the Trading Desk, which enters the order into an electronic system immediately upon receipt | <p>Broker 1 reports an <i>Order Internal Route Accepted event</i></p> <p>type: MEIR orderKeyDate: 20180417T000000 orderID: O24680 symbol: XYZ eventTimestamp: 20180417T153016.112345 manualFlag: true electronicTimestamp: 20180417T153016.112345 deptType: T receivingDeskType: T side: B price: 10.00 quantity: 1000 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG</p> | <p>In this example, the Trading Desk does not assign a new <i>orderID</i> to the Order Internal Route Accepted event.</p> <p>Since the Trading Desk received the order manually and subsequently entered the order into an electronic system, the Trading Desk is required to report both an <i>eventTimestamp</i> and an <i>electronicTimestamp</i>.</p> <p>However, since the Trading Desk simultaneously received and entered the order, the <i>eventTimestamp</i> and <i>electronicTimestamp</i> must reflect the same value.</p> |

2.4.5. Industry Member Utilizes Multiple Systems at One Desk

This scenario illustrates the CAT reporting requirements when an Industry Member has multiple trading systems utilized at a single desk. In this scenario, the desk transfers the order into another internal application used within the desk in order to route the order to an exchange. Since the desk handling the order does not change, the Industry Member is not required to report movement of an order between two systems within the same desk or department.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to the exchange (Order Route event)

| # | Step | Reported Event | Comments |

2.4.6. Order Internally Routed to another Desk and Subsequently Modified by a Customer

This scenario illustrates the CAT reporting requirements when an Industry Member internally routes a customer order from the Sales Desk to the Trading Desk, and the order is subsequently modified by the customer. In this scenario, the Sales Desk receives an order from a customer and routes the order to the Trading Desk, where the order is further routed to an exchange for execution. The customer subsequently sends an instruction to modify the price of the order. The Sales Desk modifies the customer order per the customer instruction, cancels the existing internal route to the Trading Desk, and sends a new internal route to the Trading Desk. The Trading Desk receives the new internal route from the Sales Desk, and further routes the modification to the exchange.

The reporting of this scenario depends on whether the Sales Desk modifies the parent order or cancels the internal route as described in the two options below.

Option 1:

In Option 1, the Sales Desk modifies the internal route that was sent to the Trading Desk.

Industry Member Broker 1 is required to report the following for each desk:

- At the Sales Desk
 - ♦ The receipt of the customer order (New Order event)
 - ♦ The receipt of the customer modification request (Order Modification Request event)
 - ♦ The confirmation of the customer Modification (Order Modified event)
- At the Trading Desk
 - ♦ The receipt of the internal route from the Sales Desk (Order Internal Route Accepted event)
 - ♦ The route of the order to the exchange (Order Route event)
 - ♦ The receipt of the modification request from the Sales Desk (Order Internal Route Modification Request event)
 - ♦ The modification of the route to the exchange (Route Modified event)
 - ♦ The confirmation of the internal route modification at the Trading Desk (Order Internal Route Modified event)

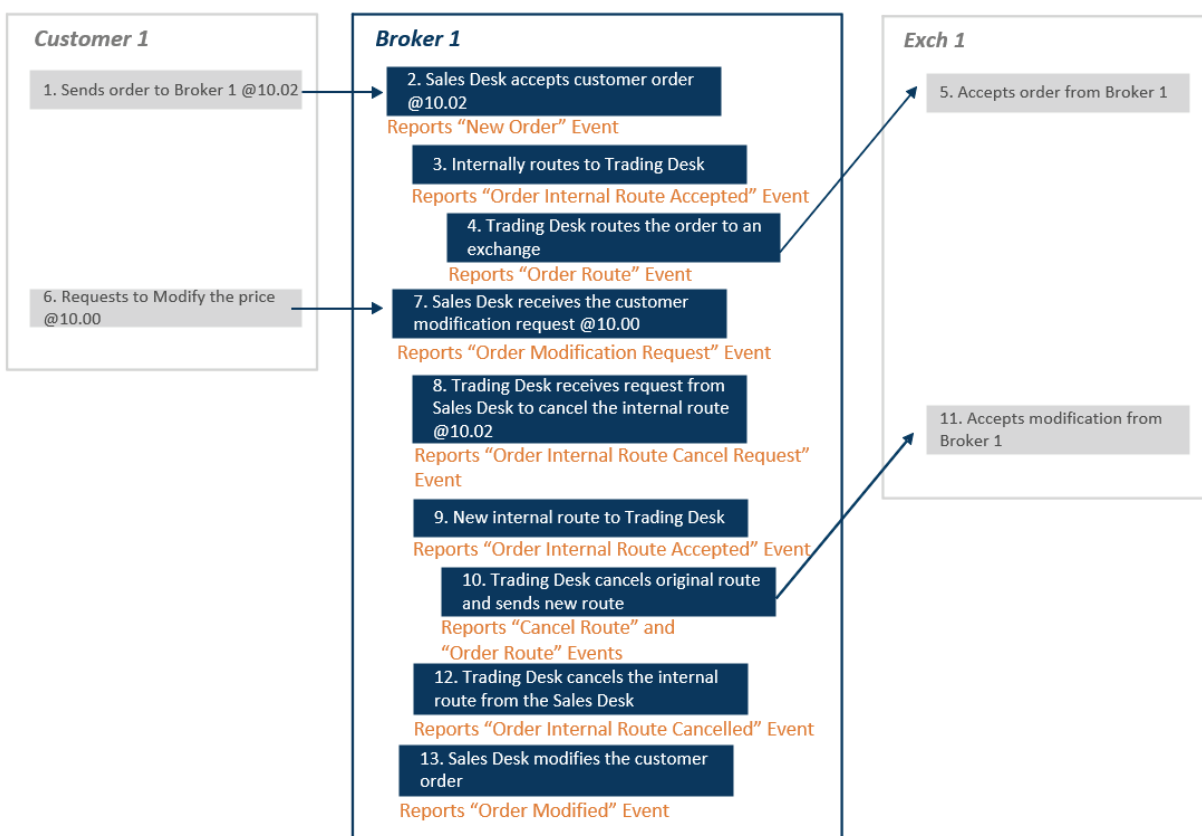

In its Order Modified event, the Sales Desk is required to capture the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the time acknowledgement is received from the Trading Desk. In its Order Internal Route Modified event, the Trading Desk is required to capture the time the internal route was modified (e.g., the time that the order was confirmed to

be modified in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the time acknowledgement is received from the exchange. In this example, the *eventTimestamp* on the modification events represents the time that acknowledgement was received.

The Sales Desk is also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. The Trading Desk is also required to capture the time that the request was received from the Sales Desk in the *requestTimestamp* field in the Order Internal Route Modified event, or in a separate Order Internal Route Modification Request event. In this example, the request time is captured using separate request events at each desk.

Option 2:

In Option 2, the Sales Desk sends a new internal route to the Trading Desk.

Industry Member Broker 1 is required to report the following for each desk:

- At the Sales Desk
 - ♦ The receipt of the customer order (New Order event)

- ♦ The receipt of the customer modification request (Order Modification Request event)
- ♦ The confirmation of the customer modification (Order Modified event)
- At the Trading Desk
 - ♦ The receipt of the first internal route from the Sales Desk (Order Internal Route Accepted event)
 - ♦ The route of the order to the exchange (Order Route event)
 - ♦ The request to cancel the first internal route from the Sales Desk (Order Internal Route Cancel Request event)
 - ♦ The cancellation of the original route to the exchange (Route Cancelled event)
 - ♦ The new route to the exchange (Order Route event)
 - ♦ The receipt of the second internal route from the Sales Desk (Order Internal Route Accepted event)
 - ♦ The confirmation of the cancellation of the first internal route from the Sales Desk (Order Internal Route Cancelled event)

In its Order Modified event, the Sales Desk is required to capture the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the time acknowledgement is received from the Trading Desk. In its Order Internal Route Cancelled event, the Trading Desk is required to capture the time the internal route was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the time acknowledgement is received from the exchange. In this example, the *eventTimestamp* on the modification/cancellation events represents the time that acknowledgement was received.

The Sales Desk is also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. The Trading Desk is also required to capture the time that the request was received from the Sales Desk in the *requestTimestamp* field in the Order Internal Route Cancelled event, or in a separate Order Internal Route Cancel Request event. In this example, the request time is captured using separate request events at each desk.

Option 1: Since an Order Modification Request event was reported, the <i>requestTimestamp</i> in the Order Modified event must be blank. |

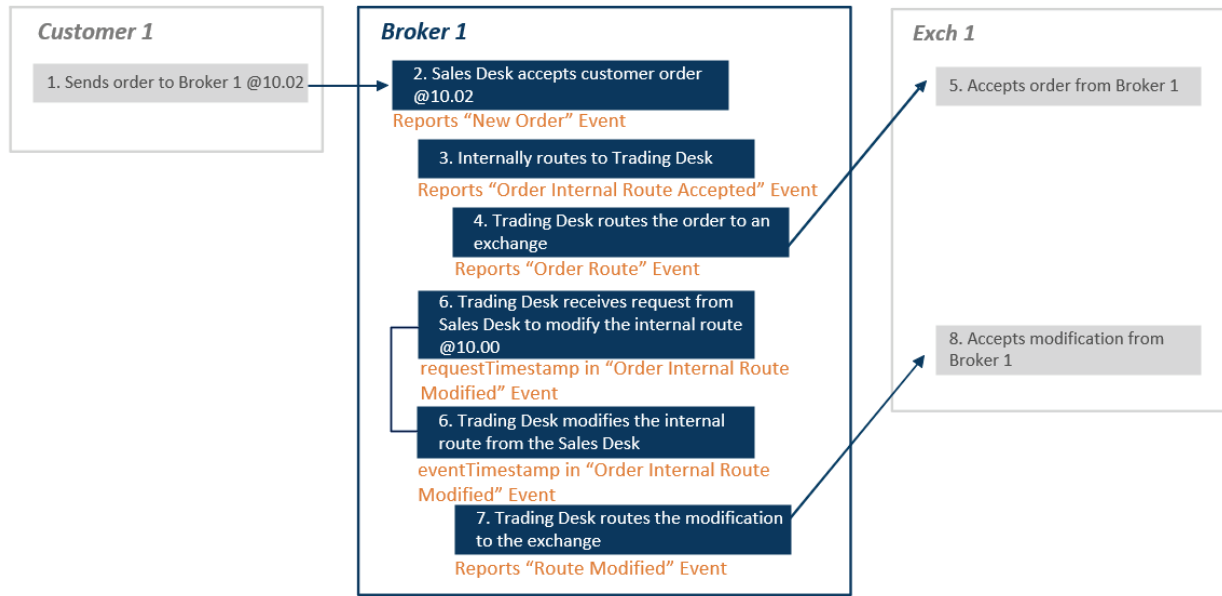

2.4.7. Order Internally Routed to another Desk and Subsequently Modified by the Firm

This scenario illustrates the CAT reporting requirements when an Industry Member internally routes a customer order from the Sales Desk to the Trading Desk, and the order is subsequently modified by the Sales Desk. In this scenario, the Sales Desk receives an order from a customer and routes the order to the Trading Desk, where the order is further routed to an exchange for execution. The Sales Desk subsequently modifies the price of the internal route to the Trading Desk. The Trading Desk receives the price modification from the Sales Desk, and further routes the modification to the exchange.

The reporting of this scenario depends on whether the Sales Desk modifies the internal route or cancels the internal route as described in the two options below.

Option 1:

In Option 1, the Sales Desk modifies the Internal Route that was sent to the trading desk.

Industry Member Broker 1 is required to report the following for each desk:

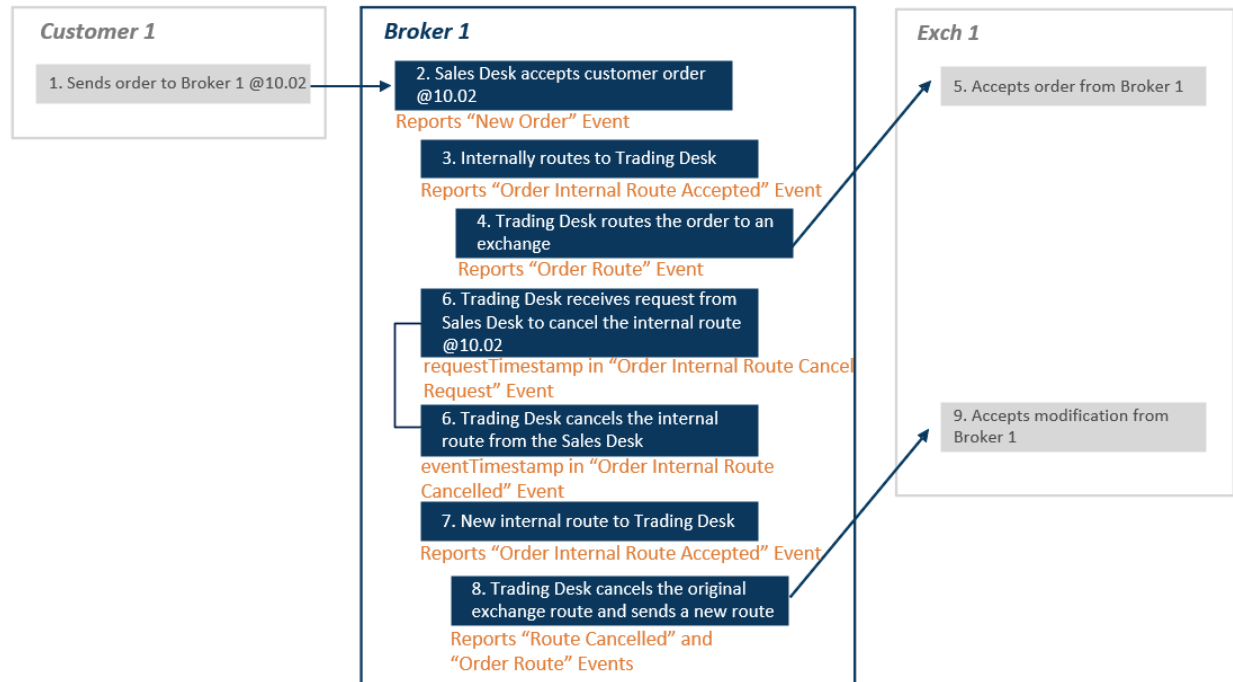

- At the Sales Desk
 - ♦ The receipt of the customer order (New Order event)
- At the Trading Desk
 - ♦ The receipt of the internal route from the Sales Desk (Order Internal Route Accepted event)
 - ♦ The route of the order to the exchange (Order Route event)
 - ♦ The receipt of the modification request from the Sales Desk (*requestTimestamp* in Order Internal Route Modified event)
 - ♦ The modification of the internal route from the Sales Desk (*eventTimestamp* in Order Internal Route Modified event)
 - ♦ The route of the modification to the exchange (Route Modified event)

In its Order Internal Route Modified event, the Trading Desk is required to capture the time the internal route was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the time acknowledgement is received from the exchange. In this example, the *eventTimestamp* in the Order Internal Route Modified event is the time that the request was received.

The Trading Desk is also required to capture the time that the request was received from the Sales Desk in the *requestTimestamp* field in the Order Internal Route Modified event, or in a separate Order Internal Route Modification Request event. In this example, the request time is captured using the *requestTimestamp* field in the Order Internal Route Modified event.

Option 2:

In Option 2, the Sales Desk cancels the original internal route and sends a new Internal Route to the Trading Desk.

Industry Member Broker 1 is required to report the following for each desk:

- At the Sales Desk
 - ♦ The receipt of the customer order (New Order event)
- At the Trading Desk
 - ♦ The receipt of the initial internal route from the Sales Desk (Order Internal Route Accepted event)
 - ♦ The route of the order to the exchange (Order Route event)
 - ♦ The receipt of the cancellation request from the Sales Desk for the original internal route (*requestTimestamp* in Order Internal Route Cancelled event)
 - ♦ The cancellation of the initial internal route from the Sales Desk (*eventTimestamp* Order Internal Route Cancelled event)
 - ♦ The receipt of a second internal route from the Sales Desk (Order Internal Route Accepted event)
 - ♦ The route of the order to the exchange (Order Route event)

In its Order Internal Route Cancelled event, the Trading Desk is required to capture the time the internal route was cancelled (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the

time acknowledgement is received from the exchange. In this example, the *eventTimestamp* in the Order Internal Route Cancelled event is the time that the request was received.

The Trading Desk is also required to capture the time that the request was received from the Sales Desk in the *requestTimestamp* field in the Order Internal Route Cancelled event, or in a separate Order Internal Route Cancel Request event. In this example, the request time is captured using the *requestTimestamp* field in the Order Internal Route Cancelled event.

2.4.8. Order Internally Routed to Multiple Desks and Subsequently Cancelled by a Customer

This scenario illustrates the CAT reporting requirements when an Industry Member internally routes a customer order to multiple desks, and the order is subsequently cancelled by the customer.

In this scenario, the Sales Desk receives an order from a customer and routes the order to Trading Desk 1, who further routes the order to Trading Desk 2, where the order is further routed to an exchange for execution. The customer subsequently sends an instruction to cancel the order. Since the Sales Desk

knows that Trading Desk 2 is holding the order, the cancellation is communicated directly to Trading Desk 2 by the Sales Desk, and is not communicated to Trading Desk 1. Trading Desk 1 does not have an obligation to report an Order Internal Route Cancelled event since it did not receive the cancellation instruction.

Industry Member Broker 1 is required to report the following for each desk:

- At the Sales Desk
 - ♦ The receipt of the customer order (New Order event)
 - ♦ The receipt of the customer request (Order Cancel Request event)
 - ♦ The confirmation of the customer cancellation (Order Cancelled event)
- At Trading Desk 1
 - ♦ The receipt of the internal route from the Sales Desk (Order Internal Route Accepted event)
- At Trading Desk 2
 - ♦ The receipt of the internal route from Trading Desk 1 (Order Internal Route Accepted event)
 - ♦ The receipt of the request from the Sales Desk (Order Internal Route Cancel Request event)
 - ♦ The confirmation of the cancellation of the internal route from the Sales Desk (Order Internal Route Cancelled event)

In its Order Cancelled event, the Sales Desk is required to capture the time the order was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the time acknowledgement is received from the Trading Desk. In its Order Internal Route Cancelled event, the Trading Desk is required to capture the time the internal route was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the time acknowledgement is received from the exchange. In this example, the *eventTimestamp* on the cancellation events represents the time that acknowledgement was received.

The Sales Desk is also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. Trading Desk 2 is also required to capture the time that the request was received from the Sales Desk in the *requestTimestamp* field in the Order Internal Route Modified event, or in a separate Order Internal Route Modification Request event. In this example, the request time is captured using separate request events at each desk.

2.4.9. Order is Received from Another Broker-Dealer and Internally Routed, Subsequent Modification is Requested Directly at the Desk Holding the Order

This scenario illustrates the CAT reporting requirements when an Industry Member receives an order from another broker-dealer at the Sales Desk, and internally routes the order to a Trading Desk upon receipt. The broker-dealer that sent the order then requests a modification directly at the Trading Desk.

Since the modification was requested directly at the Trading Desk, the Sales Desk does not have an obligation to report the receipt or confirmation of the modification.

Industry Member Broker 1 is required to report the following:

- The origination of a proprietary order (New Order event)
- Route of the order to Broker 2 (Order Route event)
- The confirmation of the modification (Order Modified event)
- The modification of the route sent to Broker 2 (Route Modified event)

Industry Member Broker 2 is required to report the following for each desk:

- At the Sales Desk
 - ♦ The receipt of the order from Broker 1 (Order Accepted event)
- At the Trading Desk
 - ♦ The receipt of the internal route from the Sales Desk (Order Internal Route Accepted event)
 - ♦ The receipt of the modification request from Broker 1 (*requestTimestamp* in Order Modified event)
 - ♦ The confirmation of the modification (*eventTimestamp* in Order Modified event)

Since the modification was received from another Broker-Dealer, the Trading Desk at Broker 2 must report an Order Modified event in order to capture the route linkage criteria, including the *routedOrderID* of the route received from Broker 1. If the modification was received from a non-broker dealer and route linkage criteria is not required, Broker 2 may report either an Order Modified event or an Order Internal Route Modified event.

In its Order Modified events, the Broker 1 and Broker 2 are required to capture the time the order was Modified (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). Depending on the firm's order flow, this may be the same time the request is received, or this may be the time acknowledgement is received. In this example, the *eventTimestamp* on the Order Modified event for Broker 2 represents the time the request was received from Broker 1. The *eventTimestamp* on the Order Modified event for Broker 1 represents the time that acknowledgement was received.

The Trading Desk is required to separately report the receipt of Broker 1's request to modify the order either through the *requestTimestamp* in its Order Modified event or through a separate Order Modification Request event.

2.5. Order Modification Scenarios

This section illustrates the CAT reporting requirements when the Material Terms of an order have been changed, or when an order is cancel/replaced. Refer to Section 4.7 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

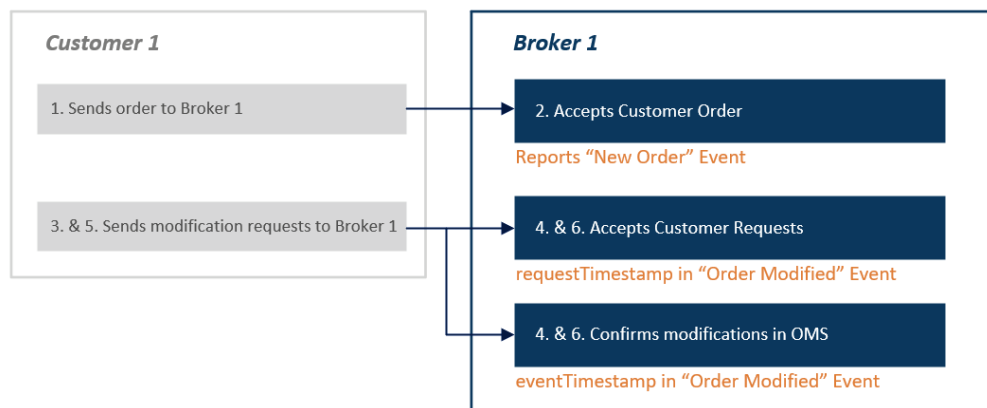

2.5.1. Customer Order and Modifications

This scenario illustrates the CAT reporting requirements when a customer places an order with an Industry Member and modifies the order multiple times.

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). Industry Members are also required to capture the time that the request was received from the customer either in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event, as illustrated in Options 1 and 2 below. In this example, the *eventTimestamp* reflects the same time that the request was received from the customer.

Based on its order handling practices, the Industry Member may choose to assign a new Order Key to its Order Modified events by assigning a new *orderID*. In addition to illustrating the use of the *requestTimestamp* field, Option 1 illustrates how a modification must be reported when a new Order Key is not assigned. In addition to illustrating the use of the Order Modification Request event, Option 2 illustrates how a modification must be reported when a new Order Key is assigned.

Option 1:

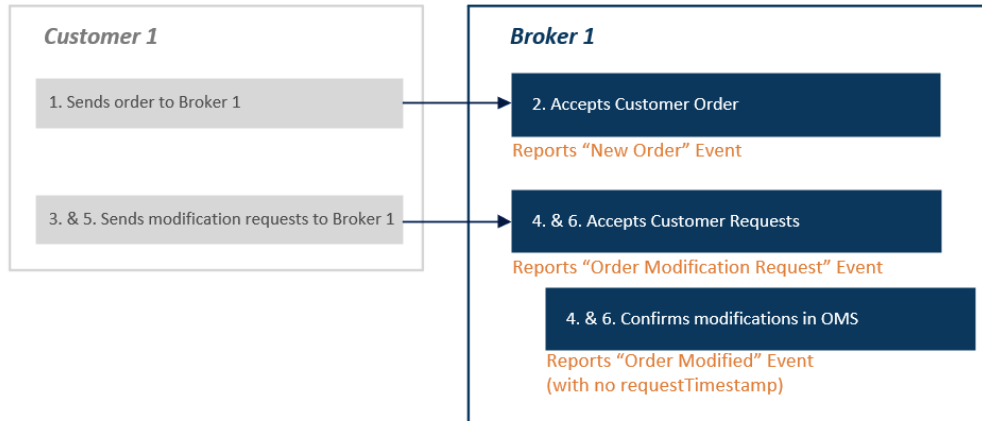

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The receipt of the customer modification requests (*requestTimestamp* in Order Modified event)
- The confirmation of the customer modification (*eventTimestamp* in Order Modified event)

Since Broker 1 is populating the *requestTimestamp* field in the Order Modified event, an Order Modification Request event must not be reported.

Option 2:

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The receipt of the customer modification requests (Order Modification Request events)
- The confirmation of the customer modification (Order Modified event)

Since Broker 1 is reporting a separate Order Modification Request event in this example, the *requestTimestamp* in the Order Modified event must be blank.

Note that, since the change to the order was only to the limit price, an MEOJ event could have alternatively been used to report the customer order modification. |

2.5.2. Customer Requested Modification of an Order Previously Routed to an Exchange

This scenario illustrates the CAT reporting requirements when a customer requests a modification on an order that the Industry Member had previously routed to an exchange.

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* reflects the time that acknowledgement was received from the exchange. Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. In this scenario, the modification is reflected using the *requestTimestamp* in the Order Modified event.

For the exchange route portion of the scenario, the Industry Member may report either a modification of the route that was sent to the exchange or the cancellation of the original route that was sent to the exchange followed by a new route based on its order handling practices, as illustrated in Options 1 and 2 below.

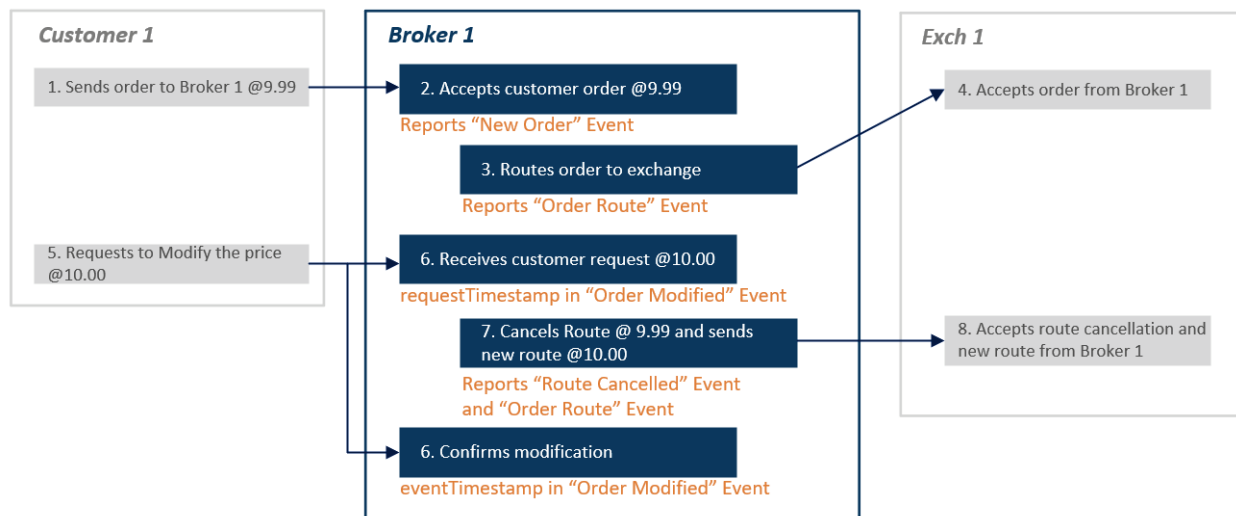

Option 1:

Industry Member Broker 1 is required to report:

- The receipt of customer order (New Order event)
- The route to the exchange (Order Route event)
- The receipt of the customer modification request (*requestTimestamp* in Order Modified event)
- The confirmation of the customer modification (*eventTimestamp* in Order Modified event)
- The modification of the route of the modification to the exchange (Route Modified event)

Option 2:

Industry Member Broker 1 is required to report:

- The receipt of customer order (New Order event)
- The route to the exchange (Order Route event)

- The receipt of the customer modification request (*requestTimestamp* in Order Modified event)
- The confirmation of the customer modification (*eventTimestamp* in Order Modified event)
- The cancellation of the original route of the modification to the exchange (Route Cancelled event)
- The route of the modification to the exchange (Order Route event)

2.5.3. Customer Requested Modification of Order Previously Routed to another Industry Member

This scenario illustrates the CAT reporting requirements when a customer requests a modification on an order that was previously routed to another Industry Member.

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* for Broker 1 reflects the time that acknowledgement was received from Broker 2, and the *eventTimestamp* for Broker 2 reflects the same time that the request was received from Broker 1. Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. In this example, Broker 1 reports a separate Order Modified and Order Modification Request events, and Broker 2 reports an Order Modified event using the *requestTimestamp* field.

For the interfirm route portion of the scenario, Industry Member Broker 1 routing the order may report either a modification of the route that was sent or the cancellation of the original route that was sent to Broker 2 followed by a new route based on its order handling practices, as illustrated in Options 1 and 2 below.

Option 1:

Industry Member Broker 1 is required to report:

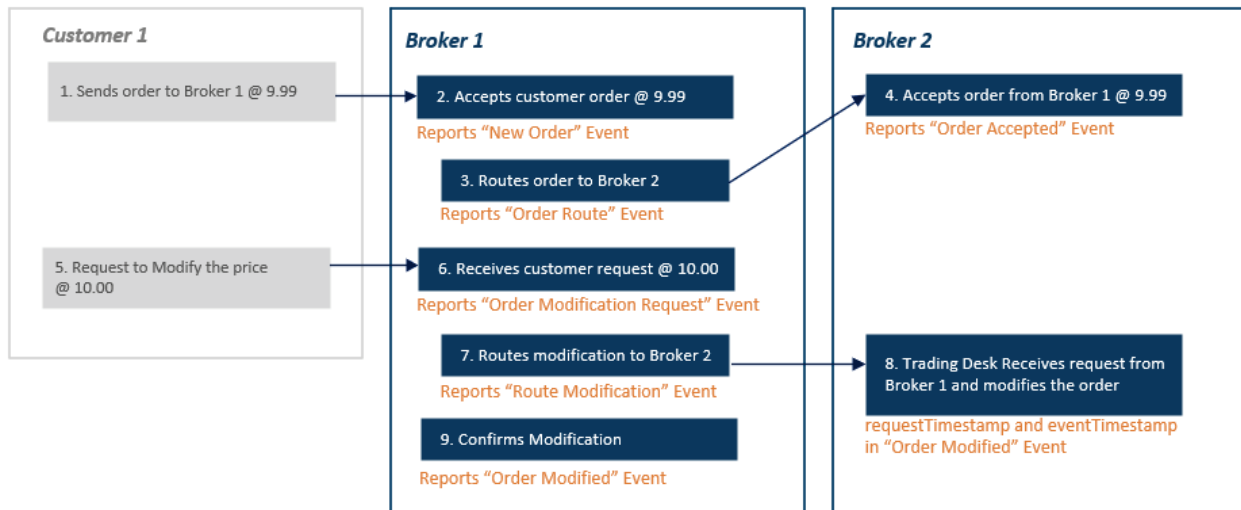

- The receipt of the customer order (New Order event)
- The route of the order to Broker 2 (Order Route event)
- The receipt of the customer modification request (*requestTimestamp* in Order Modified event)
- The confirmation of the customer modification (*eventTimestamp* in Order Modified event)

- The modification of the route of the modification to Broker 2 (Route Modified event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The receipt of the modification request from Broker 1 (*requestTimestamp* in Order Modified event)
- The confirmation of the modification (*eventTimestamp* in Order Modified event)

Option 2:

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Broker 2 (Order Route event)
- The receipt of the customer modification request (*requestTimestamp* in Order Modified event)
- The confirmation of the customer modification (*eventTimestamp* in Order Modified event)
- The cancellation of the original route of the modification to Broker 2 (Route Cancelled event)
- The route of the modification to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The receipt of the modification request from Broker 1 (*requestTimestamp* in Order Modified event)
- The confirmation of the modification (*eventTimestamp* in Order Modified event)

2.5.4. System Driven Modification of Previously Routed Order

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order with instructions to handle the order using a specific proprietary trading algorithm.² The Industry Member routes the order using its trading algorithm to another Industry Member, and then the trading algorithm modifies the route. In this scenario, since the order modification was initiated by the trading algorithm, the routing Industry Member Broker 1 is required to report a Route Modified event.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event with *handlingInstructions* of 'ALG')
- The route of the order to Broker 2 (Order Route event)
- The modification of the route by the trading algorithm (Route Modified event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The receipt of the customer modification request (*requestTimestamp* in Order Modified event)
- The confirmation of the customer modification (*eventTimestamp* in Order Modified event)

Refer to [CAT FAQ D29](#) for information on populating *handlingInstructions* for orders received or originated with instructions to work the order using a trading algorithm.

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* for Broker 2 reflects the same time that the request was received from Broker 1. Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate

² Trading Algorithm is defined in Appendix F of [the CAT Reporting Technical Specifications for Industry Members \("Technical Specifications"\)](#)

Order Modification Request event. In this example, Broker 2 reports the *requestTimestamp* field in its Order Modified event.

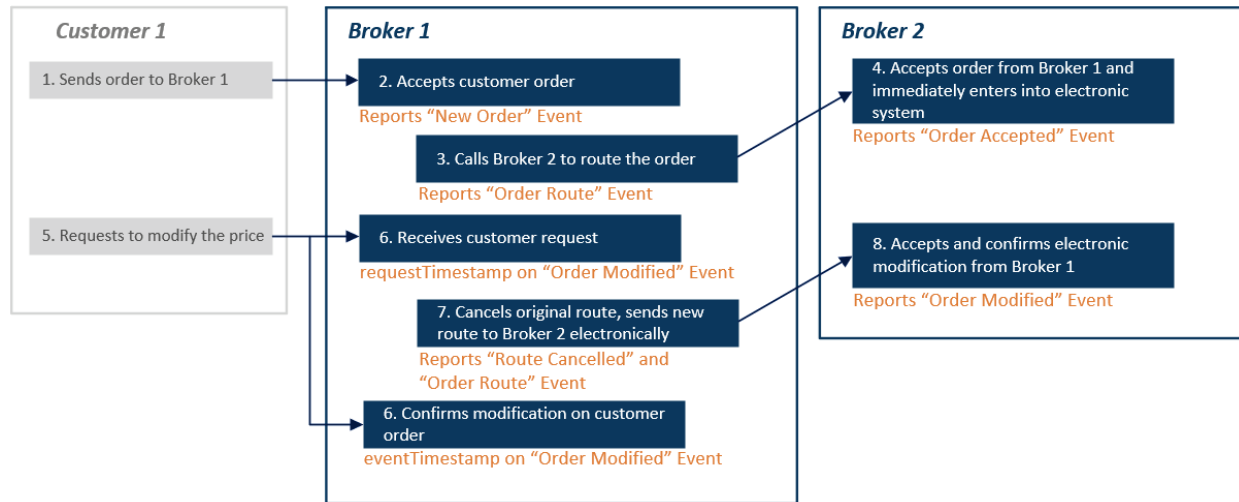

| # | Step | Reported Event | Comments |
|---|--|--|---|
| 1 | Customer sends a Buy order to Broker 1 with instructions to handle the order using a trading algorithm | NA | |
| 2 | Broker 1 accepts the customer order | <p>Broker 1 reports a <i>New Order event</i></p> <p>type: MENO orderKeyDate: 20180417T000000 orderID: O23456 symbol: XYZ eventTimestamp: 20180417T143035.234456 manualFlag: false deptType: A side: B price: 9.99 quantity: 1000 orderType: LMT timeInForce: DAY=20180417 handlingInstructions: ALG tradingSession: REG custDsplntrFlag: false firmDesignatedID: PR001 accountHolderType: A affiliateFlag: false negotiatedTradeFlag: false representativeInd: N</p> | Broker 1 is required to populate the value of 'ALG' in the <i>handlingInstructions</i> field to indicate that the order was received with instructions to handle using a specific proprietary trading algorithm. |
| 3 | Broker 1's trading algorithm determines to route 500 shares of the order to Broker 2 | <p>Broker 1 reports an <i>Order Route event</i></p> <p>type: MEOR orderKeyDate: 20180417T000000 orderID: O23456 symbol: XYZ eventTimestamp: 20180417T143035.234556 manualFlag: false senderIMID: 123:FRMA destination: 456:FRMB destinationType: F routedOrderID: AO222 side: B</p> | In this example, Broker 1 must not populate the value of 'ALG' in the <i>handlingInstructions</i> field, as this route was generated based on the trading algorithm, and is not being sent to a destination with instructions to use a trading algorithm. |

Broker 2 may alternatively capture the request time using a separate Order Modification Request event.</p> |

2.5.5. Manual Route, Followed by an Electronic Modification

This scenario illustrates reporting requirements when an Industry Member routes an order manually, then sends an electronic message to modify the Material Terms of the order.

Industry Member Broker 1 is required to report:

- The electronic receipt of the customer order (New Order event)
- The manual route of the order to Broker 2 (Order Route event)
- The electronic customer modification (Order Modified event)
- The cancellation of the original Order Route event (Route Cancelled event)
- The electronic route of the modification order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The manual receipt of the route from Broker 1 (Order Accepted event)
- The electronic modification from Broker 1 (Order Modified event)

Industry Members are required to report both an *eventTimestamp* and an *electronicTimestamp* for orders that are received manually and subsequently entered into an electronic system. If the order was received and systematized simultaneously, the values for the *eventTimestamp* and the *electronicTimestamp* must be the same. If the order is not systematized, an *electronicTimestamp* is not required. Refer to [CAT FAQ G4](#) for additional information.

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* for Broker 1 reflects the time that acknowledgement was received from Broker 2, and the *eventTimestamp* for Broker 2 reflects the same time that the request

was received from Broker 1. Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. In this example, the request time is captured in the *requestTimestamp* field on the Order Modified events.

2.5.6. Modification to an Order Previously Routed to an Exchange that requires the use of the Original Routed Order ID

This scenario illustrates CAT reporting requirements when an Industry Member routes an order to an exchange that requires the use of the original Routed Order ID for a modification to an order that was

previously routed to that exchange. This scenario is only applicable to orders modified and resent to exchanges with a requirement to reuse the Routed Order ID. In these instances, the routing firm must designate on the Order Route event that the Routed Order ID is duplicated.

This reporting scenario applies to orders originated by the firm as well as orders received from customers and from other Industry Members. The example documented in this scenario represents an order originated by the firm.

Industry Member Broker 1 is required to report:

- The origination of a principal order (New Order event)
- The route to an exchange (Order Route event)
- The order modification (Order Modified event) The modification of the exchange route (Route Modified event)

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* for Broker 1 reflects the time that acknowledgement was received from the exchange.

2.5.7. Modification of a Multi-day Order

This scenario illustrates the CAT reporting requirements when a customer places an order with an Industry Member and modifies the order on a subsequent day.

Industry Member Broker 1 is required to report:

- The receipt of the customer order on T (New Order event)
- The receipt of the customer modification request on T+1 (*requestTimestamp* in Order Modified event)
- The confirmation of the customer modification on T+1 (*eventTimestamp* in Order Modified event)

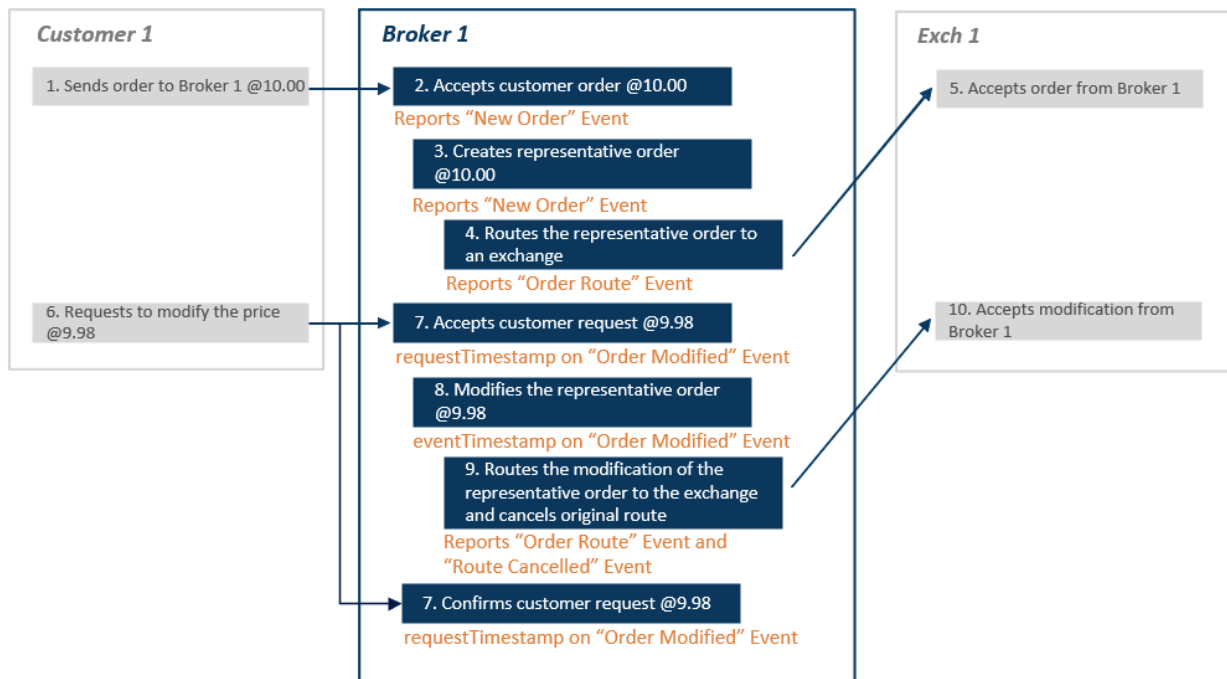

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. In this example, the *eventTimestamp* reflects the same time that the request was received from the customer. In this example, the request time is captured in the *requestTimestamp* field on the Order Modified events.

Broker 1 may alternatively capture the request time using a separate Order Modification Request event. |

2.5.8. Modification of a Customer Order Resulting in a Modification to the Corresponding Representative Order

This scenario illustrates the CAT reporting requirements when a customer modifies an order, which results in a modification to the corresponding representative order. In this example, Industry Member Broker 1 generates a representative order to facilitate the execution of a customer order, and routes the order to an exchange for execution. The customer subsequently modifies the limit price on its order, and Broker 1 updates the limit price on its corresponding representative order.

Industry Member Broker 1 is required to report the following for the Customer Order:

- The receipt of the customer order (New Order event)
- The receipt of the customer modification request (*requestTimestamp* in Order Modified event)

- The confirmation of the modification of the representative order (*eventTimestamp* in Order Modified Event)

Industry Member Broker 1 is required to report the following for the Representative Order:

- The generation of a representative order (New Order event)
- The route of the representative order to an exchange (Order Route event)
- The route of the modification to the exchange (Order Route event)
- The cancellation of the original route to the exchange (Route Cancelled event)
- The confirmation of the customer modification (*eventTimestamp* in Order Modification event)

Explicit linkage between the customer order and the representative order is required through the *aggregatedOrders* field on the representative New Order event.

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* in both MEOM events reported by Broker 1 reflects the time that acknowledgement was received from the exchange. Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event. In this example, the request time is captured in the *requestTimestamp* field on the Order Modified events.

2.6. Cancellation Scenarios

This section illustrates the CAT reporting requirements when an order is fully or partially cancelled. Refer to Section 4.10 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

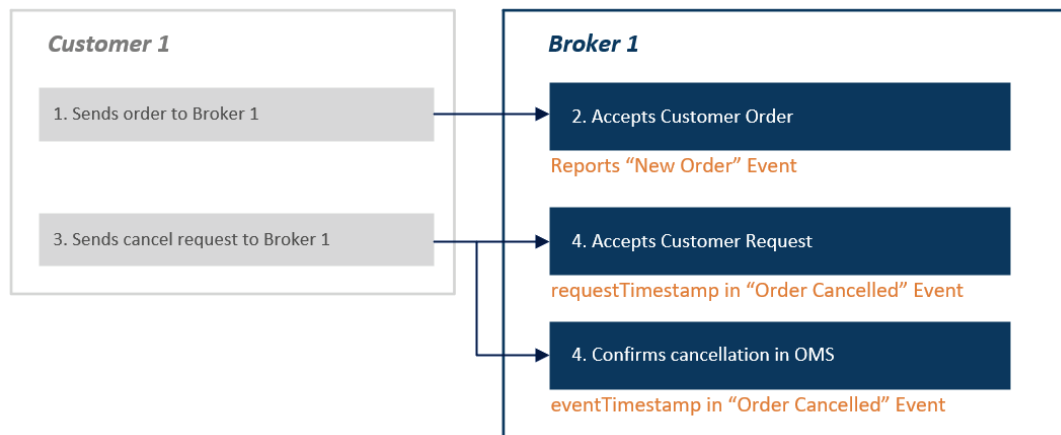

2.6.1. Full cancellation of a Customer Order

This scenario illustrates the CAT reporting requirements when a customer cancels an order placed with an Industry Member on the same day that it was created.

Industry Members are required to capture the *eventTimestamp* in Order Cancelled events reflecting the time the order was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). Industry Members are also required to capture the time that the request was received from the customer either in the *requestTimestamp* field in the Order Cancelled event, or in a separate Order Cancel Request event, as illustrated in Options 1 and 2 below. In this example, the *eventTimestamp* reflects the same time that the request was received from the customer.

For illustration purposes, actions taken by the Broker between the receipt of the original order and the cancellation are not included.

Option 1:

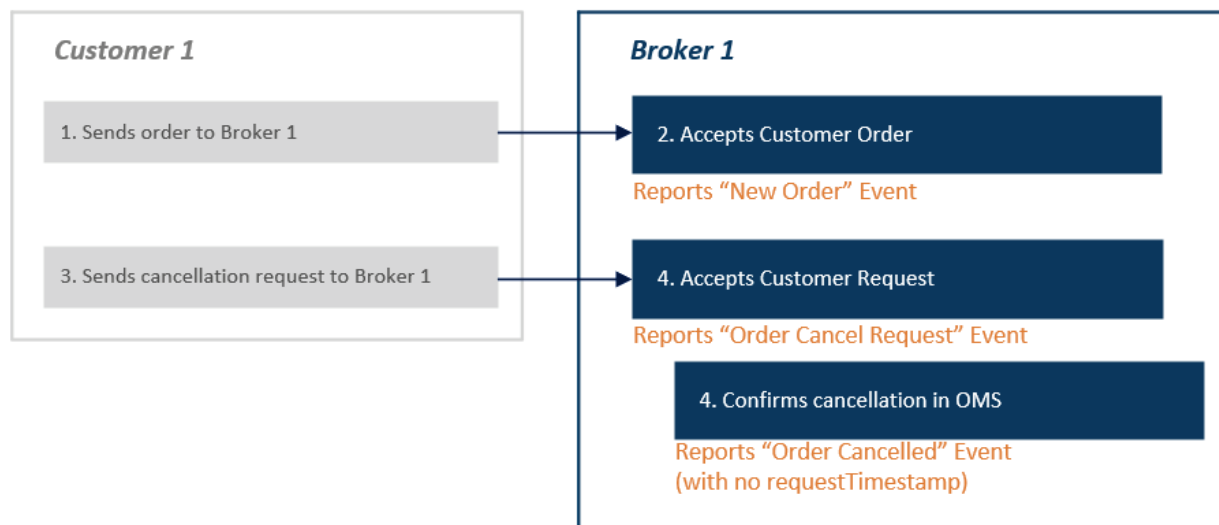

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The receipt of the customer cancellation request (*requestTimestamp* in Order Cancelled event)
- The confirmation of the cancellation (*eventTimestamp* in Order Cancelled event)

Since Broker 1 is populating the *requestTimestamp* field in the Order Cancelled event, an Order Cancel Request event must not be reported.

Option 2:

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The receipt of the customer Cancellation request (Order Cancel Request event)
- The confirmation of the cancellation (Order Cancelled event)

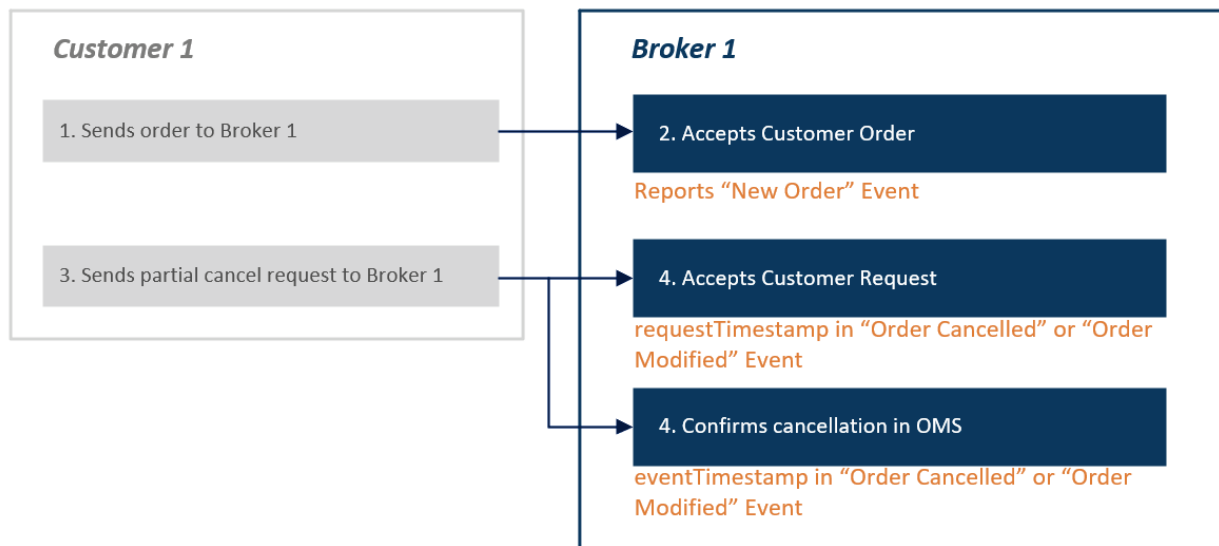

Since Broker 1 is reporting a separate Order Cancel Request event in this example, the *requestTimestamp* in the Order Modified event must be blank.

| # | Step | Reported Event | | Comments |
|---|---|---|--|--|

2.6.2. Partial Cancellation of an Order

The following scenario illustrates the CAT reporting requirements when a customer partially cancels an order placed with an Industry Member on the same day that it was created. The Industry Member may report the partial cancellation using either an Order Cancelled event or an Order Modified event.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The receipt of the customer's partial cancellation request (*requestTimestamp* in Order Cancelled or Order Modified event)

- The confirmation of the partial cancellation (*eventTimestamp* in Order Cancelled or Order Modified event)

Based on its order handling practices, the Industry Member may choose to report this activity to CAT using either an Order Cancelled event or an Order Modified event. The steps shown below illustrate this activity must be reported in scenarios where an Order Cancelled event is reported (Option 1), and in scenarios where an Order Modified event is reported (Option 2).

Industry Members are required to capture the *eventTimestamp* in Order Cancelled/Modified events reflecting the time the order was cancelled/modified (e.g., the time that the order was confirmed to be cancelled/modified in the firm's OMS/EMS). Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Cancelled/Modified event, or in a separate Order Cancel/Modification Request event. In this example, the *eventTimestamp* reflects the same time that the request was received from the customer. In this example, the request time is captured in the *requestTimestamp* field on the Order Modified events.

|---|---|---|---|---|
| 4 | Broker 1 receives the customer request and partially cancels the order per the customer's instruction | <u>OPTION 1</u> <i>Broker 1 reports an Order Cancelled event</i> type: MEOC orderKeyDate: 20180417T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180417T153036.123456 manualFlag: false cancelQty: 400 leavesQty: 600 initiator: C requestTimestamp: 20180417T153036.123456 | <u>OPTION 2</u> <i>Broker 1 reports an Order Modified event</i> type: MEOM orderKeyDate: 20180417T000000 orderID: O12345 symbol: XYZ priorOrderID: O12345 priorOrderKeyDate: 20180417T000000 eventTimestamp: 20180417T153036.123456 manualFlag: false receiverIMID: senderIMID: senderType: routedOrderID: initiator: C side: B price: 10.00 quantity: 600 leavesQty: 600 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG custDsplntrFlag: false representativeInd: N requestTimestamp: 20180417T153036.123456 | In this example, the receipt time of the customer request is captured in the <i>requestTimestamp</i> field on the Order Cancelled/Modified event. Broker 1 may alternatively capture the request time using a separate Order Cancel/Modification Request event. |

2.6.3. Partial Cancellation of a Partially Executed Order

The following scenario illustrates the CAT reporting requirements when a customer reduces the shares quantity on an order that has been partially executed. The Industry Member may choose to report the partial cancellation using either an Order Cancelled event or an Order Modified event based on its order handling practices.

In this scenario, Industry Member Broker 1 receives a customer order for 1,000 shares, and routes the order to an exchange for execution. Broker 1 receives a partial execution of 200 shares on the exchange, then receives an instruction from the customer to reduce the shares quantity by 200 shares. Broker 1 receives another partial execution for 200 shares, then receives an instruction from the customer to reduce the quantity of the order to 400 shares, leaving the customer order as fully executed.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route to the exchange (Order Route event)
- The receipt of the customer's partial cancellation request (*requestTimestamp* in Order Cancelled or Order Modified event)
- The modification or cancellation of the order previously routed to the exchange (Route Cancelled or Route Modified event)
- The confirmation of the partial cancellation (*eventTimestamp* in Order Cancelled or Order Modified event)

Based on its order handling practices, the Industry Member may choose to report this activity using Order Cancelled events or Order Modified events. The steps shown below illustrate this activity must be reported in scenarios where an Order Cancelled event is reported (Option 1), and in scenarios where an Order Modified event is reported (Option 2).

Industry Members are required to capture the *eventTimestamp* in Order Cancelled/Modified events reflecting the time the order was cancelled/modified (e.g., the time that the order was confirmed to be cancelled/modified in the firm's OMS/EMS). Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Cancelled/Modified event, or in a separate Order Cancel/Modification Request event. In this example, the

eventTimestamp reflects the time that acknowledgement was received from the exchange. In this example, the request time is captured in the *requestTimestamp* field on the Order Modified events.

2.6.4. Industry Member Cancels an Order Previously Routed to Another Industry Member

This scenario illustrates the CAT reporting requirements when a customer cancels an order that was previously routed to another Industry Member.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to Broker 2 (Order Route event)
- The customer cancellation request (Order Cancel Request event)
- The cancellation of the route to Broker 2 (Route Cancelled event)
- The confirmation of the cancellation (Order Cancelled event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)

- The receipt of the cancellation request from Broker 1 (*requestTimestamp* in Order Cancelled event)
- The cancellation of the order (*eventTimestamp* in Order Cancelled event)

Industry Members are required to capture the *eventTimestamp* in Order Cancelled events reflecting the time the order was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). In this example, the *eventTimestamp* for Broker 1 reflects the time that acknowledgement was received from Broker 2, and the *eventTimestamp* for Broker 2 reflects the time that the request was received from the customer. Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Cancelled/Modified event, or in a separate Order Cancel/Modification Request event. In this example, the request time is captured in the *requestTimestamp* field on the Order Modified events. In this example, Broker 1 reports a separate Order Cancelled and Order Cancel Request events, and Broker 2 reports an Order Cancelled event using the *requestTimestamp* field.

2.6.5. Industry Member Cancels a Route to Another Industry Member

This scenario illustrates the CAT reporting requirements when an Industry Member cancels a route that was sent to another Industry Member. In this scenario, Industry Member Broker 1 routes an order to Industry Member Broker 2. Broker 1 then cancels the route that was sent to Broker 2 and routes the order to Broker 3 where the order is executed.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to Broker 2 (Order Route event)
- The cancellation of the route to Broker 2 (Route Cancelled event)
- The route of the customer order to Broker 3 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The receipt of the cancellation request from Broker 1 (*requestTimestamp* in Order Cancelled event)
- The cancellation of Broker 1's order (*eventTimestamp* in Order Cancelled event)

Industry Member Broker 3 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of Broker 1's order (Trade event)

In this scenario, Broker 1 cancelled the route that was sent to Broker 2, the customer order remained open in Broker 1's books and records, and the order was further routed to Broker 3. Therefore, Broker 1 is required to report the cancellation of the route that was sent to Broker 2 using a Route Cancelled event. This guidance would also apply if Broker 1 routed the order to an exchange as opposed to another broker-dealer.

Since the order in Broker 2's books and records is fully cancelled, Broker 2 is required to report the cancellation of the order to CAT. Industry Members are required to capture the *eventTimestamp* in Order Cancelled/Modified events reflecting the time the order was cancelled/modified (e.g., the time that the order was confirmed to be cancelled/modified in the firm's OMS/EMS). Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Cancelled/Modified event, or in a separate Order Cancel/Modification Request event. In this example, the *eventTimestamp* reflects the time that acknowledgement was received from the exchange. In this example, the request time is captured in the *requestTimestamp* field on the Order Modified events.

2.6.6. Firm Initiated Cancellation of a Customer Order

This scenario illustrates the CAT reporting requirements when an Industry Member cancels an order received from another Industry Member. In this scenario, Industry Member Broker 1 routes an order to Industry Member Broker 2. Broker 2 later cancels the order that it received from Broker 1 due to market conditions.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The cancellation of Broker 1's order (Order Cancelled event)

Since the cancellation was initiated by Broker 2, Broker 1 is not required to report a Route Cancelled event to CAT reflecting that the route was cancelled by Broker 2. Broker 1 is required to report any subsequent actions taken on the order as a result of the unsolicited cancellation by Broker 2, including if Broker 1 ultimately cancelled the order, or if Broker 1 routed the order to another destination.

Industry Members are required to capture the *eventTimestamp* in Order Cancelled events reflecting the time the order was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). In this example, the *eventTimestamp* reflects the time that Broker 2 cancelled the order on its books and records. Broker 2 is not required to report a receipt time, as the cancellation was not requested by Broker 1 and was initiated by the firm.

2.6.7. Customer Requests to Cancel an Order that has Already Been Fully Executed

This scenario illustrates the CAT reporting requirements when an Industry Member attempts to cancel an order that has already been fully executed. In this scenario, Industry Member Broker 1 receives a customer order, and routes the order to Broker 2 for execution. The customer subsequently requests to cancel the order, but the order was fully executed before the cancellation was initiated by the customer.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to Broker 2 (Order Route event)
- The receipt of the cancellation request from the customer (Order Cancel Request event)
- Cancellation of the route to Broker 2 (Route Cancelled event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of Broker 1's order (Trade event)

In accordance with [CAT FAQ B42](#), Broker 2 is not required to report an Order Cancel Request event in Phase 2d, since the request was received after the order was fully executed and was terminal at Broker 2. However, this activity may be required in future phases of CAT. If Broker 2 chooses to optionally report an Order Cancel Request event, it will not be rejected by CAT in accordance with [CAT FAQ P14](#).

2.6.8. Unsolicited Cancellation of a Customer Order by an Exchange

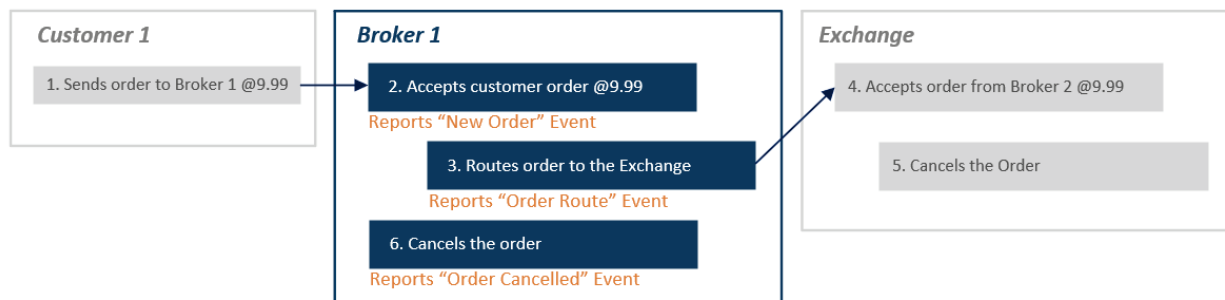

This scenario illustrates the CAT reporting requirements when an Industry Member routes a customer order to an exchange, and the exchange cancels the order without receiving an explicit cancel request. In this scenario, Industry Member Broker 1 receives a customer order, and routes the order to an exchange for execution. The exchange accepts the order, then cancels the order without receiving an explicit cancel request. Note that there is a distinction from implicit cancels, such as IOC orders or DFD messages. In these cases, Industry Members are not required to report a cancellation because it is implied by the circumstances.

Since the cancellation was initiated by the exchange, Broker 1 is not required to report a Route Cancelled event. Broker 1 is required to report any action that it takes on the order as a result of the unsolicited cancellation, including a cancellation of the order on its own books and records, as outlined in Option 1.

If the order remains open on Broker 1's books and records after receipt of the unsolicited cancellation, Broker 1 must report any subsequent action on the order, such as a route to another venue, as outlined in Option 2.

Option 1:

Upon cancellation by the exchange, Broker 1 cancels the order on its books and records.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the customer order to the exchange (Order Route event)
- The cancellation of the customer order (Order Cancelled event)

Industry Members are required to capture the *eventTimestamp* in Order Cancelled events reflecting the time the order was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's

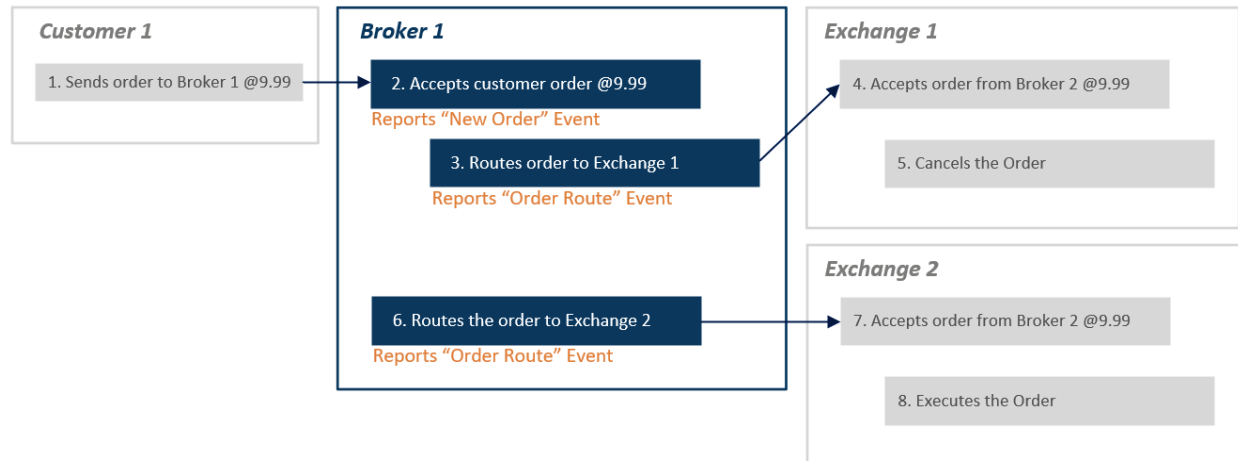

OMS/EMS). In this example, the *eventTimestamp* reflects the time that Broker 1 cancelled the order on its books and records after receiving the exchange cancellation. Broker 1 is not required to report a receipt time, as the cancellation was not requested by the customer.

| # | Step | Reported Event | Comments |
|---|---|---|----------|
| 1 | Customer sends an order to Broker 1 | NA | |
| 2 | Broker 1 accepts the customer order | <p><i>Broker 1 reports a New Order event</i></p> <p> type: MENO orderKeyDate: 20180417T000000 orderID: O23456 symbol: XYZ eventTimestamp: 20180417T143035.234456 manualFlag: false deptType: T side: B price: 9.99 quantity: 1000 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG custDsplntrFlag: false firmDesignatedID: INS001 accountHolderType: A affiliateFlag: false negotiatedTradeFlag: false representativeInd: N </p> | |

Option 2:

Upon cancellation by the exchange, Broker 1 routes the order to another venue.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Exchange 1 (Order Route event)
- The route of the order to Exchange 2 (Order Route event)

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* reflects the time that Broker 1 modified the order on its books and records after receiving the exchange cancellation. Broker 1 is not required to report a receipt time, as the modification was not requested by the customer.

2.7. ATS Reporting Scenarios

This section illustrates the CAT reporting requirements for ATSs. Refer to Section 3.1 of the [CAT Reporting Technical Specifications for Industry Members](#) and [Section H of the CAT FAQs regarding ATSs](#) for additional information.

2.7.1. ATS Cross with One Order on Each Side

This scenario illustrates the CAT reporting requirements when a firm's ATS receives two Industry Member subscriber orders and crosses them.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the ATS (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the ATS (Order Route event)

Industry Member ATS A is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The receipt of the order from Broker 2 (Order Accepted event)
- The Cross of Broker 1's order with Broker 2's order (Trade event)

2.7.2. ATS Cross with Multiple Orders on One Side

This scenario illustrates the CAT reporting requirements when an ATS matches as agent the orders of multiple customers on one side with the order of one customer on the other side. If the matches occur in a single execution or a "single event" (e.g., with the press of a button or pursuant to an automated execution algorithm), and the transaction is reported to the tape as a single transaction (e.g., a single cross), the ATS must report an MEOT event, followed by subsequent MEOTS events.

Sequential executions, even those occurring very close in time, would not be considered a single event and must be reported as separate MEOTs.

This scenario illustrates reporting requirements when using an MEOTS event.

Industry Member Broker 1 is required to report:

- The receipt of Customer 4's order (New Order event)
- The route of the order to the ATS (Order Route event)

Industry Member ATS A is required to report:

- The receipt of Customer 1's order (New Order event)
- The receipt of Customer 2's order (New Order event)
- The receipt of Customer 3's order (New Order event)
- The receipt of Broker 1's order (Order Accepted event)
- Matching of Broker 1's order with Customer 1's Order, Customer 2's Order and Customer 3's Order, and execution (Trade event)
- Side Details of Customer 1's Order (Trade Supplement Event)
- Side Details of Customer 2's Order (Trade Supplement Event)
- Side Details of Customer 3's Order (Trade Supplement Event)

2.7.4. Order Modification of a PEG Order

This scenario illustrates how an Order Adjusted Event is reported when either a display ATS or a non-display ATS reprices a peg order.

In accordance with [CAT FAQ H1](#), each time an Industry Member reprices a peg order based on a market move (i.e., when there is a change in the national best bid or offer or the best bid or offer on a particular exchange, as applicable based on the terms of the order), the Industry Member must report a price modification of the peg order to the CAT pursuant to Section 6.3(d) of the CAT NMS Plan, as applied to Industry Members by Section 6.4(d)(i) of the CAT NMS Plan, if the price is modified.

If the Industry Member does not reprice a peg order when the market moves, the Industry Member does not need to report a modification of the peg order to the CAT since the order was not modified by either the customer or the Industry Member. For example, for both displayed and non-displayed alternative trading systems (ATSs), if an ATS's matching engine reprices a peg order when the market moves, the price modification must be reported to the CAT. If a matching engine does not reprice a peg order when the market moves, there is no requirement to report a price modification to the CAT.

In this scenario, Industry Member Broker 1 routes a customer midpoint PEG order to ATS A. ATS A gives the order a working price upon receipt. Then the NBBO changes while the order stays open on the book. The ATS reprices the order, which must be reported to CAT.

Industry Member Broker 1 is required to report:

- The receipt of customer order (New Order event)
- The route of the order to the ATS (Order Route event)

Industry Member ATS A is required to report:

- The receipt of the PEG order from Broker 1 (Order Accepted event)
- The modification of the price due to NBBO changes (Order Adjusted Event)

Since only a price change is being reported, ATS A is required to represent the current state of all price fields in its Order Adjusted event. The quantity fields are not required.

The quantity fields are not required.</p> <p>The initiator flag is populated with a value of 'F', as the firm modified the order based on an implicit customer instruction. Refer to CAT FAQ B63 for additional information.</p> |

2.7.5. Receipt of PEG Order, Followed by Change in NBBO with No Modification on the Order

In accordance with [CAT FAQ H1](#), each time an Industry Member reprices a peg order based on a market move (i.e., when there is a change in the national best bid or offer or the best bid or offer on a particular exchange, as applicable based on the terms of the order), the Industry Member must report a price modification of the peg order to the CAT pursuant to Section 6.3(d) of the CAT NMS Plan, as applied to Industry Members by Section 6.4(d)(i) of the CAT NMS Plan, if the price is modified.

If the Industry Member does not reprice a peg order when the market moves, the Industry Member does not need to report a modification of the peg order to the CAT since the order was not modified by either the customer or the Industry Member. For example, for both displayed and non-displayed alternative trading systems (ATSs), if an ATS's matching engine reprices a peg order when the market moves, the price modification must be reported to the CAT. If a matching engine does not reprice a peg order when the market moves, there is no requirement to report a price modification to the CAT.

In this scenario, an ATS receives a buy order with a primary peg instruction and a limit price of \$10. The order is not displayable or routable and the ATS has no sell orders that are eligible to trade with the buy order. The NBB subsequently moves to 9.99 and the ATS receives no other sell orders that are eligible to trade with the buy order. The ATS takes no action on the open buy order when the NBB moves to 9.99, therefore there is no CAT reportable event.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the ATS (Order Route event)

Industry Member ATS A report:

- The receipt of the PEG order from Broker 1 (Order Accepted Event)

The ATS must capture the NBBO, the source of NBBO, as well as a timestamp indicating the time that the NBBO was captured. |
| 5 | The NBBO changes | NA | The NBBO changes to 9.99 x 10.03 |
| 6 | The ATS does not re-price the order | NA | Since the ATS did not re-price the order, an MEOJ is not required. |

2.7.6. Crossing of PEG Order after a Change in NBBO with No Modification on the Order

In accordance with [CAT FAQ H1](#), each time an Industry Member reprices a peg order based on a market move (i.e., when there is a change in the national best bid or offer or the best bid or offer on a particular exchange, as applicable based on the terms of the order), the Industry Member must report a price modification of the peg order to the CAT pursuant to Section 6.3(d) of the CAT NMS Plan, as applied to Industry Members by Section 6.4(d)(i) of the CAT NMS Plan, if the price is modified.

If the Industry Member does not reprice a peg order when the market moves, the Industry Member does not need to report a modification of the peg order to the CAT since the order was not modified by either the customer or the Industry Member. For example, for both displayed and non-displayed alternative trading systems (ATSs), if an ATS's matching engine reprices a peg order when the market moves, the price modification must be reported to the CAT. If a matching engine does not reprice a peg order when the market moves, there is no requirement to report a price modification to the CAT.

In this scenario, An ATS receives a buy order with mid-point peg instruction when the NBBO is 9.85 x 10. The order is not displayable or routable and the ATS has no sell orders that are eligible to trade with the buy order. The NBBO subsequently moves to 9.90 x 10. The ATS then receives a market order to sell that is eligible to trade with the buy order and the two orders are crossed at 9.95. Because the ATS did not re-price the buy order prior to executing it, there is no CAT reportable event required to reflect a price modification of the buy order to 9.95.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the ATS (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the ATS (Order Route event)

Industry Member ATS A must report:

- The receipt of the PEG order from Broker 1 (Order Accepted event)
- The receipt of the Market order from Broker 2 (Order Accepted event)
- The Cross of Broker 1's order with Broker 2's order (Trade event)

2.7.7. Display Modifications of a Display ATS

Display modifications can be reported to CAT using the Order Adjusted event. This scenario illustrates the CAT reporting requirements when an order is partially executed on an ATS, and as a result the display size of the order changes. In this scenario, an order is routed to an ATS for execution.

This example illustrates the display modification reporting, and does not reflect subsequent order handling.

Industry Member Broker 1 is required to report:

- Receipt of the customer order (New Order event)

- The route of the order to ATS A (Order Route event)

Industry Member ATS A is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The partial execution of the order (Trade event)
- The update to the display size post execution (Order Adjusted event)

Since only a quantity change is being reported, ATSA is required to represent the current state of all quantity fields in its Order Adjusted event. The price fields are not required.

The price fields are not required.</p> |

2.8. OTC Reporting Scenarios

This section illustrates the CAT reporting requirements for OTC securities. Refer to [Section J of the CAT FAQs regarding OTC Securities](#) for additional information.

2.8.1. Trade Negotiated over the Phone

This scenario illustrates the CAT reporting requirements when a Market Maker executes an order as the result of a negotiation with another Industry Member over the phone. In this scenario, Broker 2 calls Market Maker 1 and negotiates a trade. Market Maker 1 reports its side of the trade to the ORF as the executing party, and Broker 2 reports its side of the trade to the ORF as the contra party. The two sides of the trade are matched by the ORF and sent for clearing.

Industry Member Market Maker 1 is required to report the following:

- A proprietary new buy order (New Order event)
- An execution linking to its ORF trade report (Trade event)

Industry Member Broker 2 is required to report the following:

- A new proprietary sell (New Order event)
- An execution linking to its ORF trade report (Trade event)

All of the New Order and Trade events occurring as a result of the negotiation must have the *negotiatedTradeFlag* and *sideDetailsInd* fields present and marked properly. Both Trade events reported by Market Maker 1 and Broker 2 must link to their ORF report.

The negotiation between Market Maker 1 and Broker 2 is not reportable to CAT.

| # | Step | Reported Event | Comments |

2.8.2. Trade Executed as a Result of an OTC Link ATS Message

This scenario illustrates the CAT reporting requirements when a Market Maker (IMID:MMA) executes an order after receiving an OTC Link Message from another Industry Member (IMID:BRKB).

In this scenario, Market Maker 1 is quoting symbol XYZ on OTC Link ATS to buy 1,000 shares at 1.15. OTC Link ATS subscriber and Industry Member Broker 2 sends an OTC Link ATS message electronically (i.e. via FIX) to Market Maker 1 indicating that the price is not negotiable. Market Maker 1 executes the trade (3,000 shares at 1.14), and reports the trade to the ORF.

For the quote sent to OTC Link ATS:

- Market Maker 1 is required to report the following:
 - ♦ The origination of the quote (New Quote event)
 - ♦ The route of the quote to OTC Link ATS (Routed Quote event)
- OTC Link ATS is required to report the following:
 - ♦ Receipt of the quote from Market Maker 1 (Quote Received event)

For the order sent from Broker 2 to Market Maker 1 via OTC Link ATS based on the posted quote:

- Broker 2 is required to report the following:
 - ♦ The origination of a new proprietary order to sell 3,000 shares @1.15 (New Order event)
 - ♦ The route of the order to Market Maker 1 via OTC Link ATS (Order Route event to OTC Link ATS with *handlingInstructions* value 'DLVT=MMA' and 'NCTR')
- OTC Link ATS is required to report the following:
 - ♦ The receipt of the order from Broker 2 (Order Accepted event with a *handlingInstructions* value of 'DLVT=MMA' and 'NCTR')
 - ♦ The route of the order to Market Maker 1 (Order Route event with a *handlingInstructions* value of 'DLVF=BRKB' and 'NCTR', and a *quoteID* linking to the related MEQR event)
- Market Maker 1 is required to report the following:
 - ♦ The order received from Broker 2 via OTC Link ATS (Order Accepted event from OTC Link ATS with *handlingInstructions* value 'DLVF=BRKB' and 'NCTR')
 - ♦ The execution of the order from the firm's prop account (Trade event linking to the ORF report)

On Order Route events to OTC Link ATS, along with the corresponding Order Accepted event received by OTC Link ATS, a *handlingInstructions* value of 'DLVT' must be populated indicating the IMID of the

party the route is being delivered to. On Order Accepted events received from OTC Link ATS, along with the corresponding Order Route event sent by OTC Link ATS, a *handlingInstructions* value of 'DLVF' must be populated indicating the IMID of the party the route is being delivered from. Orders where the price is not negotiable must be marked with a *handlingInstructions* value of 'NCTR'.

If a route is sent from an Industry Member to a quote posted by a market maker, OTC Link ATS must populate the *quoteID* of the related Quote Received event in its Order Route event. The *quoteID* is not required to be populated on events representing counter messages that were not directed to a posted quote.

2.8.3. Trade Executed as a Result of an OTC Link ATS Counter Message

This scenario illustrates the CAT reporting requirements when an Industry Member executes an order after receiving an OTC Link Counter Message from another Industry Member.

In this scenario, Market Maker 1 (IMID:MMA) is quoting symbol XYZ on OTC Link ATS to buy 1,000 shares at 1.15. OTC Link ATS subscriber and Industry Member Broker 2 (IMID:BRKB) sends an OTC Link ATS message electronically (i.e. via FIX) to Market Maker 1 indicating that the price is negotiable. Broker 2 ultimately accepts a counteroffer from Market Maker 1, executes the trade (3,000 shares at 1.14), and reports the trade to the ORF.

For the quote sent to OTC Link ATS:

- Market Maker 1 is required to report the following:
 - ♦ The origination of the quote (New Quote event)
 - ♦ The route of the quote to OTC Link ATS (Routed Quote event)
- OTC Link ATS is required to report the following:
 - ♦ Receipt of the quote from Market Maker 1 (Quote Received event)

For the order sent from Broker 2 to Market Maker 1 via OTC Link ATS based on the posted quote:

- Broker 2 is required to report the following:
 - ♦ The origination of a new proprietary order to sell 3,000 shares @1.15 (New Order event)
 - ♦ The route of the order to Market Maker 1 via OTC Link ATS (Order Route event to OTC Link ATS with *handlingInstructions* value 'DLVT=MMA')
- OTC Link ATS is required to report the following:
 - ♦ The receipt of the order from Broker 2 (Order Accepted event with a *handlingInstructions* value of 'DLVT=MMA')
 - ♦ The route of the order to Market Maker 1 (Order Route event with a *handlingInstructions* value of 'DLVF=BRKB', and a *quoteID* linking to the related MEQR event)
- Market Maker 1 is required to report the following:

- ♦ The order received from Broker 2 via OTC Link ATS (Order Accepted event from OTC Link ATS with *handlingInstructions* value 'DLVF=BRKB')
- ♦ The decline of the message received from Broker 2 (Order Cancelled event)

For the counter sent from Market Maker 1 to Broker 2 via OTC Link ATS:

- Market Maker 1 is required to report the following:
 - ♦ The origination of a new proprietary order to sell 3,000 shares @ 1.14 (New Order event with *handlingInstructions* value 'CTR')
 - ♦ The route of the order to Broker 2 via OTC Link ATS (Order Route event to OTC Link ATS with *handlingInstructions* value 'DLVT=BRKB' and 'CTR')
- OTC Link ATS is required to report the following:
 - ♦ The receipt of the order from Market Maker 1 (Order Accepted event with a *handlingInstructions* value of 'DLVT=BRKB' and 'CTR')
 - ♦ The route of the order to Broker 2 (Order Route event with a *handlingInstructions* value of 'DLVF=MMA' and 'CTR')
- Broker 2 is required to report the following:
 - ♦ The receipt of the order via OTC Link ATS (Order Accepted event from OTC Link ATS with *handlingInstructions* values 'DLVF=MMA' and 'CTR')
 - ♦ The execution of the order from the firm's prop account (Trade event linking to the ORF report)

On Order Route events to OTC Link ATS, along with the corresponding Order Accepted event received by OTC Link ATS, a *handlingInstructions* value of 'DLVT' must be populated indicating the IMID of the party the route is being delivered to. On Order Accepted events received from OTC Link ATS, along with the corresponding Order Route event sent by OTC Link ATS, a *handlingInstructions* value of 'DLVF' must be populated indicating the IMID of the party the route is being delivered from.

Messages that are received and declined by an Industry Member must be captured as an Order Cancelled event. If no action is taken on the message, or the message is received and left to expire, an Order Cancelled event is not required.

Orders that are originated and routed via OTC Link ATS as a counter message must contain a *handlingInstructions* value of 'CTR', along with the related Order Accepted and Order Route event reported by OTC Link ATS, and the Order Accepted event by the Industry Member receiving the counter message.

If a route is sent from an Industry Member to a quote posted by a market maker, OTC Link ATS must populate the *quoteID* of the related Quote Received event in its Order Route event. The *quoteID* is not

required to be populated on events representing counter messages that were not directed to a posted quote.

2.8.4. Customer Order Executed as a Result of an OTC Link ATS Message

This scenario illustrates the CAT reporting requirements when a Market Maker (IMID:MMA) receives a customer order then submits an unsolicited displayed (bid) quote to OTC Link Message, and the order is executed as a result of an OTC Link Message received from another Broker-Dealer (IMID:BRKB).

In this scenario, Market Maker 1 receives a customer order and submits an unsolicited displayed quote in symbol XYZ on OTC Link ATS to buy 1,000 shares at 1.15 based on the customer order. OTC Link ATS subscriber and Industry Member Broker 2 sends an OTC Link ATS message electronically (i.e. via FIX) to trade at the quoted price. Market Maker 1 executes the trade and reports the trade to the ORF.

For the quote sent to OTC Link ATS:

- Market Maker 1 is required to report the following:
 - ♦ The origination of the quote (New Quote event)
 - ♦ The route of the quote to OTC Link ATS (Routed Quote event)

- OTC Link ATS is required to report the following:
 - ♦ Receipt of the quote from Market Maker 1 (Quote Received event)

For the customer order and the order sent from Broker 2 to Market Maker 1 via OTC Link ATS based on the posted quote:

- Broker 2 is required to report the following:
 - ♦ The origination of a new proprietary order to sell 3,000 shares @1.15 (New Order event)
 - ♦ The route of the order to Market Maker 1 via OTC Link ATS (Order Route event to OTC Link ATS with *handlingInstructions* value 'DLVT=MMA')
- OTC Link ATS is required to report the following:
 - ♦ The receipt of the order from Broker 2 (Order Accepted event with a *handlingInstructions* value of 'DLVT=MMA')
 - ♦ The route of the order to Market Maker 1 (Order Route event with a *handlingInstructions* value of 'DLVF=BRKB', and a *quoteID* linking to the related MEQR event)
- Market Maker 1 is required to report the following:
 - ♦ The receipt of the customer order (New Order event)
 - ♦ The order received from Broker 2 via OTC Link ATS (Order Accepted event from OTC Link ATS with *handlingInstructions* value 'DLVF=BRKB')
 - ♦ The execution of the customer order against the order from Broker 2 (Trade event linking to the ORF report)

On Order Route events to OTC Link ATS, along with the corresponding Order Accepted event received by OTC Link ATS, a *handlingInstructions* value of 'DLVT' must be populated indicating the IMID of the party the route is being delivered to. On Order Accepted events received from OTC Link ATS, along with the corresponding Order Route event sent by OTC Link ATS, a *handlingInstructions* value of 'DLVF' must be populated indicating the IMID of the party the route is being delivered from.

If a route is sent from an Industry Member to a quote posted by a market maker, OTC Link ATS must populate the *quoteID* of the related Quote Received event in its Order Route event. The *quoteID* is not required to be populated on events representing counter messages that were not directed to a posted quote.

2.8.5. Representative Order Executed as a Result of an OTC Link Message

This scenario illustrates the CAT reporting requirements when a Market Maker (IMID:MMA) receives a customer order and chooses to handle the customer order by generating a representative order to facilitate the execution. The Market Maker then submits an unsolicited displayed (bid) quote to OTC Link Message, and the order is executed as the result of an OTC Link Message received from another Broker-Dealer (IMID:BRKB). In this scenario, the customer order is filled on a Riskless Principal basis.

In this scenario, Market Maker 1 receives a customer order, and generates a representative order to facilitate the execution. Market Maker 1 submits an unsolicited displayed quote in symbol XYZ on OTC Link ATS to buy 1,000 shares at 1.15 based on the customer order. OTC Link ATS subscriber and Industry Member Broker 2 sends an OTC Link ATS message electronically (i.e. via FIX) to trade at the quoted price. Market Maker 1 executes the trade and reports the trade to the ORF, then fills the customer order.

For the quote sent to OTC Link ATS:

- Market Maker 1 is required to report the following:
 - ♦ The origination of the quote (New Quote event)
 - ♦ The route of the quote to OTC Link ATS (Routed Quote event)
- OTC Link ATS is required to report the following:
 - ♦ Receipt of the quote from Market Maker 1 (Quote Received event)

For the customer order, representative order, and the order sent from Broker 2 to Market Maker 1 via OTC Link ATS based on the posted quote:

- Broker 2 is required to report the following:
 - ♦ The origination of a new proprietary to sell 3,000 shares @1.15 (New Order event)
 - ♦ The route of the order to Market Maker 1 via OTC Link ATS (Order Route event to OTC Link ATS with *handlingInstructions* value 'DLVT=MMA')
- OTC Link ATS is required to report the following:
 - ♦ The receipt of the order from Broker 2 (Order Accepted event with a *handlingInstructions* value of 'DLVT=MMA')
 - ♦ The route of the order to Market Maker 1 (Order Route event with a *handlingInstructions* value of 'DLVF=BRKB', and a *quoteID* linking to the related MEQR event)
- Market Maker 1 is required to report the following:
 - ♦ The receipt of the customer order (New Order event)
 - ♦ The generation of a representative order (New Order event)

- ♦ The order received from OTC Link ATS via Broker 2 (Order Accepted event from OTC Link ATS with *handlingInstructions* value 'DLVF=BRKB')
- ♦ The execution of the representative order against the order from Broker 2 (Trade event linking to the ORF report)
- ♦ The fill of the customer order from the representative order (Order Fulfillment event)

On Order Route events to OTC Link ATS, along with the corresponding Order Accepted event received by OTC Link ATS, a *handlingInstructions* value of 'DLVT' must be populated indicating the IMID of the party the route is being delivered to. On Order Accepted events received from OTC Link ATS, along with the corresponding Order Route event sent by OTC Link ATS, a *handlingInstructions* value of 'DLVF' must be populated indicating the IMID of the party the route is being delivered from.

If a route is sent from an Industry Member to a quote posted by a market maker, OTC Link ATS must populate the *quoteID* of the related Quote Received event in its Order Route event. The *quoteID* is not required to be populated on events representing counter messages that were not directed to a posted quote.

Reporting requirements for representative orders in OTC securities are the same as for NMS securities. Refer to Appendix C of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.8.6. Fill of a Customer Order at a Previously Displayed Quote

This scenario illustrates the CAT reporting requirements when a Market Maker (IMID:MMA) displays a quote unrelated to any customer order flow. The Industry Member Broker 2 (IMID:BRKB) creates a proprietary order and sends a trade message to Market Maker 1. Before the proprietary order is executed, Broker 2 receives a customer order.

In this scenario, Market Maker 1 is quoting symbol XYZ on OTC Link ATS to buy 1,000 shares at 1.15. OTC Link ATS subscriber and Industry Member Broker 2 sends an OTC Link ATS message electronically (i.e. via FIX) to Market Maker 1 to trade at the posted quote. After sending the order, Broker 2 receives a customer order to sell 1,000 shares at 1.15. Market Maker 1 executes the trade (1,000 shares at 1.15), and reports the trade to the ORF. Broker 2 then fills the customer order.

For the quote sent to OTC Link ATS:

- Market Maker 1 is required to report the following:
 - ♦ The origination of the quote (New Quote event)
 - ♦ The route of the quote to OTC Link ATS (Routed Quote event)
- OTC Link ATS is required to report the following:
 - ♦ Receipt of the quote from Market Maker 1 (Quote Received event)

For the customer order and the order sent from Broker 2 to Market Maker 1 via OTC Link ATS based on the posted quote:

- Broker 2 is required to report the following:
 - ♦ The origination of a new proprietary order to sell 3,000 shares @1.15 (New Order event)
 - ♦ The route of the order to Market Maker 1 via OTC Link ATS (Order Route event to OTC Link ATS with *handlingInstructions* value 'DLVT=MMA')
 - ♦ The receipt of the customer order (New Order event)
 - ♦ The fill of the customer order (Order Fulfillment event)
- OTC Link ATS is required to report the following:
 - ♦ The receipt of the order from Broker 2 (Order Accepted event with a *handlingInstructions* value of 'DLVT=MMA')
 - ♦ The route of the order to Market Maker 1 (Order Route event with a *handlingInstructions* value of 'DLVF=BRKB', and a *quoteID* linking to the related MEQR event)
- Market Maker 1 is required to report the following:
 - ♦ The order received from Broker 2 via OTC Link ATS (Order Accepted event from OTC Link ATS with *handlingInstructions* value 'DLVF=BRKB')

- ♦ The execution of Broker 2's order from a prop account (Trade event linking to the ORF report)

On Order Route events to OTC Link ATS, along with the corresponding Order Accepted event received by OTC Link ATS, a *handlingInstructions* value of 'DLVT' must be populated indicating the IMID of the party the route is being delivered to. On Order Accepted events received from OTC Link ATS, along with the corresponding Order Route event sent by OTC Link ATS, a *handlingInstructions* value of 'DLVF' must be populated indicating the IMID of the party the route is being delivered from.

If a route is sent from an Industry Member to a quote posted by a market maker, OTC Link ATS must populate the *quoteID* of the related Quote Received event in its Order Route event. The *quoteID* is not required to be populated on events representing counter messages that were not directed to a posted quote.

Reporting requirements for representative orders in OTC securities are the same as for NMS securities. Refer to Appendix C of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.8.7. OTC Link Messages Directed by an OTC Link ATS Subscriber to a Quote from Another ATS

This scenario illustrates the CAT reporting requirements when an OTC Link message is directed by an OTC Link ATS subscriber to a quote from another ATS ("ATS B") (e.g. Global OTC or OTC Link NQB).

In this example, the ATS B's best bid is 1.15. OTC Link ATS displays this to its subscribers. Industry Member Broker 1 originates a proprietary order and sends an OTC Link ATS message directed to ATS B's quote. OTC Link ATS, on behalf of Industry Member Broker 1, creates a FIX order message and routes the order to ATS B. ATS B accepts the order, executes the trade, and reports the trade to the ORF.

Industry Member Broker 1 is required to report:

- The origination of the proprietary order (New Order event)
- The route of the proprietary order to ATS B via OTC Link ATS (Order Route event with *handlingInstructions* value 'DIR')

OTC Link ATS is required to report:

- The receipt of the proprietary order from Broker 1 (Order Accepted event with *handlingInstructions* value 'DIR')
- The route of the order to ATS B (Order Route event with *handlingInstructions* value 'DIR')

ATS B is required to report:

- The receipt of the order from Industry Member Broker 1 via OTC Link ATS (Order Accepted event)
- The execution linking to the ORF trade report (Trade event)

On Order Route events to OTC Link ATS, along with the corresponding Order Accepted event received by OTC Link ATS, a *handlingInstructions* value of 'DIR' must be populated.

Industry Member Broker 1 is required to report the new order and route to OTC Link ATS even if the order is not ultimately executed.

2.8.8. Unsolicited Cancellation by OTC Link ATS

This scenario illustrates the CAT reporting requirements when an Industry Member (IMID:BRKB) sends an order to another Market Maker (IMID:MMA) via an OTC Link Message and OTC Link ATS cancels the order without receiving an explicit cancel request.

In this scenario, Market Maker 1 is quoting symbol XYZ on OTC Link ATS to buy 1,000 shares at 1.15. OTC Link ATS subscriber and Industry Member Broker 2 sends an OTC Link ATS message electronically (i.e. via FIX) to Market Maker 1 indicating that the price is not negotiable. OTC Link ATS then cancels the order without receiving an explicit cancel request due to market conditions, such as a trading halt. Note that there is a distinction from implicit cancels, such as IOC orders. In these cases, Industry Members are not required to report a cancellation because it is implied by the circumstances.

Since the cancellation was initiated by OTC Link ATS, Broker 2 is not required to report a Route Cancelled event. Broker 2 and Market Maker 1 are required to report any action taken on the order as a result of the unsolicited cancellation, including a cancellation of the order on its own books and records.

For illustration purposes, this scenario illustrates the events that occur beginning when BRKB sends the OTC Link Message and does not illustrate each quote event reported by the market maker and OTC Link ATS.

For the order sent from Broker 2 to Market Maker 1 via OTC Link ATS based on the posted quote:

- Broker 2 is required to report the following:
 - ♦ The origination of a new proprietary order to sell 3,000 shares @1.15 (New Order event)
 - ♦ The route of the order to Market Maker 1 via OTC Link ATS (Order Route event to OTC Link ATS with *handlingInstructions* value 'DLVT=MMA' and 'NCTR')
- OTC Link ATS is required to report the following:
 - ♦ The receipt of the order from Broker 2 (Order Accepted event with a *handlingInstructions* value of 'DLVT=MMA' and 'NCTR')
 - ♦ The route of the order to Market Maker 1 (Order Route event with a *handlingInstructions* value of 'DLVF=BRKB' and 'NCTR', and a *quoteID* linking to the related MEQR event)
- Market Maker 1 is required to report the following:
 - ♦ The order received from Broker 2 via OTC Link ATS (Order Accepted event from OTC Link ATS with *handlingInstructions* value 'DLVF=BRKB' and 'NCTR')

For the unsolicited cancel by OTC Link ATS:

- OTC Link ATS is required to report the following:
 - ♦ The cancellation of the order (Order Cancelled event)
 - ♦ The cancellation of the route to Market Maker 1 (Route Cancelled event)
- Broker 2 and Market Maker 1 are required to report the following:
 - ♦ The cancellation of the order on their books and records (Order Cancelled events)

On Order Route events to OTC Link ATS, along with the corresponding Order Accepted event received by OTC Link ATS, a *handlingInstructions* value of 'DLVT' must be populated indicating the IMID of the party the route is being delivered to. On Order Accepted events received from OTC Link ATS, along with the corresponding Order Route event sent by OTC Link ATS, a *handlingInstructions* value of 'DLVF' must

be populated indicating the IMID of the party the route is being delivered from. Orders where the price is not negotiable must be marked with a *handlingInstructions* value of 'NCTR'.

If a route is sent from an Industry Member to a quote posted by a market maker, OTC Link ATS must populate the *quoteID* of the related Quote Received event in its Order Route event. The *quoteID* is not required to be populated on events representing counter messages that were not directed to a posted quote.

2.8.9. Trade Executed as a Result of an OTC Link ATS MAX Trade Message

This scenario illustrates the CAT reporting requirements when an Industry Member (IMID: BRK1) sends a MAX trade message to multiple Market Makers via OTC Link ATS.

In this scenario, Market Maker 1 (IMID: MM1), Market Maker 2 (IMID: MM2), and Market Maker 3 (IMID: MM3) have open quotes in symbol XYZ for 1,000 shares each. Industry Member Broker 1 has 2,000 shares of proprietary interest and sends an OTC Link MAX trade message identifying MM1, MM2, and MM3 as the respondents.

Upon receipt, MM1 immediately gives a partial fill for 1,000 shares. OTC Link ATS sends an updated MAX message to the respondents identified by IM1 indicating that the order has been partially filled. Upon receipt of the updated message, MM2 immediately gives a fill for the remainder of the order. OTC Link ATS then informs the remaining respondents that the order has been fully filled.

For illustration purposes, this scenario illustrates the events that occur beginning when Broker 1 sends the MAX trade message and does not illustrate each quote event reported by each market maker and OTC Link ATS.

For the MAX trade message sent from Broker 1 to the three market makers based on their posted quotes:

- Broker 1 is required to report the following:
 - ♦ The origination of a new proprietary order to sell 2,000 shares (New Order event)
 - ♦ The route of the MAX trade message to each Market Maker via OTC Link ATS (Order Route event to OTC Link ATS with *handlingInstructions* value 'DLVT=MM1', 'DLVT=MM2', 'DLVT=MM3', and 'MAX')
- OTC Link ATS is required to report the following:
 - ♦ The receipt of the MAX trade message from Broker 1 (Order Accepted event with a *handlingInstructions* value of 'DLVT=MM1', 'DLVT=MM2', 'DLVT=MM3', and 'MAX')
 - ♦ The initial route of the MAX trade message for 2,000 shares to each Market Maker (Order Route events with a *handlingInstructions* value of 'DLVF=IM1' and a *quoteID* linking to the related MEQR event for each market maker)
 - ♦ The modification of the MAX trade message to MM2 and MM3 for 1,000 shares reflecting a reduction in shares after the partial execution by MM1 (Route Modified events with a *handlingInstructions* value of 'DLVF=IM1')

- ♦ The cancellation of the MAX trade message to MM3 after the order was fully filled by MM2 (Route Cancelled event)
- Market Maker 1 is required to report the following:
 - ♦ The initial MAX trade message for 2,000 shares received from Broker 1 via OTC Link ATS (Order Accepted events from OTC Link ATS with *handlingInstructions* value 'DLVF=IM1')
 - ♦ The partial execution of the order for 1,000 shares from the market maker's prop account (Trade event linking to the ORF report)
- Market Maker 2 is required to report the following:
 - ♦ The initial MAX trade message for 2,000 shares received from Broker 1 via OTC Link ATS (Order Accepted events from OTC Link ATS with *handlingInstructions* value 'DLVF=IM1')
 - ♦ The modified MAX trade message for 1,000 shares (Order Modified events from OTC Link ATS with *handlingInstructions* value 'DLVF=IM1')
 - ♦ The partial execution of the order for 1,000 shares from the market maker's prop account (Trade event linking to the ORF report)
- Market Maker 3 is required to report the following:
 - ♦ The initial MAX trade message for 2,000 shares received from Broker 1 via OTC Link ATS (Order Accepted events from OTC Link ATS with *handlingInstructions* value 'DLVF=IM1')
 - ♦ The modified MAX trade message for 1,000 shares (Order Modified events from OTC Link ATS with *handlingInstructions* value 'DLVF=IM1')
 - ♦ The cancellation of the MAX trade message (Order Cancelled event)

On Order Route events to OTC Link ATS, along with the corresponding Order Accepted event received by OTC Link ATS, a *handlingInstructions* value of 'DLVT' must be populated indicating the IMID of the party the route is being delivered to. In this scenario, since the MAX trade message was delivered to multiple market makers, a separate instruction must be populated identifying the IMID of each market maker that the MAX trade message was delivered to.

On Order Accepted events received from OTC Link ATS, along with the corresponding Order Route event sent by OTC Link ATS, a *handlingInstructions* value of 'DLVF' must be populated indicating the IMID of the party the route is being delivered from.

Since the MAX trade message was sent from an Industry Member to multiple quotes posted by different market makers, OTC Link ATS must populate the *quoteID* of the related Quote Received for each Order Route event to each market maker.

2.8.10. Market Maker Responds to an OTC Link ATS MAX Trade Message That Has Already Been Fully Filled

This scenario illustrates the CAT reporting requirements when an Industry Member (IMID: BRK1) sends a MAX trade message to multiple Market Makers via OTC Link ATS.

In this scenario, Market Maker 1 (IMID: MM1), Market Maker 2 (IMID: MM2), and Market Maker 3 (IMID: MM3) have open quotes in symbol XYZ for 1,000 shares each. Industry Member Broker 1 has 2,000 shares of proprietary interest and sends an OTC Link MAX trade message identifying MM1, MM2, and MM3 as the respondents.

Upon receipt, all three Market Makers respond with 1,000 share executions. Since there were only 2,000 shares available to execute, only the first two market makers receive executions, and the third market maker receives notification from OTC Link ATS that the order has already been fully executed.

For illustration purposes, this scenario illustrates the events that occur beginning when Broker 1 sends the MAX trade message and does not illustrate each quote event reported by each market maker and OTC Link ATS.

For the MAX trade message sent from Broker 1 to the three market makers based on their posted quotes:

- Broker 1 is required to report the following:
 - ♦ The origination of a new proprietary order to sell 2,000 shares (New Order event)
 - ♦ The route of the MAX trade message to each Market Maker via OTC Link ATS (Order Route event to OTC Link ATS with *handlingInstructions* value 'DLVT=MM1', 'DLVT=MM2', 'DLVT=MM3', and 'MAX')
- OTC Link ATS is required to report the following:
 - ♦ The receipt of the MAX trade message from Broker 1 (Order Accepted event with a *handlingInstructions* value of 'DLVT=MM1', 'DLVT=MM2', 'DLVT=MM3', and 'MAX')
 - ♦ The route of the MAX trade message for 2,000 shares to each Market Maker (Order Route events with a *handlingInstructions* value of 'DLVF=IM1' and a *quoteID* linking to the related MEQR event for each market maker)
 - ♦ The cancellation of the MAX trade message to MM3 after the order was fully filled (Route Cancelled event)

- Market Maker 1 is required to report the following:
 - ♦ The MAX trade message for 2,000 shares received from Broker 1 via OTC Link ATS (Order Accepted events from OTC Link ATS with *handlingInstructions* value 'DLVF=IM1')
 - ♦ The partial execution of the order for 1,000 shares from the market maker's prop account (Trade event linking to the ORF report)
- Market Maker 2 is required to report the following:
 - ♦ The MAX trade message for 2,000 shares received from Broker 1 via OTC Link ATS (Order Accepted events from OTC Link ATS with *handlingInstructions* value 'DLVF=IM1')
 - ♦ The partial execution of the order for 1,000 shares from the market maker's prop account (Trade event linking to the ORF report)
- Market Maker 3 is required to report the following:
 - ♦ The MAX trade message for 2,000 shares received from Broker 1 via OTC Link ATS (Order Accepted events from OTC Link ATS with *handlingInstructions* value 'DLVF=IM1')
 - ♦ The cancellation of the MAX trade message (Order Cancelled event)

On Order Route events to OTC Link ATS, along with the corresponding Order Accepted event received by OTC Link ATS, a *handlingInstructions* value of 'DLVT' must be populated indicating the IMID of the party the route is being delivered to. In this scenario, since the MAX trade message was delivered to multiple market makers, a separate instruction must be populated identifying the IMID of each market maker that the MAX trade message was delivered to.

On Order Accepted events received from OTC Link ATS, along with the corresponding Order Route event sent by OTC Link ATS, a *handlingInstructions* value of 'DLVF' must be populated indicating the IMID of the party the route is being delivered from.

Since the MAX trade message was sent from an Industry Member to multiple quotes posted by different market makers, OTC Link ATS must populate the *quoteID* of the related Quote Received for each Order Route event to each market maker.

2.9. Foreign Scenarios

This section illustrates the CAT reporting requirements when an Industry Member routes an order to a foreign destination for execution. These scenarios assume that the related security is CAT reportable in accordance with [Section I of the CAT FAQs regarding Foreign Securities](#).

2.9.1. Route to a Foreign Broker-Dealer

This scenario illustrates the CAT reporting requirements when an Industry Member routes an order to another Industry Member, who routes the order to an affiliated foreign broker-dealer. Since the foreign broker-dealer is not a CAT reporter and the execution was not reported for public dissemination purposes in the United States, the Industry Member must report an Order Fulfillment event to represent the outcome of the customer order.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The route of the customer order to the affiliated foreign broker-dealer (Order Route event)
- The outcome of the order (Order Fulfillment event)

When reporting Order Fulfillment events for orders that were routed to a foreign broker-dealer, *firmDetails* are not required. While this scenario reflects the fill of a customer order on a foreign market, the same requirement to report an Order Fulfillment event would apply if the order were proprietary.

| # | Step | Reported Event | Comments |

2.9.2. Customer Order is Routed to a Foreign Affiliate, and the Foreign Affiliate Executes the Order on a Net Basis

This scenario illustrates the CAT reporting requirements when an Industry Member receives an order from its customer to buy a foreign security and routes the order to a non-member foreign affiliate for execution. The foreign affiliate executes the order in the foreign market and the transaction is reported by the foreign market. The foreign affiliate sells the security to the Industry Member at a different price than the price reported in the foreign market. The Industry Member fills the customer order at the same price at which it bought the security from its foreign affiliate (except for any change in price due to currency conversion).

Since the price given to the Industry Member by the foreign affiliate was different than the price that the foreign affiliate received on the foreign market, the Industry Member is required to submit a media trade report to a TRF in the United States. In the TRF report, the FINRA member firm will be identified as the executing firm on the trade report with a blank contra.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to its foreign affiliate (Order Route event)
- The execution of the order in the foreign market (one-sided Trade event linking to the TRF report with a *sideDetailsInd* of 'BUY')

Broker 1 is required to report the execution of the order on the foreign market using a Trade event with linkage to the TRF report. Broker 1 is only required to report its own side of the execution in the Trade

event side details. The *sideDetailsInd* field must be populated with a value of 'BUY', indicating that the Trade event is one sided, and that only the *buyDetails* will be populated.

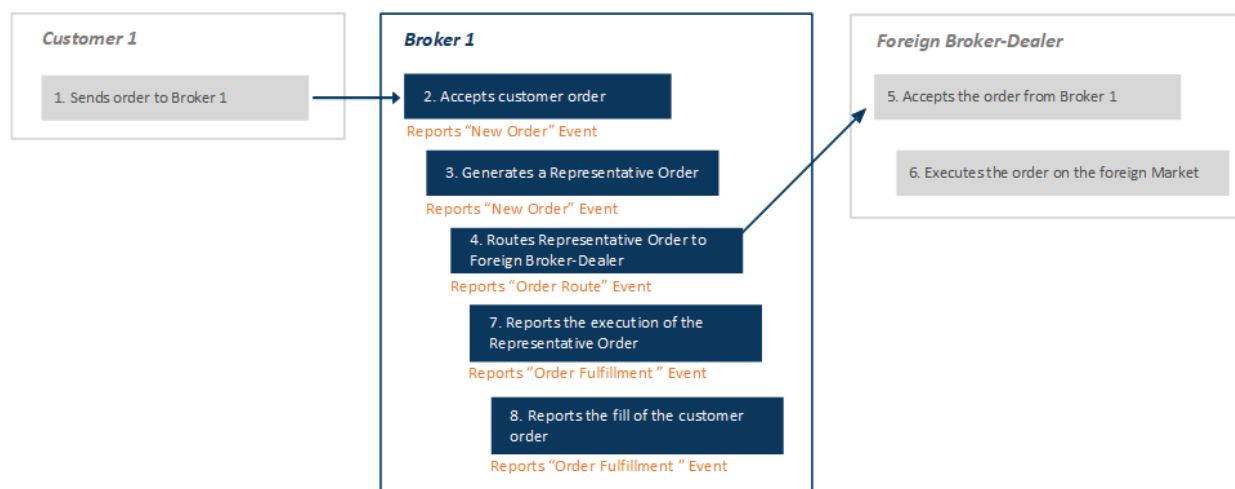

| # | Step | Reported Event | Comments |
|---|---|---|--|
| 1 | Customer sends a Buy order to Broker 1 | NA | |
| 2 | Broker 1 receives the Buy order from the customer | <p><i>Broker 1 (IMID=FRMA) reports a New Order event</i></p> <p>type: MENO orderKeyDate: 20170801T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20170801T143031.123456 manualFlag: false deptType: A side: B price: 10.01 quantity: 300 orderType: LMT timeInForce: DAY=20170801 tradingSession: FOR custDspIntrFlag: false firmDesignatedID: INC123 accountHolderType: A affiliateFlag: false negotiatedTradeFlag: false representativeInd: N</p> | |

| # | Step | Reported Event | Comments |
|---|--|--|---|
| | | tradingSession: FOR affiliateFlag: true isoInd: NA | |
| 5 | Foreign affiliate accepts the order from Broker 1 and executes the order in the foreign market @9.97 | NA | This transaction is reported by to the foreign market. |
| 6 | Foreign affiliate sells the shares to Broker 1 @10.01 | NA | Since the foreign affiliate received a price of 9.97 on the foreign market, and sold the shares to Broker 1 a price of 10.01, Broker 1 is required to report a media trade report in the US. |
| 7 | Broker 1 reports the trade to the TRF and reports a one-sided Trade event @10.01 | Broker 1 reports a <i>Trade event</i> type: MEOT tradeKeyDate: 20170801T000000 tradeID: XYZ125 symbol: XYZ eventTimestamp: 20170801T143035.53456 manualFlag: false cancelFlag: false cancelTimestamp: quantity: 300 price: 10.01 capacity: A tapeTradeID: TRF123 marketCenterID: DN sideDetailsInd: BUY buyDetails: orderKeyDate: 20170801T000000 orderID: O12345 side: B | Since Broker 1 reported the trade to the TRF, Broker 1 must populate all relevant fields required to link to the related trade report. In this scenario, Broker 1 is only required to report its own side in the Trade event side details. The <i>sideDetailsInd</i> field must be populated with a value of 'BUY' indicating that only the <i>buyDetails</i> are populated. |

2.9.3. Customer Order is Routed to a Foreign Broker-Dealer and Executed on a Riskless Principal Basis

This scenario illustrates the CAT reporting requirements when an Industry Member routes a customer order on a Riskless Principal basis to a foreign broker-dealer for execution. In this scenario, the Industry Member receives a customer order and generates a representative order, then routes the representative order to a foreign broker-dealer.

The foreign broker-dealer executes the order in the foreign market and the transaction is reported by the foreign market. The foreign broker-dealer sells the security to the Industry Member at the same price that was reported in the foreign market. The Industry Member fills the customer order at the same price at which it bought the security from its foreign affiliate (except for any change in price due to currency conversion).

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of a representative order (New Order event)
- The route of the representative order (Order Route event)
- The execution representative order (Order Fulfillment event with a *fulfillmentLinkType* of 'FOR')
- The fill of the customer order (Order Fulfillment event with a *fulfillmentLinkType* of 'Y')

firmDetails are not required on Order Fulfillment events with a *fulfillmentLinkType* of 'FOR' representing orders that were routed to a foreign broker-dealer.

2.9.4. Industry Member Routes an Order in an OTC Equity Symbol of a Foreign Security to Another Industry Member with Discretion on Where to Execute

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 routes an order in an OTC equity symbol of a foreign security to another Industry Member Broker 2, and Broker 2 has discretion on how to execute the order. Broker 2 then chooses to route the order to a foreign market for execution. Broker 1 is unaware of the outcome of the order and therefore has an obligation to report to CAT in accordance with [FAQs 12](#) and [14](#). However, Broker 2 knows that the order was executed and trade reported on a foreign market, and does not have an obligation to report to CAT in accordance with [FAQ 17](#).

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Broker 2 (Order Route event with *destinationType* 'O')

While Broker 2 may optionally report this activity to CAT, it does not have a CAT reporting obligation in accordance with [FAQ 17](#).

Broker 1 may populate a *destinationType* value of 'O' on its Order Route event to Broker 2. When *destinationType* 'O' is populated, linkage will be attempted on the Order Route event. After linkage is attempted, if no link is found, the firm will not receive an unlinked error.

| # | Step | Reported Event | Comments |
|---|-------------------------------------|---|----------|
| 1 | Customer sends an order to Broker 1 | NA | |
| 2 | Broker 1 accepts the customer order | Broker 1 reports a New Order event type: MENO orderKeyDate: 20180501T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 manualFlag: false deptType: A side: B price: 10.00 quantity: 1000 orderType: LMT timeInForce: DAY=20180501 tradingSession: ALL custDsplntrFlag: false firmDesignatedID: EFGHO001 accountHolderType: A affiliateFlag: false negotiatedTradeFlag: false | |

| # | Step | Reported Event | Comments |
|---|--|---|--|
| | | representativeInd: N | |
| 3 | Broker 1 routes the customer order to Broker 2 | Broker 1 reports an <i>Order Route event</i> type: MEOR orderKeyDate: 20180501T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234556 manualFlag: false senderIMID: 123:BRKA destination: 456:BRKB destinationType: O routedOrderID: XYZ123555 side: B price: 10.00 quantity: 1000 orderType: LMT timeInForce: DAY=20180501 tradingSession: ALL affiliateFlag: false isoInd: NA | If Broker 1 does not know that the order was executed and trade reported on a foreign market, or chooses to optionally report the order, then to avoid an interfirm linkage error, they should report the <i>destinationType</i> 'O'. When <i>destinationType</i> 'O' is populated, linkage will be attempted on the Order Route event. After linkage is attempted, if no link is found, the firm will not receive an unlinked error. |
| 4 | Broker 2 accepts the order from Broker 1 | NA | Broker 2 knows that the order was executed and trade reported on a foreign market and does not have an obligation to report this activity to CAT. |
| 5 | Broker 2 routes the customer order to a foreign market for execution | NA | Broker 2 knows that the order was executed and trade reported on a foreign market and does not have an obligation to report this activity to CAT. |

2.9.5. Industry Member Routes an Order in an OTC Equity Symbol of a Foreign Security to Another Industry Member with Instructions to Execute on a Foreign Market

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 routes an order in an OTC equity symbol of a foreign security to another Industry Member Broker 2 with instructions to direct the order to a foreign market for execution. In accordance with [FAQ I6](#), neither Broker 1 nor Broker 2 have an obligation to report this activity to CAT. However, Broker 2 chooses to optionally report this activity.

Industry Member Broker 2 optionally reports:

- The receipt of the order from Broker 1 (Order Accepted event with *senderType* 'O')
- The route of the order to the foreign market (Order Route event)
- The outcome of the order (Order Fulfillment event)

While Broker 1 may also optionally report this activity to CAT, it does not have a CAT reporting obligation in accordance with [FAQ 17](#).

Broker 2 may populate a *senderType* value of 'O' on its Order Accepted event from Broker 1. When *senderType* 'O' is populated, linkage will be attempted on the Order Accepted event. After linkage is attempted, if no link is found, the firm will not receive an unlinked error.

The eventTimestamp in the Order Fulfillment event represents the time that the firm filled the customer order, not the time that the execution was received on the foreign market. |

2.10. Electronic Duplicate Scenarios

This section illustrates the CAT reporting requirements when an Industry Member routes or receives an order manually and then subsequently sends or receives an electronic message to represent the manual instruction. Refer to Section 3.2.2 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.10.1. Manual Order Route Followed by Electronic Route, Merged Event

This scenario illustrates the CAT reporting requirements when an Industry Member manually routes an order to another Industry Member and follows up with an electronic route message. In this scenario, both parties report a ‘merged’ event.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)

When reporting a 'merged' event, Industry Members are required to report both the *eventTimestamp* and the *electronicTimestamp*, along with a *routedOrderID*. The *electronicDupFlag* must be set to 'false' and the *manualFlag* must be set to 'true' on a 'merged' event.

| 6 | Broker 2 accepts the electronic order route message | <i>Broker 2 (IMID = FRMB) reports an Order Accepted event</i> type: MEOA orderKeyDate: 20180417T000000 orderID: O34567 symbol: XYZ eventTimestamp: 20180417T143036 manualFlag: true electronicDupFlag: false electronicTimestamp: 20180417T143040.126456 receiverIMID: 456:FRMB senderIMID: 123:FRMA senderType: F routedOrderID: RT5678 affiliateFlag: false deptType: A side: B price: 9.99 quantity: 1000 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG isoInd: NA custDsplntrFlag: false | Broker 2 reports a merged event for the Order Accepted event. <i>electronicDupFlag</i> must be set to 'false' on merged events. The <i>eventTimestamp</i> on the Order Accepted event must capture the time at which Broker 2 agreed to take the order from Broker 1 in step 4 (with granularity to at least seconds). The <i>electronicTimestamp</i> must be the time at which the electronic route was received and must be reported to millisecond granularity. |

2.10.2. Manual Order Route, Electronic Duplicate Order

This scenario illustrates the reporting requirements when an Industry Member manually routes an order but is unable to merge the manual and electronic copies of the order into a single message for CAT Reporting.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The manual route to Broker 2 (Order Route event)
- The electronic route message sent to Broker 2 (Order Route event with *electronicDupFlag* populated as 'true')

Industry Member Broker 2 is required to report:

- The receipt of the route from Broker 1 (Order Accepted event)
- The receipt of the electronic route message from Broker 1 (Order Accepted event with *electronicDupFlag* populated as 'true')

When reporting the electronic duplicate event, the *electronicDupFlag* must be populated as 'true', and the *manualFlag* must be populated as 'false'. The *routedOrderID* field is not required on the events reflecting the manual route by Broker 1 and the manual receipt by Broker 2, but is required on the events reflecting the receipt of the duplicate electronic message. The *orderID* on the event reflecting the manual order receipt by Broker 2 must not be the same as the *orderID* on the event reflecting the receipt of the duplicate electronic message.

Industry Members are required to populate the *manualOrderID* field on the electronic duplicate event identifying the *orderID* of the related manual order. The *manualOrderKeyDate* must also be populated in order to generate a Manual Order Key to link to the electronic duplicate event to the original manual event.

The <i>manualOrderKeyDate</i> must also be populated.</p> |

2.10.3. Manual Order, One Side Reports Merged Event

This scenario illustrates the reporting requirements when an Industry Member manually routes an order to another Industry Member. The routing Industry Member chooses to report a single 'merged' order event with both an *eventTimestamp* and an *electronicTimestamp*, and the receiving Industry Member reports separate events for the receipt of the manual order and the receipt of the electronic message.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Broker 2 (Order Route event)

When reporting a 'merged' event, Broker 1 is required to report both the *eventTimestamp* and the *electronicTimestamp*, along with a *routedOrderID*. The *electronicDupFlag* must be set to 'false' and the *manualFlag* must be set to 'true' on the 'merged' event.

Industry Member Broker 2 is required to report:

- The manual receipt of the order from Broker 1 (Order Accepted event)
- The receipt of the electronic route message from Broker 1 (Order Accepted event with *electronicDupFlag* populated as 'true')

When reporting the electronic duplicate event, Broker 2 is required to populate the *electronicDupFlag* as 'true', and the *manualFlag* as 'false'. The *routedOrderID* field is not required on the event reflecting the manual receipt of the order, but is required on the event reflecting the receipt of the duplicate electronic message. The *orderId* on the event reflecting the manual order receipt by Broker 2 must not be the same as the *orderId* on the event reflecting the receipt of the duplicate electronic message.

Broker 2 is required to populate the *manualOrderID* field on electronic duplicate events identifying the *orderId* of the related manual order. The *manualOrderKeyDate* must also be populated in order to generate a Manual Order Key to link to the electronic duplicate event to the original manual event.

2.11. Child Order Scenarios

This section illustrates the CAT reporting requirements when an order is sliced within the desk or department it is being worked. Child Order events are not required to be reported to CAT, but are provided for the convenience of Industry Members to help model these types of order handling scenarios. Refer to Section 4.6 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

2.11.1. Industry Member Creates Child Orders and Routes

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order and splits the customer order into multiple child orders before further handling. This scenario illustrates the reporting requirements for generating child orders, and does not reflect further order handling.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The generation of each child order (Child Order event)
- The route of each child order (Order Route event)

Industry Members Broker 2 and 3 are required to report:

- The receipt of each order from Broker 1 (Order Route event)

2.11.2. Industry Member Creates Multiple Branches of Child Orders

This scenario illustrates the CAT reporting requirements when an order is handled at multiple desks within an Industry Member, and each desk has chosen to work an order by splitting the original order into multiple child orders. This scenario illustrates the reporting requirements for generating child orders, and does not reflect further order handling.

Industry Member Broker 1 must report the following for each desk:

- At the Sales Desk:
 - ♦ The receipt of the customer (New Order event)
 - ♦ The generation of each child order (Child Order events)
- At the Arbitrage Desk:
 - ♦ The receipt of the internal route from the Sales Desk (Order Internal Route Accepted event)

- ♦ The generation of each child order (Child Order events)
- ♦ The route of each child order (Order Route event)
- At the Trading Desk:
 - ♦ The receipt of the internal route from the Sales Desk (Order Internal Route Accepted event)
- At the Program Trading desk:
 - ♦ The receipt of the internal route from the Trading Desk (Order Internal Route Accepted event)

2.11.3. Industry Member Creates Child Orders Then Cancels the Parent order

This scenario illustrates the CAT reporting requirements when an Industry Member originates a proprietary order and splits the order into multiple child orders. The Industry Member then decides to cancel the parent order. While the Industry Member is required to report an Order Cancelled event reflecting the cancellation of the parent order, the Industry Member is also required to report a Child Order Cancelled event for each related Child Order.

Industry Member Broker 1 is required to report:

- The origination of the proprietary order (New Order event)
- The generation of each child order (Child Order events)
- The cancellation of the parent order (Order Cancelled event)
- The cancellation of each child order (Child Order Cancelled event)

2.11.4. Industry Member Generates a Representative Order then Creates Child Orders

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order, and then generates a representative order to facilitate the execution of the customer order. The Industry Member then generates multiple child orders off the representative order, which are routed to the exchange. The customer order is filled on a print for print basis as executions occur against the representative child orders on the exchange. Upon receipt of each fill, an Order Fulfillment event is reported for the customer order. The *firmDetails* on the Order Fulfillment events should reflect the *orderID* of the representative order.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)

- The generation of the representative order (New Order event)
- The creation of each child order for (Child Order events)
- The route of each child order to the exchange (Order Route events)
- The fill of the original customer order on a print for print basis (Order Fulfillment events)

2.12. Proprietary Order Scenarios

This section illustrates the CAT reporting requirements for proprietary orders.

2.12.1. Unsolicited Cancellation of a Proprietary Order by an Exchange

This scenario illustrates the CAT reporting requirements when an Industry Member routes a proprietary order to an exchange and the exchange cancels the order without receiving an explicit cancel request. In this scenario, Industry Member Broker 1 receives a proprietary order, and routes the order to an exchange for execution. The exchange accepts the order, then cancels the order without receiving an explicit cancel request. The requirements in this scenario would be the same if the order had been routed to another Industry Member rather than an exchange.

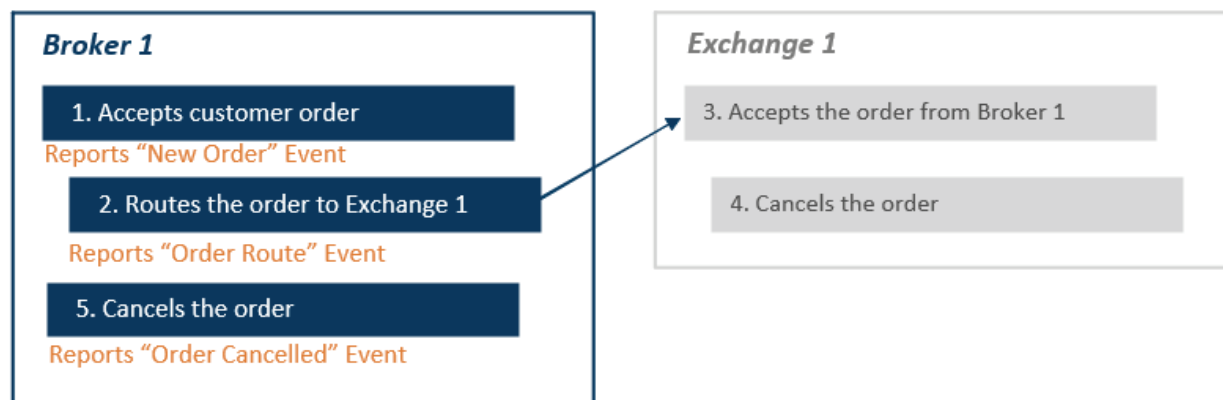

Note that there is a distinction from implicit cancels, such as IOC orders or DFD messages. In these cases, Industry Members would not have to report a cancellation because it's implied by the circumstances.

Since the cancellation was initiated by the exchange, Broker 1 is not required to report a Route Cancelled event. Broker 1 is required to report any action that it takes on the order as a result of the unsolicited cancellation, including a cancellation of the order on its own books and records, as outlined in Option 1.

If the order remains open on Broker 1's books and records after receipt of the unsolicited cancellation, Broker 1 must report any subsequent action on the order, such as a modification or a route to another venue, as outlined in Option 2.

Option 1:

Upon cancellation by the exchange, Broker 1 cancels the order on its books and records.

Industry Member Broker 1 is required to report:

- The origination of the proprietary order (New Order event)
- The route of the order to the exchange (Order Route event)
- The cancellation of the order (Order Cancelled event)

Industry Members are required to capture the *eventTimestamp* in Order Cancelled events reflecting the time the order was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). In this example, the *eventTimestamp* reflects the time that Broker 1 cancelled the order on its books and records after receiving the exchange cancellation. Broker 1 is not required to report a receipt time, as the order was not a customer order, and no request was received.

Option 2:

Upon cancellation by the exchange, Broker 1 modifies the order on its books and records and routes the order to another venue.

Industry Member Broker 1 is required to report:

- The origination of the proprietary order (New Order event)
- The route of the order to Exchange 1 (Order Route event)
- The modification of the proprietary order (Order Modified event)
- The route of the order to Exchange 2 (Order Route event)

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* reflects the time that Broker 1 modified the order on its

books and records after receiving the exchange cancellation. Broker 1 is not be required to report a receipt time, as the order was not a customer order, and no request was received.

2.12.2. Industry Member Cancels a Proprietary Order that has Already Been Executed

This scenario illustrates the CAT reporting requirements when an Industry Member attempts to cancel a proprietary order that has already been executed. In this scenario, Industry Member Broker 1 generates a proprietary order and routes the order to Broker 2 for execution. Broker 1 subsequently requests to cancel the order, but the order was fully executed before the cancellation was requested by Broker 1.

Industry Member Broker 1 is required to report:

- The origination of the proprietary order (New Order event)
- The route of the order to Broker 2 (Order Route event)
- Cancellation of the route to Broker 2 (Route Cancelled event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of Broker 1's order (Trade event)

In accordance with [CAT FAQ B42](#), Broker 2 is not required to report an Order Cancel Request event in Phase 2d, since the request was received after the order was fully executed. However, this activity may be required in future phases of CAT. If Broker 2 chooses to optionally report an Order Cancel Request event, it will not be rejected by CAT in accordance with [CAT FAQ P14](#).

2.13. Clearing Firm Scenarios

This section illustrates the CAT reporting requirements for orders handled in a Clearing Firm's system.

2.13.1. Order Routed and Executed via a Clearing Firm

This example illustrates the CAT reporting requirements when an introducing firm enters a customer order into a clearing firm's system, and the clearing firm executes the order from a proprietary account. Both the introducing firm and clearing firm are Industry Members.

Introducing Firm Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the clearing firm (Order Route event)

The Clearing Firm is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of the order (Trade event)

| # | Step | Reported Event | Comments |
|---|--|--|----------|
| 1 | Customer sends the order to Broker 1 | NA | |
| 2 | Broker 1 accepts the customer order | <i>Broker 1 reports a New Order event</i> type: MENO orderKeyDate: 20180417T000000 orderID: O23456 symbol: XYZ eventTimestamp: 20180417T153035.234456 manualFlag: false deptType: A side: B price: 10.00 quantity: 1000 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG custDspIntrFlag: false firmDesignatedID: A8B7C6 accountHolderType: A affiliateFlag: false negotiatedTradeFlag: false representativeInd: N | |

2.13.2. Direct Order Routing via a Clearing Firm's System

This scenario illustrates the CAT reporting requirement when an introducing firm receives a customer order and, using its clearing firm's system, directs the order to an exchange for execution. The clearing firm does not participate in any order routing or handling instructions, but only provides the technology to the introducing firm to route the order.

Introducing Firm Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to Exchange 1 (Order Route event)

The clearing firm does not have CAT reporting obligations in this scenario. The exchange follows CAT reporting guidelines as outlined in the [CAT Reporting Technical Specifications for Plan Participants](#).

| # | Step | Reported Event | Comments |
|---|---|---|----------|
| 1 | Customer sends an order to Broker 1 | NA | |
| 2 | Broker 1 accepts the order from the customer | <p><i>Broker 1 reports a New Order event</i></p> <p> type: MENO orderKeyDate: 20180417T000000 orderID: O23456 symbol: XYZ eventTimestamp: 20180417T153035.234456 manualFlag: false deptType: A side: B price: 10.00 quantity: 1000 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG custDsplntrFlag: false firmDesignatedID: 4e3f2g1h accountHolderType: A affiliateFlag: false negotiatedTradeFlag: false representativeInd: N </p> | |

| # | Step | Reported Event | Comments |
|---|--|---|----------|
| | | isoInd: NA | |
| 4 | Exchange 1 accepts the order from Broker 1 | <i>Exchange 1 reports a Participant Order Accepted event</i> | |

2.13.3. Order Routing via an Algorithm Provided by the Clearing Firm

This scenario illustrates the CAT reporting requirements when an introducing firm receives a customer order and enters it into a clearing firm's system. The clearing firm's system automatically determines the routing destination based on pre-defined criteria developed by the clearing firm. The clearing firm makes the determination as to where the order is routed. The introducing firm does not direct the order. Both the introducing firm and the clearing firm are Industry Members.

Introducing Firm Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the clearing firm (Order Route event)

The Clearing Firm is required to report:

- The receipt for the order from the introducing firm (Order Accepted event)
- The route of the order to Exchange 1 (Order Route event)

The exchange follows CAT reporting guidelines as outlined in the [CAT Reporting Technical Specifications for Plan Participants](#).

2.14. Fractional Share Scenarios

This section illustrates the CAT reporting requirements for liquidating a fractional share from a customer or client account. These scenarios can be applied to full liquidation of a position that includes fractional shares, an ACAT request or dividend reinvestment after liquidation.

2.14.1. Industry Member Liquidates Customer Position by Routing Away the Whole Share Quantity and Internalizing the Fractional Share

This scenario illustrates the CAT reporting requirements when a customer or client requests that an Industry Member liquidate an entire position which includes a fractional share. The Industry Member routes the whole share portion of the order to an exchange for execution and executes the fractional share against its own proprietary account.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the whole share quantity to the exchange (Order Route event)
- The execution of the fractional share against its proprietary account (Trade event)

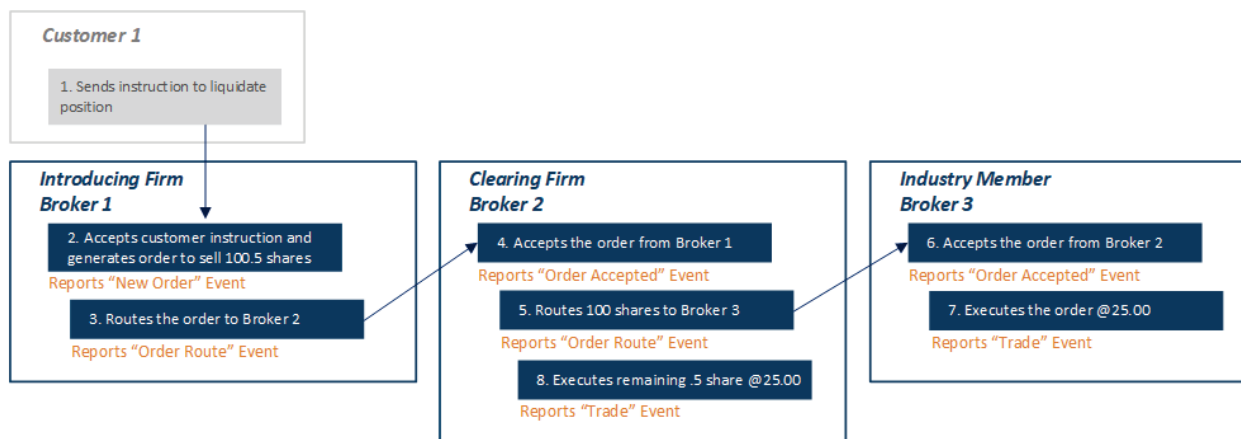

| # | Step | Reported Event | Comments |
|---|--|---|---|
| 1 | Customer sends an instruction to Broker 1 to liquidate its position | NA | |
| 2 | Broker 1 accepts the customer instruction and generates an order to liquidate the position | Broker 1 reports a New Order event type: MENO orderKeyDate: 20180416T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180416T153035.234456 manualFlag: false deptType: T side: SL price: quantity: 100.5 | Since the customer requested full liquidation of the position, Broker 1 is required to report the full <i>quantity</i> of 100.5 shares. |

2.14.2. Introducing Firm Routes the Position to the Clearing Firm

This scenario illustrates the CAT reporting requirements when a customer or client requests that an Industry Member introducing firm liquidate an entire position which includes a fractional share. The introducing firm routes the entire position to the clearing firm and the clearing firm routes the whole share portion to another Industry Member and executes the fractional share against its own proprietary account.

Introducing Firm Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the order to the clearing firm (Order Route event)

Clearing Firm Broker 2 is required to report:

- The receipt of the order from Introducing Firm Broker 1 (Order Accepted event)
- The route of the whole share quantity to Broker 3 (Order Route event)
- The execution of the fractional share quantity (Trade event)

Broker 3 is required to report:

- The receipt of the whole share order from the Clearing Firm Broker 2 (Order Accepted event)
- The execution of the whole share order (Trade event)

| # | Step | Reported Event | Comments |

2.14.3. Introducing Firm Routes the Whole Share Quantity to Another Industry Member and Routes the Fractional Share to the Clearing Firm

This scenario illustrates the CAT reporting requirements when a customer or client requests that an Industry Member introducing firm liquidate an entire position which includes a fractional share. The customer order is entered into the clearing firm's system, but the clearing firm does not participate in any order routing or handling instructions for the whole share portion of the order. The introducing firm routes the whole share portion of the order to another Industry Member and the fractional share portion to the Industry Member clearing firm.

Introducing Firm Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The route of the whole share quantity to Broker 2 (Order Route event)
- The route of the fractional share quantity to Clearing Firm Broker 3 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the whole share order from Introducing Firm Broker 1 (Order Accepted event)
- The execution of the whole share order (Trade event)

Clearing Firm Broker 3 is required to report:

- The receipt of the fractional share order from Broker 1 (Order Accepted event)
- The execution of the fractional share order (Trade event)

The <i>sellDetails</i> reflect the details of customer order O3A1B2C. |

2.14.4. Clearing Firm Liquidates a Fractional Share after an ACAT or Account Closure Request

This scenario illustrates the CAT reporting requirements when an Industry Member clearing firm liquidates a fractional share that remained in a customer's account after processing an ACAT request. This scenario would similarly apply if an Industry Member clearing firm liquidates a fractional share received in a customer account due to an automatic reinvestment plan after the account was closed. The Industry Member clearing firm's system automatically creates an order based on receipt of the ACAT request and executes the fractional share against its own proprietary account.

Clearing Firm Broker 1 is required to report:

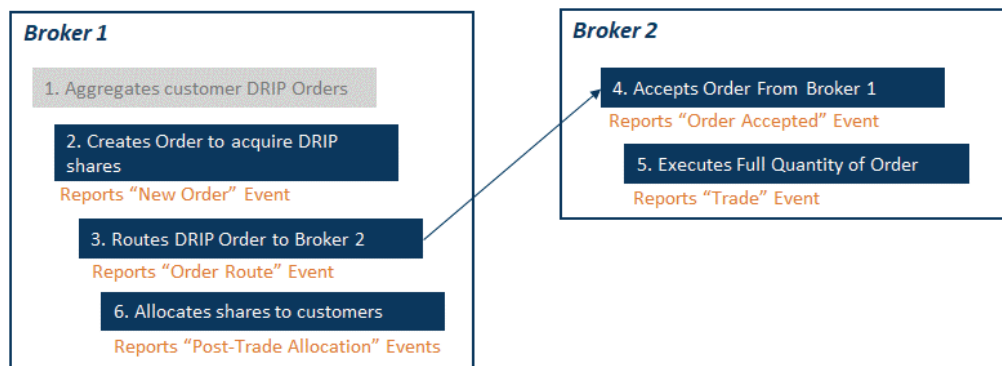

- The creation of the fractional share order (New Order event)
- The execution of the fractional share against its proprietary account (Trade event)

| # | Step | Reported Event | Comments |
|---|---|--|---|
| 1 | Broker 1's system creates an order to internalize the fractional share at the previous trading day's closing price of 25.00 per share | <p>Broker 1 reports a New Order event</p> <p>type: MENO orderKeyDate: 20180416T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180416T080000.000456 manualFlag: false deptType: T side: SL price: 25.00 quantity: 0.5 orderType: LMT timeInForce: DAY=20180416 tradingSession: REG custDsplntrFlag: false firmDesignatedID: CUST1234 accountHolderType: I affiliateFlag: false negotiatedTradeFlag: false representativeInd: N</p> | The <i>eventTimestamp</i> is the time that the Industry Member's system created the order. |

2.14.5. Dividend Reinvestment

The following scenario illustrates the reporting requirements for an Industry Member whose customers participate in a dividend reinvestment program, or other similar programs such as Employee Stock Purchase Programs. Industry Member Broker 1 aggregates dividend reinvestment investment program (DRIP) orders for participating customers, rounds up to the next whole share, and creates a new order to purchase shares that need to be allocated to customers. This order is routed to the street, executed, and allocated to the participating customers. The remaining fractional share is allocated to the proprietary account of Broker 1.

Industry Member Broker 1 is required to report:

- The order created to acquire shares for all customers participating in the dividend reinvestment program (New Order event)
- The route of the order to Broker 2 (Order Route event)

- The allocation of shares to the participating customers (Post-Trade Allocation events)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of the order (Trade event)

The allocation of shares to Broker 1's original customers is reportable by the firm performing the allocation, which is generally the clearing or self-clearing firm processing the allocation. In this scenario, Broker 1 is a self-clearing firm and has the obligation to report the allocation events to CAT.

Once the fractional inventory reaches a whole share threshold, Broker 1 would follow standard procedures for sales from proprietary accounts if actions were taken to flatten fractional share inventory.

Industry Member Broker 1 is required to report:

- The whole share order (New Order event)
- The route of the order to Broker 3 (Order Route event)

Industry Member Broker 3 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of the order (Trade event)

2.14.6. Industry Member Receives an Order for Fractional Shares

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order for a fractional share.

In this scenario, an Industry Member receives a fractional share order from a customer. The Industry Member rounds the customer's order up to the nearest whole share quantity and creates a representative order in a firm-owned account. The whole share quantity is routed to the exchange for execution. The clearing firm allocates the fractional share quantity to the customer and the remainder is allocated to the Industry Member's inventory account.

Industry Member Broker 1 is required to report:

- The receipt of the customer's fractional order (New Order event)
- The generation of a representative order for a full share quantity in a firm-owned account (New Order event)
- The route of the representative order to the exchange (Order Route event)
- The fill of the customer order at an average price (Order Fulfillment event)

The Clearing Firm is required to report:

- The allocation of the fractional shares to the customer (Post-Trade Allocation events)

If Industry Member Broker 1 generated a new order for the residual fractional share quantity, it also would be required to report a New Order event and an Order Fulfillment event for the proprietary order. Explicit linkage between the proprietary order and the representative order would be required through the *aggregatedOrders* field in the MENO for the representative order and the *firmDetails* in the MEOF representing the fill of the proprietary order. The Clearing Firm is not required to report the allocation of the whole share quantity to Industry Member Broker 1's firm-owned account or the remaining fractional share quantity to Industry Member Broker 1's inventory account, but may optionally report both allocations using the *allocationType* value of 'FRM'.

2.15. Stop and Conditional Order Scenarios

2.15.1. Stop Order

This scenario illustrates the CAT reporting requirements when a customer places a stop order, also referred to as a stop-loss order, with an Industry Member.

The customer places a GTC sell order and provides instructions to Industry Member Broker 1 specifying that, should the share price of XYZ fall below a predetermined level of \$35.00 (i.e., the stop price), the order should become immediately executable as a market order. Broker 1 then routes the order to Industry Member Broker 2. Broker 2 is holding the order at the time the stop price is reached and the condition is triggered and routes the order to an exchange for execution.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event with applicable *handlingInstructions*)
- The route of the customer order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event with applicable *handlingInstructions*)
- The time at which the stop price is hit, and the underlying condition of the order becomes effective (Order Effective event)
- The route of the customer order to the exchange (Order Route event)

If the order is received/originated or routed as a Stop order, the *orderType* field must be populated with a value of 'MKT'. If the order is received/originated or routed as a Stop Limit order, the *orderType* must be populated with a value of 'LMT', and the *price* field must be populated. Refer to [CAT FAQ B57](#) for additional information.

2.15.2. Stop on Quote Order

This scenario illustrates the CAT reporting requirements when a customer places an order with an Industry Member and communicates instructions that a market order be triggered by a quotation at the stop price. The customer places a GTC sell order and provides instructions to Industry Member Broker 1 specifying that, should a quotation in XYZ appear at \$35.00 (i.e., the stop price), the order should become immediately executable as a market order. Broker 1 holds the order until the condition is triggered (i.e., a quotation at the stop price), at which point Broker 1 routes the order to an exchange for execution.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event with applicable *handlingInstructions*)

- The time at which the stop price is hit, and the underlying condition of the order becomes effective (Order Effective event)
- The route of the customer order to the exchange (Order Route event)

If the order is received/originated or routed as a Stop on Quote order, the *orderType* field must be populated with a value of 'MKT'. If the order is received/originated or routed as a Stop Limit on Quote order, the *orderType* must be populated with a value of 'LMT', and the *price* field must be populated.

Refer to [CAT FAQ B57](#) for additional information.

| 6 | The Exchange accepts the order from Broker 1 | <i>EXCH1 reports a Participant Order Accepted event</i> | |

2.15.3. Trailing Stop Order

This scenario illustrates the CAT reporting requirements when a customer places a trailing stop order with Industry Member Broker 1, who routes the order to Broker 2 for further handling and execution. For the purposes of CAT reporting, a trailing stop order is defined as outlined in [FAQ B62](#).

In this scenario, a customer of Broker 1 places a GTC trailing stop sell order at 90% of the prevailing market price. Broker 1 routes the order to Broker 2. Broker 1 relies on Broker 2 to calculate the initial Trailing Stop price, which it determines upon receipt (i.e., initially, \$18.00). Broker 2 continuously re-calculates the trailing stop price as appropriate, and the order is retained by Industry Member Broker 2 until the trailing stop price is triggered.

The price of XYZ advances to a high of \$30.00 per share, and the highest calculated trailing stop price is \$27.00 (i.e., market price of \$30.00 X 90%). The market price for XYZ subsequently declines and hits or goes through the highest calculated trailing stop price (i.e. \$27.00), which triggers a market order to sell the 1,000 shares of XYZ. Once the limit order is triggered, Broker 2 routes the order to an exchange for execution.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event with applicable *handlingInstructions*)
- The route of the customer order to Broker 2 (Order Route event with applicable *handlingInstructions*)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event with applicable *handlingInstructions*)
- The time at which the stop price is hit, and the underlying condition of the order becomes effective (Order Effective event)
- The route of the customer order to the exchange (Order Route event)

If the order is received/originated or routed as a Trailing Stop order, the *orderType* field must be populated with a value of 'MKT'. If the order is received/originated or routed as a Trailing Stop Limit order, the *orderType* must be populated with a value of 'LMT', and the *price* field must be populated. While the scenario presented below is a Market Order, in Trailing Stop Limit orders the Limit price denoted in the *price* field and *triggerPrice* field may differ. Refer to [CAT FAQ B57](#) for additional information.

2.15.4. Stop Stock Order

In this scenario, an institutional customer places an order with Industry Member Broker 1, and the parties agree that the entire order will be executed at stop stock price or better. Broker 1 later executes the trade in an off-exchange transaction, filling the customer order from existing inventory held in a proprietary account at the stop stock price.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event with applicable *handlingInstructions*)
- The execution of the customer order against its proprietary account (Trade event)

| # | Step | Reported Event | Comments |
|---|-------------------------------------|---|---|
| 1 | Customer sends an order to Broker 1 | NA | |
| 2 | Broker 1 accepts the customer order | Broker 1 reports a New Order event type: MENO orderKeyDate: 20180417T000000 orderID: O12321 symbol: XYZ eventTimestamp: 20180417T143030.234456 manualFlag: false deptType: A side: B price: 8.64 quantity: 1000 orderType: LMT timeInForce: GTC tradingSession: REG handlingInstructions: SW=8.64 custDspIntrFlag: false firmDesignatedID: IN004 accountHolderType: A affiliateFlag: false negotiatedTradeFlag: false representativeInd: N | Broker 1 is required to report a <i>handlingInstructions</i> value of 'SW' (Stop Stock Transaction) indicating that the order resulted from an agreement that it be executed at stop stock price or better. The SW <i>handlingInstructions</i> must be paired with a value representing the agreed upon price (\$8.64). |

The <i>sellDetails</i> capture the FDID of the firm proprietary account from which the customer order was filled. |

2.15.5. Stop Price is Based on Underlying Condition

This scenario illustrates the CAT reporting requirements when a customer places a conditional order that has multiple underlying conditions.

In this example, the customer places a conditional stop order to sell 100 shares of security XYZ (Order A) with Industry Member Broker 1. The customer provides instructions specifying that the stop price for Order A be determined upon the execution of a separate order in security ABC (Order B).

This scenario addresses the CAT Reporting requirements for Order A. Unlike other stop scenarios (Such as Scenario 2.15.1) where the stop price was known at the time of order receipt, the stop price for Order A is unknown because it is based on an underlying condition (e.g., the execution of Order B). Upon receipt of Order A, Broker 1 reports a New Order event with *handlingInstructions* of 'CND' (Conditional Order) and 'STOPF' (Stop Formula). The 'STOPF' *handlingInstructions* value denotes that the stop price of the order is not known at the time of order receipt, as it is based on a formula. Broker 1 is holding the order at the time all underlying conditions of the order are met (execution of Order B and the stop being triggered), at which point Broker 1 routes the order to an exchange for execution.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event with applicable *handlingInstructions*)
- All conditions are met, and the order becomes effective (Order Effective event)
- The route of the customer order to the exchange (Order Route event)

If the order is received/originated or routed as a Stop order, the *orderType* field must be populated with a value of 'MKT'. If the order is received/originated or routed as a Stop Limit order, the *orderType* must be populated with a value of 'LMT', and the *price* field must be populated. Refer to [CAT FAQs B57](#) for additional information.

Since Broker 1 is holding the order at the time that all underlying conditions are met such that the order becomes and remains effective, Broker 1 will be required to report an Order Effective event to CAT. Refer to CAT [FAQ B67](#) for additional information.

| # | Step | Reported Event | Comments |
|---|--|---|--|
| 1 | Customer sends an order to Broker 1 (Order A). | NA | The customer provides instructions that Order A is conditional upon the execution of Order B, at which point Order A's stop price is set at \$5.00 below the execution price of Order B. |

| 7 | The Exchange accepts the order from Broker 1 | <i>EXCH1 reports a Participant Order Accepted event</i> | |

2.15.6. Order Contingent on Spread Condition

This scenario illustrates the CAT reporting requirements when a customer places an order with a spread condition such that order becomes activated or inactivated multiple times throughout the day.

In this example, the customer places an order to sell 500 shares of security XYZ with Industry Member Broker 1. The customer provides instructions specifying that the order be acted upon only when the market price of security XYZ is within a \$10.00 spread from the market price of security ABC. When these spread conditions are met (e.g., the market price of security XYZ is within a \$10.00 spread from the market price of security ABC), Broker 1 routes the order to Industry Member Broker 2. When these spread conditions are no longer active (e.g., the market price of security XYZ exceeds a \$10.00 spread from the market price of security ABC), Broker 1 cancels route to Broker 2. Later that day, the market price of security XYZ returns to being within a \$10.00 spread from the market price of security ABC, at which point Broker 1 routes the order to Industry Member Broker 3 where the order is executed.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)

- The initial route of the customer order to Broker 2 when the spread conditions are initially met (Order Route event)
- The cancellation of the route to Broker 2 (Route Cancelled event)
- The route of the customer order to Broker 3 when the spread conditions are subsequently met (Order Route event)

Industry Member Broker 2 is required to report:

- The initial receipt of the order from Broker 1 (Order Accepted event)
- The cancellation of the order received from Broker 1 (Order Cancelled event)

Industry Member Broker 3 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of Broker 1's order (Trade event)

Although Broker 1 cancelled the route that was sent to Broker 2, the customer order remained open in Broker 1's books and records. Therefore, Broker 1 is required to report the cancellation of the route that was sent to Broker 2. This guidance would also apply if Broker 1 routed the order to an exchange as opposed to another broker-dealer. Since the order in Broker 2's books and records is fully cancelled, Broker 2 is required to report the cancellation of the order they received from Broker 1 to CAT.

| # | Step | Reported Event | Comments |

2.16. RFQ and Solicitation Response Scenarios

This section illustrates the CAT reporting requirements for responses to RFQs (Request for Quote) and other forms of solicitation. Refer to Section 3.6.11 for Options RFQ and Solicitation Response scenarios.

2.16.1. Response to RFQ is Sent Electronically and is Executed by the Solicitor

This scenario illustrates the CAT reporting requirements when an Industry Member issues an RFQ through an RFQ platform. In this scenario, multiple Industry Members respond to the RFQ by sending FIX messages directly to the requesting Industry Member that are immediately actionable. Upon selection of a response (either by the trader or automatically by the IM's trading system), the Solicitor executes the order for the selected response against the customer order without any further action required by the winning bidder.

Each Responder is required to report the following:

- The origination of the RFQ Response (New Order event with the *solicitationFlag* set to 'true' and the *RFQID* populated)

- The route of the RFQ Response to The Solicitor (Order Route event)

The Solicitor is required to report the following:

- The receipt of a customer order (New Order event)
- The receipt of each RFQ response (Order Accepted event with *solicitationFlag* set to 'true')
- The execution of the customer order against the selected response (Trade event)

While Industry Members are not required to report RFQs or other forms of solicitation to CAT, Industry Members are required to report responses to RFQs and other forms of solicitation as described in [CAT FAQ B45](#). Responses communicated in standard electronic format (e.g. FIX) that are immediately actionable are reportable by both the Industry Member issuing the RFQ or solicitation ("the Solicitor") and the Industry Member responding to the RFQ or solicitation ("the Responder"), including responses that were not ultimately selected.

2.16.2. Response to RFQ is Sent Through an RFQ Platform, and the Solicitor Routes the Customer Order to the Winning Bidder

This scenario illustrates the CAT reporting requirements when an Industry Member issues an RFQ and receives multiple responses through an RFQ platform that is not part of the Industry Member's OMS/EMS and are not immediately actionable. Upon selection of a response, the Industry Member routes the customer order to the winner.

The Solicitor is required to report the following:

- The receipt of a customer order (New Order event)
- The route of the customer order to the winning Responder (Order Route events)

The selected Responder is required to report the following:

- The receipt of the order from the Solicitor (Order Accepted event)
- Execution of the customer order from a prop account (Trade event)

Responses to RFQs issued on an RFQ platform are reportable to CAT if the response is communicated to the Industry Member in standard electronic format (e.g. FIX), and the response is immediately actionable. However, responses to RFQs or other forms of solicitation that are communicated in standard electronic format or are not immediately actionable are not required to be reported to CAT in Phase 2d. However, this activity is expected to be required beginning in July 2023.

In this scenario, further action is required upon selection of a winning response before the order can be executed. Therefore, the RFQ responses are not reportable to CAT in Phase 2d.

All orders received or originated as the result of such RFQ or solicitation process must be reported and must be identified as being part of an RFQ or solicitation process subject to the phasing requirements as set forth in the CAT Reporting Technical Specifications for Industry Members. The *solicitationFlag* is not required to be populated as 'true' on events originated after selection of the winning bid. Refer to [CAT FAQ B45](#) for additional information.

2.16.3. Response to RFQ is Sent Electronically and Further Action is Required

This scenario illustrates the CAT reporting requirements when an Industry Member issues an RFQ through an RFQ platform. In response to the RFQ, multiple Industry Members respond by sending FIX messages directly to the requesting Industry Member's OMS that are not immediately actionable. Although the RFQ responses were sent via standard electronic format directly to the Industry Member's OMS/EMS, the Industry Members sending the responses are required to take additional action by sending a separate order to the requestor before any execution can occur, and would therefore not be considered immediately actionable.

The selected Responder is required to report the following:

- The origination of a New Order for the selected response (New Order event)
- The route of the order to the Solicitor (Order Route event)

The Solicitor is required to report the following:

- The receipt of a customer order (New Order event)
- The receipt of the order from the winning Responder (Order Accepted event)
- The execution of the customer order against the selected response (Trade event)

Although the RFQ responses were sent via standard electronic format directly to the Industry Member's OMS/EMS, the responses are not reportable in Phase 2d because the Industry Members sending the responses would be required to take additional action.

All orders received or originated as the result of such RFQ or solicitation process must be reported and must be identified as being part of an RFQ or solicitation process subject to the phasing requirements as set forth in the CAT Reporting Technical Specifications for Industry Members. The *solicitationFlag* is not

required to be populated as 'true' on events originated after selection of the winning bid. Refer to [CAT FAQ B45](#) for additional information.

2.16.4. Non-CAT Reporting Firm Issues an RFQ and Sends an Order to the Winning Bidder Who is a CAT Reporting Industry Member

This scenario illustrates the CAT reporting requirements when a non-CAT Reporting Asset Manager issues and receives several quotes in response through an RFQ platform that are not immediately actionable. Upon selection of a response from a CAT Reporting Industry Member, the Asset Manager is required to take further action in order to route an order to the winning bidder.

The selected Responder is required to report the following:

- The receipt of a New Order from the Soliciting Asset manager (New Order event)
- The execution of the order (Trade event)

Responses to RFQs issued on an RFQ platform are reportable to CAT if the response is communicated to the Industry Member in standard electronic format (e.g. FIX) and if the response is immediately actionable. However, responses to RFQs or other forms of solicitation that are not immediately actionable

are not considered electronic for CAT Reporting purposes and are not required to be reported to CAT in Phase 2d. However, this activity is expected to become reportable in July 2023.

In this scenario, further action is required by the Solicitor to send an order to the Responder. Therefore, the RFQ responses are not reportable to CAT in Phase 2d.

All orders received or originated as the result of such RFQ or solicitation process must be reported and must be identified as being part of an RFQ or solicitation process subject to the phasing requirements as set forth in the CAT Reporting Technical Specifications for Industry Members. The *solicitationFlag* is not required to be populated as 'true' on events originated after selection of the winning bid. Refer to [CAT FAQ B45](#) for additional information.

| # | Step | Reported Event | Comments |
|---|---|--|---|
| 1 | The Soliciting Asset Manager issues an RFQ | N/A | While the Soliciting Asset Manager is not a CAT Reporter, Industry Members are not required to report RFQs or other forms of solicitation to CAT. |
| 2 | Responders FRMA, FRMB and FRMC respond to the RFQ | N/A | Responses to RFQs or other forms of solicitation that are not immediately actionable are not required to be reported to CAT in Phase 2d. |
| 3 | The Soliciting Asset Manager receives the RFQ Responses from FRMA, FRMB and FRMC. The Soliciting Asset Manager selects the response from FRMC and sends FRMC an order | N/A | The Soliciting Asset Manager is not a CAT Reporter and is not required to report the origination of the order sent to Responder FRMC. |

2.17. Additional Reporting Scenarios

2.17.1. GTC Order Routed to Exchange, Modified by Customer

The following scenario illustrates the CAT reporting requirements when an Industry Member receives a multi-day order from a customer, and routes the order to an exchange as a DAY order.

When the Industry Member receives the order from the customer, the order is reported to CAT as a GTC order. When the Industry Member routes the order to the exchange for execution, the order is routed as a

"DAY" order, and must be reported to CAT as a "DAY" on the Order Route event reported by the Industry Member as well as relevant Participant events as outlined in the [CAT Reporting Technical Specifications for Plan Participants](#). The Industry Member must submit an Order Route event every day that the order is sent to the exchange until the order is executed or cancelled.

On T+1, the customer modifies the GTC order. Broker 1 must report an Order Modified event with the original order date and an Order Route event for the modification on the exchange.

Industry Member Broker 1 is required to report:

- The receipt of the customer GTC order on T (New Order event)
- The route of the order to the exchange on T as a "DAY" order (Order Route event)
- The route of the order to the exchange on T+1 (start of day) as the order was not executed or cancelled on T (Order Route event)
- The receipt of the customer request on T+1 (*requestTimestamp* on Order Modified event)
- The confirmation of the modification on T+1 (during market hours) (*eventTimestamp* on Order Modified event)
- The route of the modification to the exchange on T+1 (Order Route event)

In this scenario, Broker 1 is not required to report a Route Cancelled event for the route that was sent to the Exchange on T, as the route was a "DAY" order that expired at the end of the day.

Industry Members are required to capture the *eventTimestamp* in Order Modified events reflecting the time the order was modified (e.g., the time that the order was confirmed to be modified in the firm's OMS/EMS). In this example, the *eventTimestamp* reflects the time that acknowledgement was received from the exchange. Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Modified event, or in a separate Order Modification Request event.

2.17.2. Retired Scenario

2.17.3. Retired Scenario

2.17.4. Order Fulfillment Amendment

This scenario illustrates the CAT reporting requirements when an Industry Member amends the price of a customer fill that was reported to CAT earlier that day, then amends the price of the customer fill again the next day. Refer to section 4.13.2 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

For the purpose of this example, details of order handling on the original day are not included.

Industry Member Broker 1 is required to report:

- The fill of the customer order on a Riskless Principal basis on Day T (Order Fulfillment event)
- The amendment of the price of the customer fill on day T (Order Fulfillment Amendment event)
- The amendment of the price of the customer fill on day T+1 (Order Fulfillment Amendment event)

2.17.5. Automated Investment Plan

This scenario illustrates the CAT reporting requirements when an Industry Member provides an Automated Investment Plan service, offering the ability for customers to buy securities on a recurring basis. In this scenario, two customers provide instructions to Industry Member Broker A to buy as much of security XYZ as possible for \$100.00 and \$50.00, respectively, on a weekly basis. Broker A aggregates both customer orders together to buy XYZ at a predetermined weekly date and time, generating a single representative order that will be used to facilitate the execution of both customer orders. The representative order is routed to an exchange where it is executed. Upon execution of the representative order, the Broker A fills each of the underlying customer orders on a Riskless Principal basis. Following the execution, the shares are then allocated to both customers participating in the Automated Investment Plan by Broker A, which is self-clearing.

Industry Member Broker A is required to report:

- Creation of the Buy order for Customer 1 pursuant to the Automated Investment Plan (New Order event with *handlingInstructions* value of 'AIP', 'NH' and 'CASH')
- Creation of the Buy order for Customer 2 pursuant to the Automated Investment Plan (New Order events with *handlingInstructions* value of 'AIP', 'NH' and 'CASH')
- The generation of a representative order for Customers 1 and 2 (New Order event)
- The route of the representative order to the exchange (Order Route event)
- The fill of each customer order on a Riskless Principal basis (Order Fulfillment events)
- The allocation of shares to the participating customers (Post-Trade Allocation events)

Explicit linkage between each customer order and the representative order is required in the *aggregatedOrders* field on the representative MENO and the *firmDetails* in each MEOF.

The allocation of shares to Broker A's original customers is reportable by the firm performing the allocation, which is generally the clearing or self-clearing firm processing the allocation. In this scenario, Broker A is a self-clearing firm and has the obligation to report the allocation events to CAT.

3. Option Scenarios and Examples

This section illustrates reporting scenarios for single leg electronic option events. Each example includes a process flow table and sample reporting values. Refer to Section 5 of the [CAT Reporting Technical Specifications for Industry Members](#), along with [Published Options guidance](#) and [Section K of the CAT FAQs regarding Options](#) for additional information.

3.1. Option Order Origination and Route Scenarios

This section illustrates the CAT reporting requirements when an order is received or originated, and is subsequently routed away from the firm for execution. Refer to Section 5.4 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

3.1.1. New Principal Option Order Routed to Exchange and Executed

This scenario illustrates the CAT reporting requirements when an Industry Member originates a new principal option order electronically, and electronically routes the order to an exchange where it is executed.

Industry Member Broker 1 is required to report:

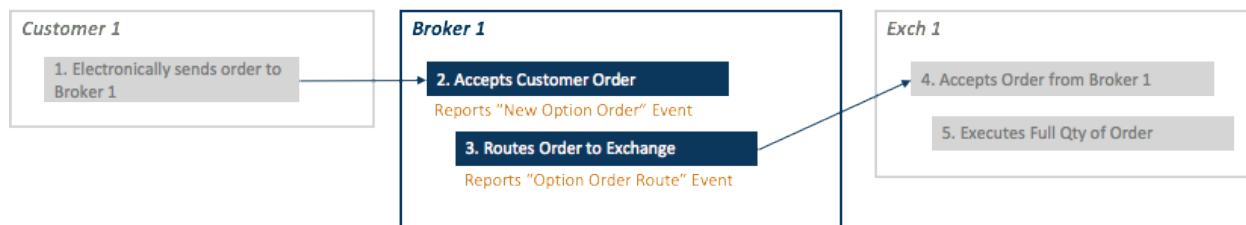

- The origination of a principal option order (New Option Order event)
- The route to an exchange (Option Order Route event)

3.1.4. Retired Scenario

3.1.5. Retired Scenario

3.2. Fulfillment Scenarios

3.2.1. Broker Receives Single Leg Electronic Orders, Creates a Combined Order and Routes the Combined Order to an Exchange

This scenario illustrates the reporting requirements when an Industry Member combines individual, simple option orders from customers before routing to an exchange as a single, simple order for execution. Refer to Section 5.11 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

Industry Member Broker 1 is required to report:

- The electronic receipt of each single leg customer order (New Option Order events)
- The generation of the combined order (New Option Order event)
- The route of the combined order to the exchange (Option Order Route event)
- The fill of each customer order (Option Order Fulfillment event)

The New Option Order event representing the combined order must be populated with a *representativeInd* value of 'O' indicating that the order is an Options Combined order. The Option Order Fulfillment events must be populated with a *fulfillmentLinkType* value of 'O' indicating that the order is an Options Order Fulfillment. Explicit linkage between the customer orders and the combined order is required.

3.3. Option Order Modification Scenarios

This section illustrates CAT reporting requirements for single leg option order modification scenarios. In addition to the scenarios provided below, please refer to Equity Event Section 2.4.8. This guidance also applies to single leg electronic option order reporting. Refer to Section 5.8 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

3.3.1. Customer Requests the Modification of an Option Order that was Previously Routed to an Exchange

This scenario illustrates a customer requested modification (electronically) of an option order which the Industry Member had previously routed to an exchange.

Industry Member Broker 1 is required to report:

- The electronic receipt of the customer order (New Option Order event)
- The route of the order to the exchange (Option Order Route event)
- The electronic receipt of the customer modification request (*requestTimestamp* on Option Order Modified event)
- The cancellation of the original route to the exchange (Option Route Cancelled event)
- A new route to the exchange (Option Order Route event)
- The confirmation of the customer modification (*eventTimestamp* on Option Order Modified event)

| # | Step | Reported Event | Comments |

3.4. Cancellation Scenarios

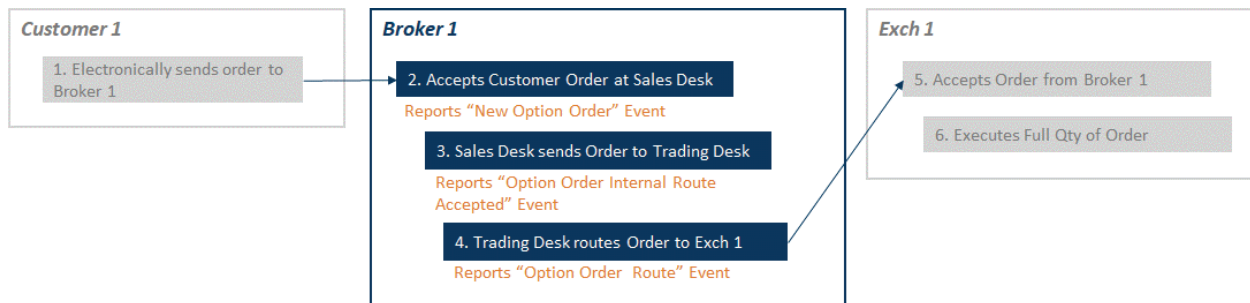

Option Order Cancelled events follow the same guidance as Order Cancelled events for equities. In addition to the scenarios provided below, refer to Equity Event Section 2.6. The guidance also applies to single leg electronic option order reporting. Refer to Section 5.9 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

3.5. Internal Route Scenarios

This section illustrates the CAT reporting requirements when an order is passed to a different department or desk within a *CATReporterIMID*. Refer to Section 5.6 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

3.5.1. Customer Option Order Internally Routed Electronically

This scenario illustrates the CAT reporting requirements when an Industry Member internally routes a customer order from the Sales Desk to the Trading Desk.

Industry Member Broker 1 is required to report:

- The electronic receipt of the customer order (New Option Order event)
- The internal route of the order from the Sales Desk to the Trading Desk (Option Order Internal Route Accepted event)
- The route of the order to the exchange (Option Order Route event)

| # | Step | Reported Event | Comments |
|---|--|---|--|
| 1 | Customer electronically sends an option order to Broker 1 | NA | |

| 6 | Exchange 1 executes the order | Exchange reports a Participant <i>Simple Option Trade event</i> | |

3.5.2. Order is Routed Internally and Child Orders are Generated Prior to Routing

This scenario illustrates the CAT reporting requirements when an Industry Member routes an order internally from the Sales Desk to the Trading Desk, and the Trading Desk generates child orders. The

child orders are then routed to exchanges for execution.

Industry Member Broker 1 is required to report:

- The electronic receipt of the customer order (New Option Order event)
- The internal route of the order from the Sales Desk to the Trading Desk (Option Order Internal Route Accepted event)
- The generation of child orders by the Trading Desk (Child Option Order events)
- The route of each child order to an exchange (Option Order Route events)

| # | Step | Reported Event | Comments |

3.6. Complex Order Scenarios

This section illustrates the CAT reporting requirements when handling complex orders. Refer to Section 5 of the [CAT Reporting Technical Specifications for Industry Members](#) and [CAT FAQ K2](#) for additional information.

3.6.1. Industry Member Receives and Routes an Exchange Defined Complex Option Order to be Executed on the Exchange

This scenario illustrates CAT reporting requirements when an Industry Member receives a complex multi-leg order from a customer electronically, and then routes the order to an exchange for execution.

Industry Member Broker 1 is required to report:

- The electronic receipt of the customer complex order (Multi-Leg New Order event)
- The route of the complex order to the exchange (Multi-Leg Order Route event)

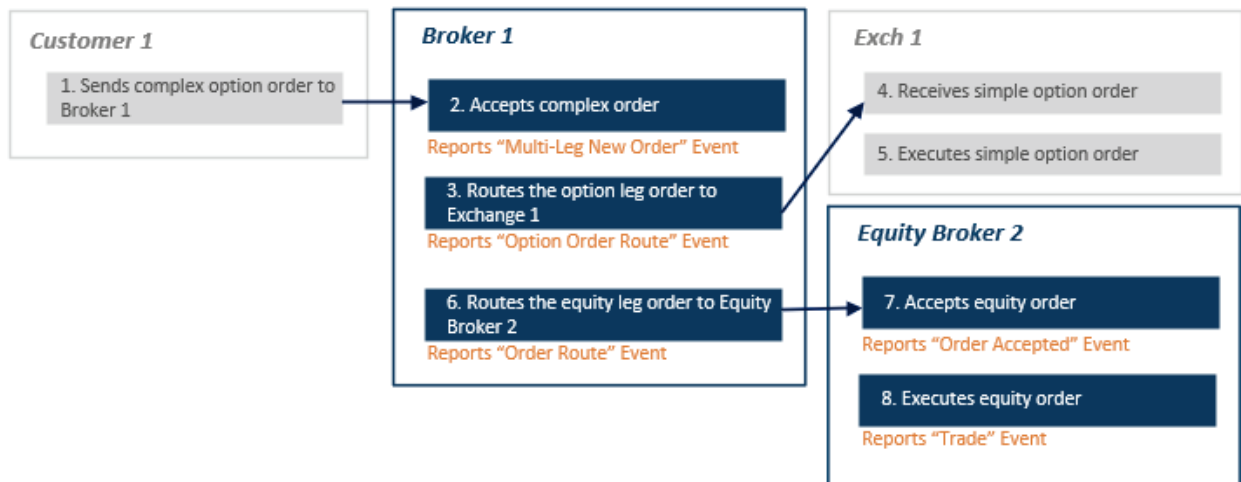

| # | Step | Reported Event | Comments |
|---|--|---|----------|

3.6.2. Industry Member Receives a Complex Option Order Which is worked as Individual Single Order Legs in the Customer's Account

This scenario illustrates CAT reporting requirements when an Industry Member receives a complex option order from a customer, but routes the individual leg orders to external execution venues.

Industry Member Broker 1 is required to report:

- The receipt of the complex option order from the customer (Multi-Leg New Order event)
- The route of the single leg option order to the exchange (Option Order Route event)
- The route of the equity leg order to Equity Broker 2 (Order Route event)

Industry Member Equity Broker 2 is required to report:

- The receipt of the equity order from Broker 1 (Order Accepted event)
- The execution of the order from Broker 1 (Trade event)

3.6.3. Industry Member Receives a Complex Order Manually Followed by Individual FIX Messages for Each Leg

This scenario illustrates CAT reporting requirements when an Industry Member Broker 2 receives a complex/multi-leg order verbally from Industry Member Broker 1, then receives individual FIX order messages electronically for each of the leg components. In this scenario, the Industry Member 1 is unable to send multi-leg order messages electronically due to system limitations and can only send individual leg orders electronically via FIX.

Both Industry Members are required to report the manual route/receipt of the complex order using a Multi-Leg New Order event. The order is considered routed/received once all the terms of the order are agreed, including all leg details and the net price. This is true whether electronic FIX messages are sent/received prior to or after the complete order instruction from the client.

Industry Member Broker 1 is required to report:

- The origination of the complex option order (Multi-Leg New Order event)
- The route of the complex option order to Broker 2 (Multi-Leg Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the complex option order from Broker 1 (Multi-Leg Order Accepted event)
- The route of the complex option order to the exchange (Multi-Leg Order Route event)

Industry Member Broker 1 is NOT required to report:

- The individual leg orders sent electronically to Broker 2

Industry Member Broker 2 is NOT required to report:

- The receipt of the individual leg orders received electronically from Broker 1
- Any trade/fulfillment events on the individual leg orders.

If either Industry Member chooses to report order events for the individual leg messages, the *handlingInstructions* field must be populated with a value of 'CMPX'. If Broker 2 received the order from a customer that was not a CAT reporter, then Broker 2 must follow the same guidance using a Multi-Leg New Order event instead of a Multi-Leg Order Accepted event.

3.6.4. Retired Scenario

3.6.5. Complex Order is Routed as a Pair to an Exchange for Execution

This scenario illustrates the CAT reporting requirements when an Industry Member routes an exchange defined complex order to an exchange as a pair for execution. In this scenario, Broker 1 receives a customer order for an exchange defined complex option. Broker 1 originates a proprietary order to take the other side, and routes the orders as a pair to an exchange for execution.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (Multi-Leg New Order event)

- The origination of the proprietary order (Multi-Leg New Order event)
- The route of the multi-leg orders to the exchange as a pair (Multi-Leg Order Route events)

Since the multi-leg orders were routed to the exchange as a pair, both Order Route events must contain the same *pairedOrderID*.

3.6.6. Industry Member Receives a Complex Option Order and Routes Option Legs as QCC to an Exchange

This scenario illustrates CAT reporting requirements when an Industry Member receives a complex option order from a customer, and routes the option legs to an exchange as a Qualified Contingent Cross (“QCC”).

In this scenario, an Industry Member receives an order from a customer to trade a complex option. The Industry Member creates a proprietary order to take the other side. The option legs are routed to an exchange as a paired complex order for further execution. The equity legs are routed to Equity Broker 2 for further execution.

Industry Member Broker 1 is required to report:

- The receipt of the complex option order from the customer (Multi-Leg New Order event)

- The creation of the new proprietary order (Multi-Leg New Order event)
- The route of the paired complex option orders to the Option Exchange (Multi-Leg Order Route events with the same *pairedOrderID*)
- The routes of the equity leg orders to Equity Broker 2 (Order Route events)

Industry Member Equity Broker 2 is required to report:

- The receipt of the orders from Broker 1 (Order Accepted events with *handlingInstructions* 'OPT')
- The execution of the orders (Trade event)

In this scenario, Broker 1 receives a complex order and originates a contra-side order with two option legs and one equity legs. The *numberOfLegs* field must be populated with a value of '3', and the *legDetails* must reflect the details of each leg. Broker 1 then routes the equity legs to an equity broker for crossing, and routes the option legs as a paired complex order to the exchange. The Multi-Leg Order Route events reported by Broker 1 must reflect the *numberOfLegs* field with a value of '2', and the *legDetails* must reflect the details of each option leg.

While the *numberOfLegs* is different on the Multi-Leg New Order events and related Multi-Leg Order Route events, this will be accepted by CAT and will not result in any errors, as *legDetails* are not used for intrafirm linkage.

3.6.7. Industry Member Receives a Complex Option Order with Different Leg Ratio Format

This scenario illustrates CAT reporting requirements when an Industry Member receives a complex option order from a customer with leg ratio specified as the full leg quantity, but must reduce the leg ratios to their simplest form (sometimes known as “Lowest Common Factor” or “LCF”) in order to route the order to an exchange.

In the example above, the customer entered an order to buy 100 contracts of leg 1 and sell 150 contracts of leg 2. Most exchange protocols require that complex option orders be sent with the leg ratio reduced to the smallest possible whole numbers, so Broker 1 must calculate the LCF and route the order to the exchange using this format. In this example, they reduce the leg ratios from 100/150 to 2/3, and increase the order quantity accordingly (from 1 to 50).

The net price was also mathematically translated to the new “Per Unit” amount in this example, but FINRA CAT will accept any valid priceType in the spec data dictionary. The net price format is not tied to the leg ratio format. CAT reporters should report these values exactly as they are sent on the order.

Industry Member Broker 1 is required to report:

- The receipt of the complex option order from the customer (Multi-Leg New Order event)
- The route of the order to the Option Exchange (Multi-Leg Order Route event)

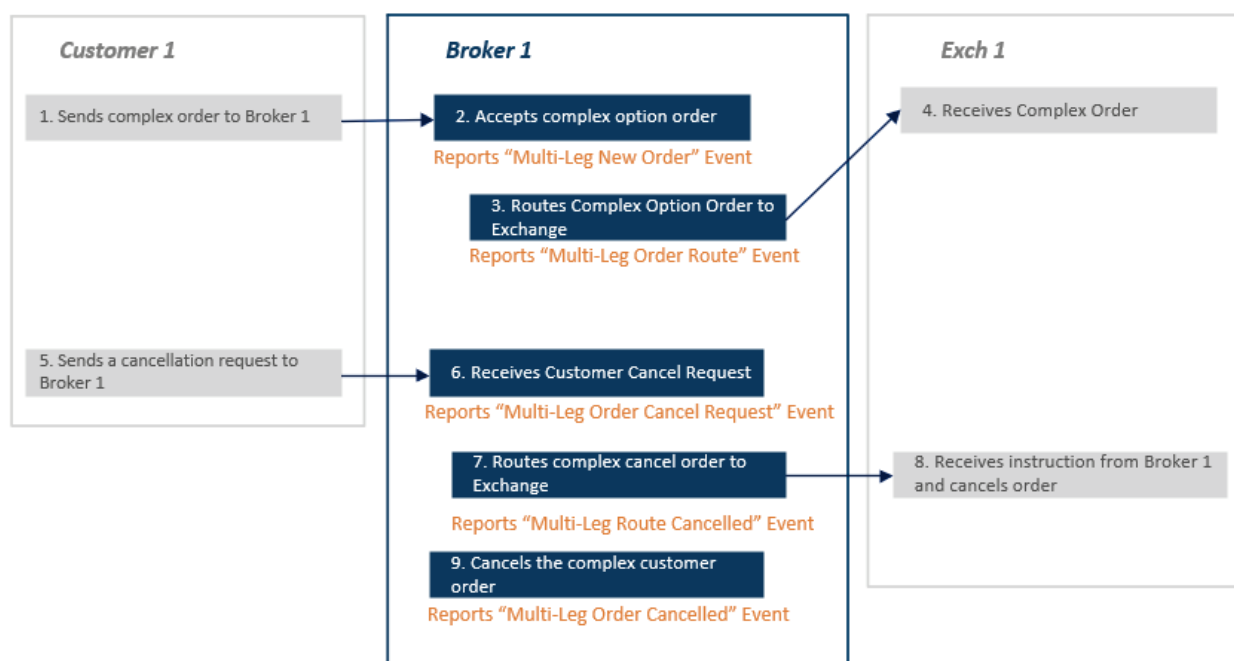

| # | Step | Reported Event | Comments |

3.6.8. Industry Member Cancels a Previously Routed Complex Order

This scenario illustrates the CAT reporting requirements when an Industry Member cancels a complex order that was previously routed to an exchange.

In this scenario, an Industry Member receives a complex order from a customer electronically, and then routes the order to an exchange for execution. The industry member receives a subsequent cancel request from the customer and cancels the previously routed order.

Industry Member Broker 1 is required to report:

- The receipt of the complex order from the customer (Multi-Leg New Order event)
- The route of the complex order to the exchange (Multi-Leg Order Route event)
- The receipt of the complex order cancellation request from the customer (Multi-Leg Order Cancel Request event)
- The cancellation of the complex exchange route (Multi-Leg Cancel Route event)
- The confirmation of the cancellation of the complex order (Multi-Leg Order Cancel event)

Industry Members are required to capture the *eventTimestamp* in Multi-Leg Order Cancelled events reflecting the time the order was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Multi-leg Order Cancelled event, or in a separate Multi-leg Order Cancel Request event. In this example, the *eventTimestamp* reflects the same time that the time that acknowledgement was received from the exchange. In this example, the request time is captured in a separate Multi-Leg Order Cancel Request event.

3.6.9. Industry Member Cancels a Complex Option Order Previously Routed as Individual Single Order Legs

This scenario illustrates the CAT reporting requirements when an Industry Member cancels a complex order that was previously routed to an exchange as individual single order legs to external execution venues.

In this scenario, an Industry Member receives a complex order from a customer electronically. The Industry Member routes the options leg to an options exchange for execution and routes the equity leg to Equity Broker 2 for execution. The Industry Member receives a subsequent cancel request from the customer to cancel the complex order. The Industry Member cancels the options route that was sent to the options exchange, cancels the equity route that was sent to Equity Broker 2, and confirms the cancellation of the complex order.

Industry Member Broker 1 is required to report:

- The receipt of the complex option order from the customer (Multi-Leg New Order event)
- The route of the single leg option order to the exchange (Option Order Route event)
- The route of the equity leg order to Equity Broker 2 (Order Route event).
- The receipt of the complex option cancellation request (*requestTimestamp* in Multi-Leg Order Cancelled event)
- The confirmation of the cancellation of the complex option order (*eventTimestamp* in Multi-Leg Order Cancelled event)
- The cancellation of the route of the option leg to the exchange (Option Route Cancelled event)
- The cancellation of the route of the equity leg to Equity Broker 2 (Route Cancelled event)

Industry Member Equity Broker 2 is required to report:

- The receipt of the equity order from Broker 1 (Order Accepted event)
- The receipt of the cancellation request from Broker 1 (*requestTimestamp* in Order Cancelled event)
- The confirmation of the cancellation of order from Broker 1 (*eventTimestamp* in Order Cancelled event)

Industry Members are required to capture the *eventTimestamp* in Order Cancelled events reflecting the time the order was cancelled (e.g., the time that the order was confirmed to be cancelled in the firm's OMS/EMS). Industry Members are also required to capture the time that the request was received from the customer in the *requestTimestamp* field in the Order Cancelled event, or in a separate Order Cancel Request event. In this example, the *eventTimestamp* reflects the same time that the time that the request

was received. In this example, the request time is captured in the *requestTimestamp* field in the Order Cancelled events.

3.6.10. Industry Member Receives a Complex Order with too many Legs to Report in a Single Multi-Leg Order Message

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 receives a Multi-Leg order with 12 options legs from a customer electronically.

While there is no maximum number of legs that can be included in any Multi-Leg order event, there is a maximum total length of 8190 bytes for a CAT record, as outlined in the [CAT Reporting Technical Specifications for Industry Members](#). This limitation applies to both JSON and CSV formats. Messages larger than 8190 bytes will be rejected. Each CAT submitter is responsible for ensuring their activity is reporting within stated byte limitations.

Broker 1 splits reporting of the 12 legs into two CAT events so as to not exceed the 8190 byte size limit. In this example, Broker 1 uses long values in the *legRefID* field, which allow for up to 64 characters. In order to not exceed the 8190 bytes, Broker 1 limits the number of legs to 10 on the applicable CAT events.

Industry Member Broker 1 is required to report:

- The receipt of the multi-leg option order from the customer (Multi-Leg New Order event and one Multi-Leg Supplement event)
- The route of the multi-leg option order to Broker 2 (Multi-Leg Order Route event and one Multi-Leg Order Supplement event)

Industry Member Broker 2 is required to report:

- The receipt of the multi-leg order from Broker 1 (Multi-Leg Order Accepted event)

3.6.11. Upstairs Market Maker Originates Proprietary Multi-leg Order and Routes to Floor Broker

This scenario illustrates the CAT reporting requirements when an Upstairs Market Maker originates a proprietary multi-leg order and routes the order to an Industry Member Floor Broker for execution. In this scenario, Upstairs Market Maker 1 originates an order for their own proprietary account, and routes the order with a Total Cash net price for the strategy to Floor Broker 1 to execute on exchange.

Industry Member Upstairs Market Maker 1 is required to report:

- The origination of the multi-leg option order (Multi-Leg Order Accepted events)
- The route of the multi-leg order at a Total Cash net price to Floor Broker 1 (Multi-Leg Order Route)

Industry Member Floor Broker 1 is required to report:

- The receipt of the multi-leg option order from Upstairs Market Maker 1 (Multi-Leg Order Accepted event)
- The route of the multi-leg option order to the exchange at a Per Unit net price for execution (Multi-Leg Order Route event)

Options exchange is required to report as outlined in the CAT Reporting Technical Specifications for Plan Participants.

3.7. RFQ and Solicitation Response Scenarios

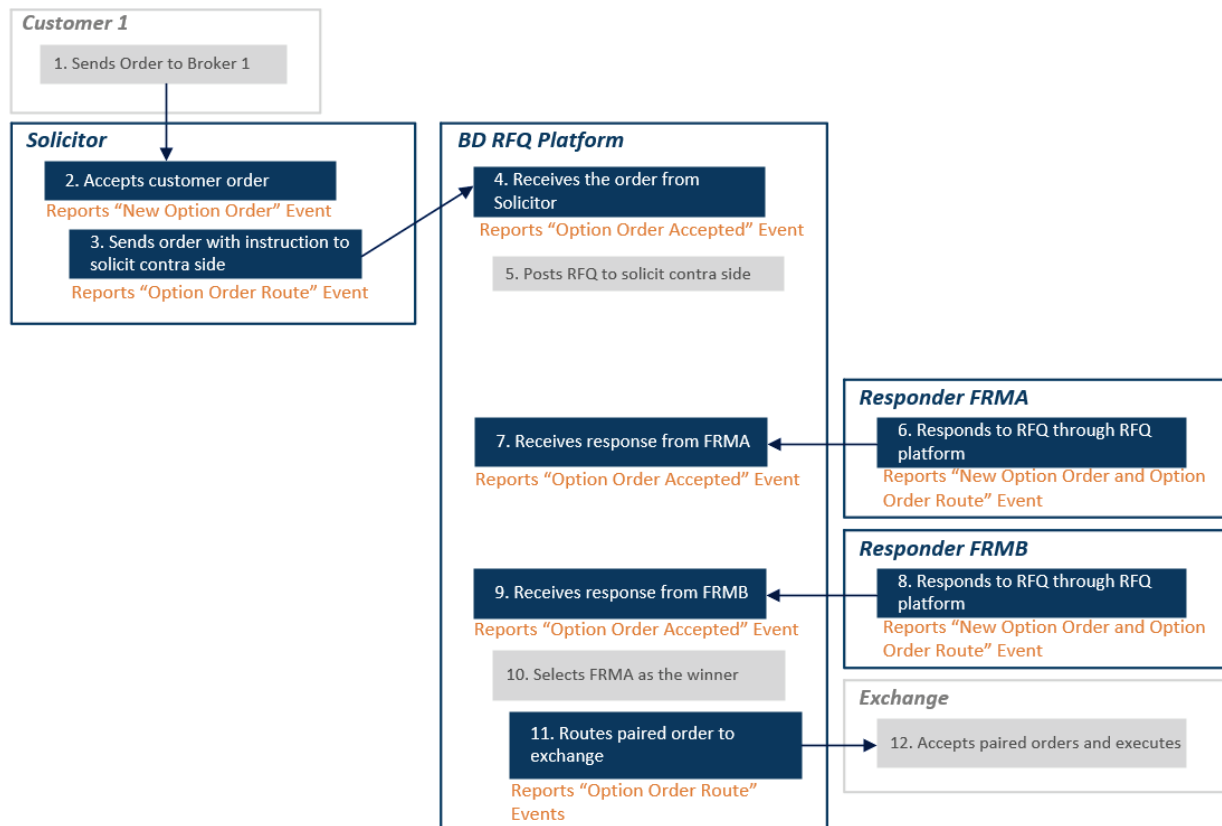

This section illustrates the CAT reporting requirements for responses to RFQs (Request for Quote) and other forms of solicitation. Refer to [Section 2.16](#) for additional RFQ and Solicitation Response scenarios that apply to both Equity and Options order flow.

3.7.1. Retired Scenario

3.7.2. Retired Scenario

3.7.3. Response to RFQ is Sent Through an RFQ Platform operated by a Broker-Dealer

This scenario illustrates the CAT reporting requirements when an Industry Member (Solicitor) receives a customer order and sends the customer order to an Industry Member broker-dealer that operates an RFQ platform (BD RFQ Platform) with instructions to issue an RFQ to solicit the contra side. The broker-dealer operating the RFQ platforms sends out the RFQ and multiple Industry Members (Responders) respond to the RFQ directly through the RFQ platform. The broker-dealer operating the RFQ platform selects the winning response and routes the customer order and the selected response as a paired order to an exchange for execution.

The Solicitor is required to report the following:

- The receipt of a customer order (New Option Order event)
- The route of the customer order to the BD RFQ Platform (Option Order Route event)

Each Responder is required to report the following:

- The origination of a proprietary order (New Option Order event *solicitationFlag* as 'true' and the *RFQID* populated)
- The route of the order to the BD RFQ Platform (Option Order Route event)

The BD RFQ Platform is required to report the following:

- The receipt of the customer order from the Solicitor (Option Order Accepted event)
- The receipt of responses from each Responder, including those that were not selected (Option Order Accepted event with *solicitationFlag* as 'true')
- The route of the customer order from the Solicitor and the order from the winning Responder as a paired order to the exchange (Order Route events with the same *pairedOrderID* populated)

All orders received or originated after the selection of a winning bid to facilitate the execution of such bid as the result of such RFQ or solicitation process must be reported and must be identified as being part of an RFQ or solicitation process subject to the phasing requirements as set forth in the CAT Reporting Technical Specifications for Industry Members as outlined in [FAQ B45](#).

3.7.4. Industry Member Receives a Customer Order and Solicits the Contra Side, then Routes the Orders as a pair to an Exchange for Execution

This scenario illustrates the CAT reporting requirements when an Industry Member electronically receives a simple option from a customer for 10 contracts and manually solicits Industry Member Broker 2 to pair the order. Broker 2 responds verbally to the solicitation and agrees to take the other side of the order. The Solicitor accepts Broker 2's response and Broker 2 verbally originates and routes an order to the Solicitor. The Solicitor accepts Broker 2's response and Broker 2 verbally originates and routes an order to the Solicitor.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Option Order event)
- The receipt of the order from Broker 2 (Option Order Accepted event)
- The route of the paired order to the exchange (Option Order Route events with the same *pairedOrderID*)

Industry Member Broker 2 is required to report:

- The origination of a New Order for the selected response (New Order event)
- The route of the order to the Broker 2 (Order Route event)

Industry Members are not required to report RFQs or other forms of solicitation to CAT. Responses to RFQs or other forms of solicitation that are communicated manually (e.g. Phone, Instant Message) are not required to be reported to CAT in Phase 2d. However, this activity is expected to become required in 2023. While Broker 2 is not required to report its response to solicitation from Broker 1 to CAT, Broker 2

must report the origination and route of the order to Broker 1 once selected. The *solicitationFlag* must not be populated as 'true' on events originated after selection of the winning bid.

3.7.5. Industry Member Receives a Customer Order and is Only Able to Pair a Portion of the Order

This scenario illustrates the CAT reporting requirements when an Industry Member electronically receives a simple option from a customer for 100 contracts and manually solicits Industry Member Broker 2 to pair the order. Broker 2 responds manually to the solicitation and agrees to take the other side for only 60 contracts. The Solicitor accepts Broker 2's response, and Broker 2 then originates and routes an order to the Solicitor. Broker 1 is then left with 40 contracts of the customer order, which is routed to the exchange as a simple option order.

Industry Member Broker 1 (Solicitor) is required to report:

- The receipt of the customer order (New Option Order event)
- The receipt of the order from Broker 2 (Option Order Accepted event)
- The route of the paired order to the exchange (Option Order Route events with the same *pairedOrderID*)
- The route of the un-paired quantity of the single leg order to an exchange (Option Order Route event)

Industry Member Broker 2 (Responder) is required to report:

- The origination of a New Order for the selected response (New Order event)
- The route of the order to the Broker 2 (Order Route event)

Responses to RFQs or other forms of solicitation that are communicated manually (e.g. Phone, Instant Message) are not required to be reported to CAT in Phase 2d. However, this activity may be required in future phases of CAT.

The *solicitationFlag* is not required to be populated as 'true' on events originated after selection of the winning bid. Refer to [CAT FAQ B45](#) for additional information.

3.7.6. Floor Broker Solicits the Contra Side of a Multi-Leg Order and Routes the Equity Leg Orders to the Responder for Execution

This scenario illustrates the CAT reporting requirements when a non-FINRA Member Floor Broker receives a multi-leg order from non-FINRA Member Broker 1, and solicits FINRA Member Broker 3 over

the phone to take the other side. Broker 3 responds positively to the solicitation over the phone and routes an order to the floor broker. Since Broker 3 is the only FINRA Member firm involved in the transaction, the floor broker prices the equity legs and routes the equity legs to Broker 3 for crossing. The option legs are routed to an options exchange for execution.

Non-FINRA Member Broker 1 is required to report:

- The origination of the multi-leg order (Multi-Leg New Order event)
- The route of the multi-leg order to the floor broker (Multi-Leg Order Route event)

The non-FINRA Member Floor Broker is required to report:

- The receipt of the multi-leg order (Sell) from Broker 1 (Multi-Leg Order Accepted event)
- The receipt of the multi-leg order (Buy) from Broker 3 (Multi-Leg Order Accepted event)
- The route of the equity legs to Broker 3 for execution (Order Route events)
- The route of the option legs to an exchange for execution (Option Order Route events)

FINRA Member Broker 3 is required to report

- For the order originated as a result of solicitation:
 - The origination of the multi-leg order a result of solicitation (Multi-Leg New Order event)

- The route of the multi-leg order to the floor broker (Multi-Leg Order Route event)
- For the equity legs received from the floor broker:
 - The receipt of both equity legs from the floor broker (Order Accepted events with *handlingInstructions* 'OPT')
 - The execution of the equity legs (Trade event)

Both parties are required to report the route/receipt of the multi-leg order from Broker 3 to the floor broker, and the route/receipt of the equity legs from the floor broker to Broker 3 for execution.

Industry Members are not required to report RFQs or other forms of solicitation to CAT. Responses to RFQs or other forms of solicitation that are communicated manually (e.g. Phone, Instant Message) are not required to be reported to CAT in Phase 2d. However, this activity is expected to become required in 2023. The *solicitationFlag* is not required to be populated as 'true' on events originated after selection of the winning bid.

3.7.7. Broker Solicits Upstairs Market Maker for Contra Side

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 receives a customer order for a multi-leg option order and solicits the contra side order from an Upstairs Market Maker.

In this scenario, Broker 1 receives a multi-leg option order with an equity leg from Customer 1. Broker 1 then manually solicits the contra side of Customer 1's order from Upstairs Market Maker 1 by Instant Message. Upstairs Market Maker 1 provides a verbal quote and agrees to provide a contra side order at a specified price. Broker 1 accepts Upstairs Market Maker 1's order, and electronically routes a paired order for the option legs to Exchange 1's crossing mechanism. Broker 1 also sends the two offsetting orders for the equity leg to an Institutional Equity Broker to be crossed. Institutional Equity Broker 2 executes a cross trade for the two equity orders on the TRF.

Industry Member Broker 1 is required to report:

- The receipt of the multi-leg option order from the Customer (Multi-Leg New Order event)
- The acceptance of the multi-leg option order from the upstairs market maker (Multi-Leg Order Accepted event)
- The route of the paired multi-leg orders for the option legs to Exchange (Multi-Leg Order Route events)
- The route of the offsetting equity legs to Institutional Equity Broker 2 (Order Route events)

Industry Member Upstairs Market Maker 1 is required to report:

- The origination of the contra side multi-leg order (Multi-Leg New Order event)
- The manual route of the multi-leg order to Broker 1 (Multi-Leg Order Route event)

Industry Member Institutional Equity Broker 2 is required to report:

- The acceptance of the equity leg orders from Broker 1 (Order Accepted event)
- The execution of the equity leg trade (Trade event)

Exchange is required to report as outlined in the CAT Reporting Technical Specifications for Plan Participants.

3.8. Additional Options Reporting Scenarios

3.8.1. Response to an Exchange Auction

This scenario illustrates the CAT reporting requirements when an Industry Member originates a proprietary option order in response to an Exchange Auction of a simple option or paired order of simple options. Refer to [CAT FAQ K3](#) for additional information.

Industry Member Market Maker 1 is required to report:

- The origination of the proprietary order (New Option Order event)
- The response to the exchange auction (Option Order Route event)

The Industry Member is required to report the auction details in the *handlingInstructions* field using the name/value pair 'AucResp', which must be paired with the AuctionID value.

| # | Step | Reported Event | Comments |
|---|--|--|---|
| 1 | Exchange 1 announces auction | NA | |
| 2 | Market Maker 1 originates a prop option order in response to the auction | Market Maker 1 reports a <i>New Option Order Event</i> type: MONO orderKeyDate: 20180516T000000 orderID: OA76543 optionID: XYZ 180810C00001925 eventTimestamp: 20180516T133031.1234 deptType: T side: B price: 5 quantity: 10 orderType: LMT timeInForce: IOC tradingSession: REG handlingInstructions: AucResp=1a95 FOK firmDesignatedID: P999 accountHolderType: P affiliateFlag: false openCloseIndicator: Open representativeInd: N | Orders originated in response to an auction must have the <i>handlingInstructions</i> field populated with a value of 'AucResp', which is a Name/Value pair requiring the Auction ID value. |
| 3 | Market Maker 1 routes response to Exchange 1 | Market Maker 1 reports an <i>Option Order Route event</i> type: MOOR | Since the values in the <i>handlingInstructions</i> field have not changed from the New Order to the Order Route, MMFIRM1 may populate "RAR" in the |

Alternatively, firms have the option to re-state all <i>handlingInstructions</i> values. |
| 4 | Exchange 1 accepts the order bid from Market Maker 1 | <i>Exchange 1 reports a Participant Simple Option Order Accepted event</i> | |

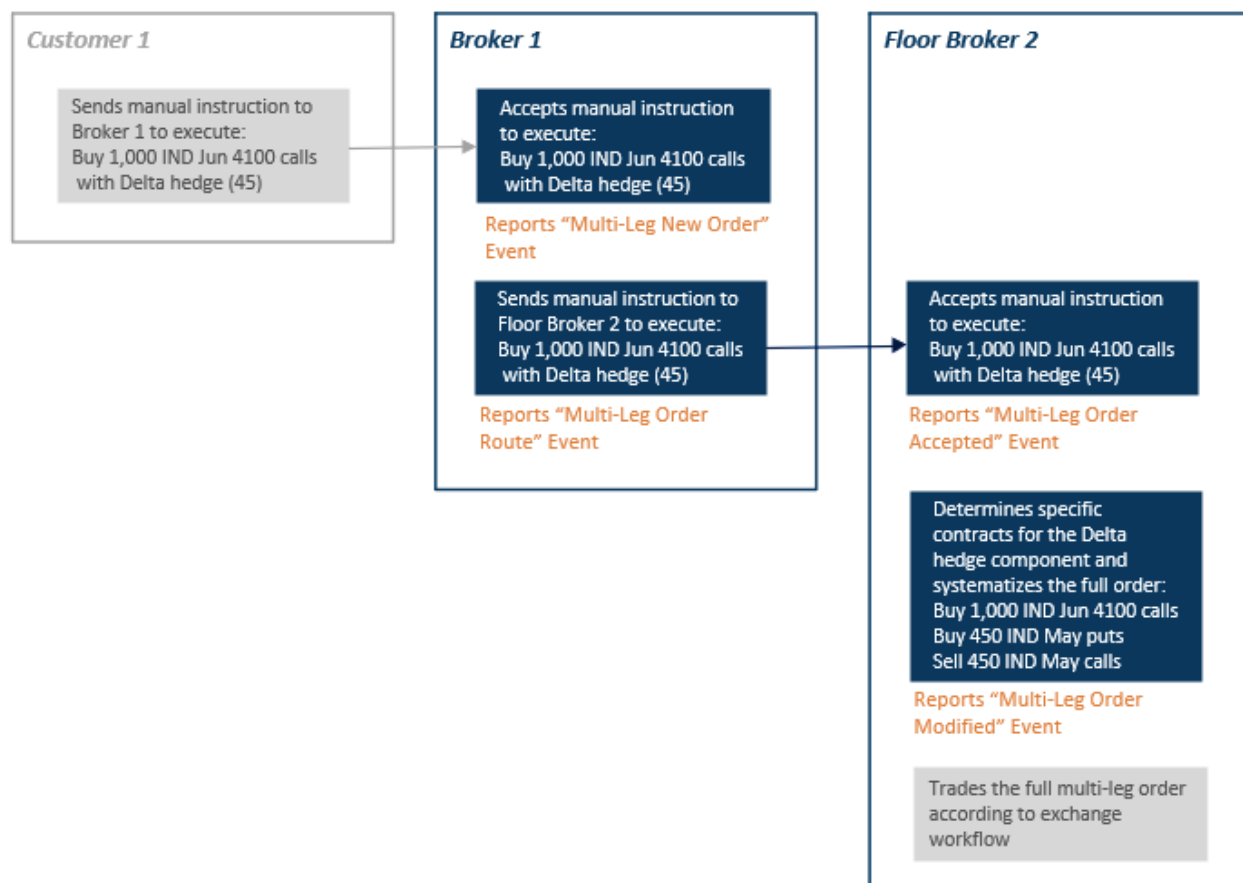

3.8.2. Broker Receives a Partially Formed Multi-Leg Order where not all Legs are Determined when Trading Authorization is Immediately Actionable

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 receives a customer order for a multi-leg option order where one or more of the legs are known at the time the instruction is given, but one or more additional legs will be determined by the floor broker based on market conditions. The partially formed order in this scenario is immediately actionable (i.e., no further action is required by the party providing the instruction in order for the receiver to execute or cause a trade to be executed), as described in [CAT FAQ K23](#). This guidance does not apply to scenarios where the multi-leg order does not become actionable until all leg details have been confirmed.

In this scenario, Broker 1 receives a multi-leg option order from Customer 1 to Buy 1,000 IND call with a “delta hedge” which will comprise two option contract series – sometimes referred to as a “combo order” – selling a call and buying a put with the same expiration date and strike price, and having the same underlying index as the primary order. Broker 1 accepts the immediately actionable instruction from Customer 1. Broker 1 then calls Floor Broker 2 and provides firm authorization to trade these instructions. Floor Broker 2 accepts this immediately actionable partially formed order and proceeds to

determine the specific contracts that would make up the combo, then systematizes the receipt of an order for the entire strategy (i.e., the primary series and the two series that make up the combo).

Floor Broker 2 then trades the order on exchange and reports any activity according to existing guidance. These floor trading steps are not included in this scenario for simplicity, but exchange-specific floor examples can be found in Section 8.

Industry Member Broker 1 is required to report:

- The receipt of the immediately actionable partially formed multi-leg option order from Customer 1 (Multi-Leg New Order event).
- The route of the immediately actionable partially formed multi-leg option order to Floor Broker 2 (Multi-Leg Order Route event)

There is optionality in reporting the leg details of these events. The Industry Member must report the details of the leg(s) that are known at the time the instruction to trade is immediately actionable. The events may optionally include the full set of legs, inclusive of the legs that are determined prior to execution. This flexibility is provided recognizing that Industry Members may not be able to systematize the order until all legs are known.

Industry Member Floor Broker 2 is required to report:

Option 1:

- The acceptance of the immediately actionable partially formed multi-leg order (Multi-Leg Order Accepted event)
- The modification of the multi-leg order to include the full set of legs once all leg instruments have been determined- (Multi-Leg Order Modification event)

Option 2:

- The acceptance of the multi-leg order that includes the full set of legs once all leg instruments have been determined (Multi-Leg Order Accepted event)

Note that reporting structure chosen by Broker 1 and Floor Broker 2 do not need to match. Broker 1 may choose to report only the leg(s) known at the time of the order route, and Floor Broker 2 may choose to report the full set of legs on the order accepted event, or vice versa. The number of legs reported will not impact linkage or lifecycle processing.

4. Error Account Scenarios

This section illustrates reporting requirements for reporting bona fide errors and activity occurring in an error account. These scenarios are applicable to equivalent equities and options order flows.

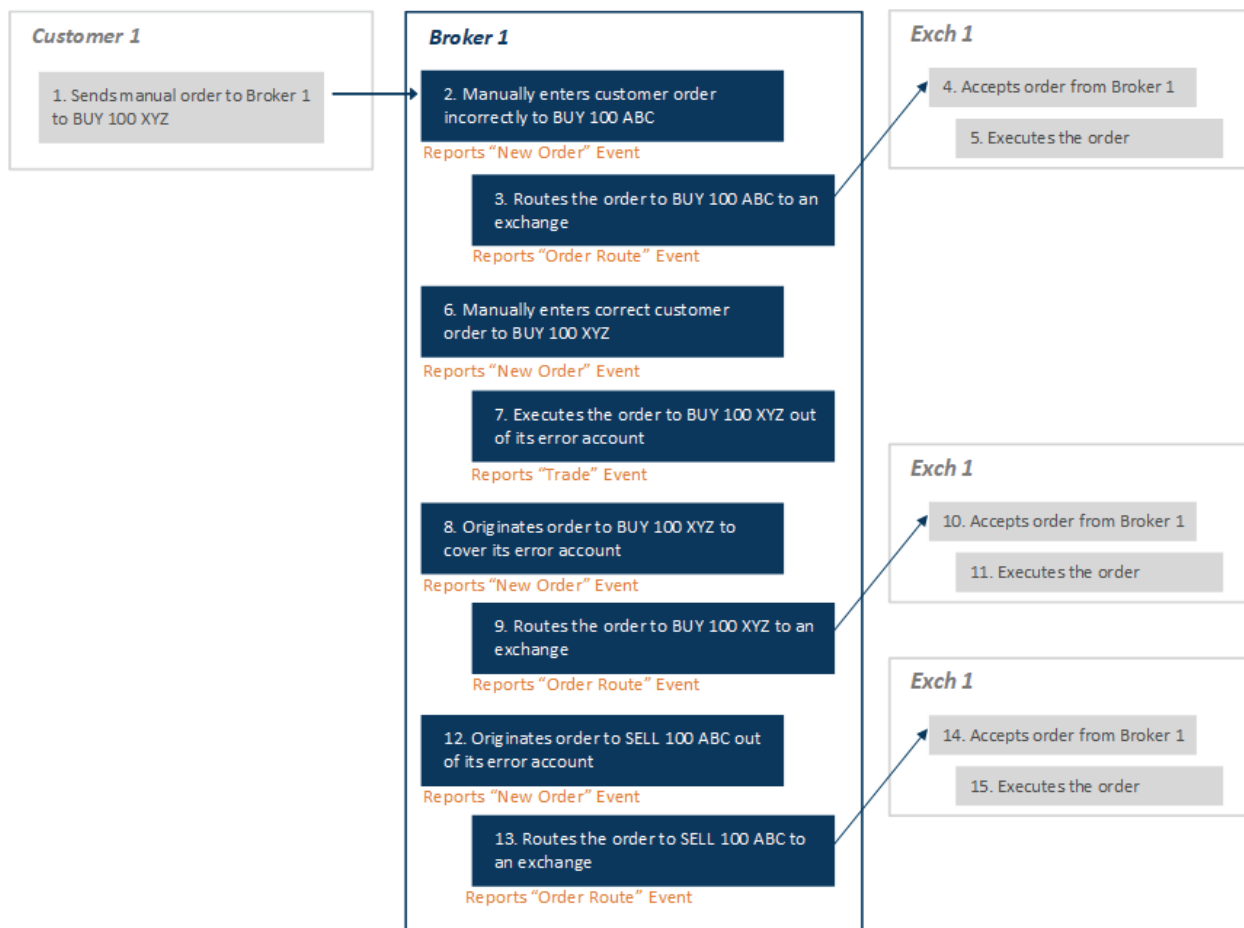

4.1. Equity Error Account Scenarios

4.1.1. Industry Member Purchases the Wrong Security for a Customer/Client in Error

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer/client order and purchases the wrong security in error. In this scenario, the customer/client places an order to buy 100 shares of XYZ over the phone, and in error, the Industry Member enters an order to buy 100 shares of ABC.

Once the Industry Member realizes the error, it moves 100 shares of ABC from the customer's/client's account to its error account, and executes the customer/client order for 100 shares of XYZ out of its error account at the price the stock was trading when the customer/client originally placed the order.

The Industry Member then purchases 100 shares of XYZ on an exchange for its error account to cover the shares sold to the customer/client, and sells the 100 shares of ABC purchased in error on an exchange from its error account.

When the firm places an order in error for symbol ABC, Industry Member Broker 1 is required to report:

- The entry of the customer/client order to buy the wrong security ABC (New Order event)
- The route of the order to buy ABC to an exchange (Order Route event)

When the firm realizes and corrects the error, Industry Member Broker 1 is required to report:

- The entry of the customer/client order to buy the correct security XYZ (New Order event)
- The fill of the customer/client order for symbol XYZ from the firm's error account (Trade event)
- The origination of an order to buy XYZ to cover the firm's error account (New Order event)
- The route of the buy order for XYZ to an exchange (Order Route event)
- The origination of an order to sell the shares of ABC purchased in error (New Order event)

- The route of the sell order for ABC to an exchange (Order Route event)

The movement of the shares from the customer/client account to the error account is not reportable to CAT, as internal security movements and journal entries are not reportable to CAT.

4.1.2. Customer/Client Places an Order in Error and the Industry Member Elects to Correct the Error as an Accommodation to the Customer/Client

This scenario illustrates the CAT reporting requirements when a customer/client places an order to purchase the wrong security, and the Industry Member elects to correct the error as an accommodation to the customer/client. In this scenario, the customer/client places an order to buy 100 shares of XYZ, which is immediately executed by the Industry Member.

The customer/client then informs the Industry Member that they intended to buy 100 shares of ABC, and the Industry Member agrees to correct the error as an accommodation to the customer/client. The Industry Member executes the customer/client order for 100 shares of ABC from a proprietary account, and takes the 100 shares of XYZ from the customer/client account into a facilitation account (or other proprietary account to facilitate the correction of the error). The Industry Member then sells 100 shares of XYZ from its facilitation account (or other proprietary account) on an exchange.

For symbol XYZ, Industry Member Broker 1 is required to report:

- The receipt of the customer/client buy order placed in error (New Order event)
- The execution of the customer/client buy order from a proprietary account (Trade event)
- The origination of an order to sell the shares out of the facilitation (or other proprietary) account (New Order event)
- The route of the sell order to an exchange (Order Route event)

For symbol ABC, Industry Member Broker 1 is required to report:

- The receipt of the customer/client buy order in the correct security (New Order event)
- The execution of the customer/client buy order from a proprietary account (Trade event)

The movement of the shares from the customer/client account to the facilitation (or other proprietary) account is not reportable to CAT, as internal security movements and journal entries are not reportable to CAT.

4.1.3. Price Adjustment Through the Execution of a New Trade

This scenario illustrates the CAT reporting requirements when an Industry Member makes a price adjustment to a customer/client order by executing a new trade with the customer as principal. In this scenario, Industry Member Broker 1 receives a customer/client order to buy 1,000 shares of XYZ, and routes the order to Industry Member Broker 2 for execution at a price of 10.00 per share.

Industry Member Broker 1 determines that the customer/client should have received a price of 9.98 per share, and moves the 1,000 shares of XYZ executed at a price of 10.00 per share from the customer account to its error account. To affect the price adjustment to the customer, Industry Member Broker 1 sells the shares, as Principal, to the customer at 9.98 per share.

Industry Member Broker 1 is required to report:

- The receipt of the customer/client order (New Order event)
- The route of the order to Broker 2 (Order Route event)
- The execution of the order from the firm's error account at a price of 9.98 (Trade event)

Industry Member Broker 2 is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The execution of the order at a price of 10.00 (Trade event)

The movement of the shares from the customer/client account to the error account is not reportable to CAT, as internal security movements and journal entries are not reportable to CAT.

4.1.4. Industry Member Enters the Incorrect Side on a Customer/Client Order in Error

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer/client order and enters the incorrect side in error. In this scenario, the customer/client places an order to sell 100 shares of XYZ over the phone, and in error, the Industry Member enters an order to buy 100 shares of XYZ. The order is routed to an exchange for execution.

Once the Industry Member realizes the error, it moves the 100 shares of XYZ purchased in error from the customer's/client's account to its error account, and executes the customer/client order to sell 100 shares of XYZ out of its error account at the price the stock was trading when the customer/client originally placed the order.

The Industry Member then sells 200 shares of XYZ on an exchange for its error account to cover the shares acquired from the customer/client.

When the firm places an order in error to buy symbol XYZ, Industry Member Broker 1 is required to report:

- The entry of the customer/client order to buy the security in error (New Order event)
- The route of the buy order to an exchange (Order Route event)

When the firm realizes and corrects the error, Industry Member Broker 1 is required to report:

- The entry of the correct customer/client order to sell the security (New Order event)

- The fill of the customer/client order to sell XYZ from the firm's error account (Trade event)
- The origination of an order to sell the shares of XYZ acquired from the customer (New Order event)
- The route of the sell order to an exchange (Order Route event)

The movement of the shares from the customer/client account to the error account is not reportable to CAT, as internal security movements and journal entries are not reportable to CAT.

4.1.5. Industry Member Does Not Enter a Customer Order Until T+1

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer/client order and does not enter the customer order until T+1. In this scenario, the customer/client places an order to buy 100 shares of XYZ over the phone, and in error, the Industry Member enters the order on T+1. The order is routed to an exchange for execution.

Once the Industry Member realizes that the customer is due a price adjustment, it moves the 100 shares of XYZ from the customer's/client's account to its error account, and executes the customer/client order out of its error account at the price the stock was trading when the customer/client originally placed the order.

Industry Member Broker 1 is required to report:

- The receipt of the customer/client order (New Order event)
- The route of the order to the exchange (Order Route event)
- The execution of the order from the firm's error account at a price of 9.98 (Trade event)

The movement of the shares from the customer/client account to the error account is not reportable to CAT, as internal security movements and journal entries are not reportable to CAT.

4.1.6. Correction of a Trade Incorrectly Reported to a TRF/ADF/ORF

This scenario illustrates the CAT reporting requirements when an Industry Member makes a correction to a trade that was submitted to a TRF/ADF/ORF. In this scenario, Industry Member Broker 1 receives an order for 1,000 shares of XYZ at a price of 10.00 per share, and routes the order to Broker 2. Broker 2 executes the order at a price of 10.00 per share and reports the trade to the TRF, but incorrectly reports the trade as a sale of 10,000 shares at a price of 10.00. Broker 2 determines that the trade should have been reported with a quantity of 1,000 shares, and corrects the TRF report to reflect the correct shares quantity.

Industry Member Broker 1 is required to report:

- The receipt of an order for 1,000 shares (New Order event)
- The route of the order to Broker 2 (Order Route event)

Industry Member Broker 2 is required to report:

- The receipt of the order for 1,000 shares from Broker 1 (Order Accepted event)
- The execution of the order for 1,000 shares at a price of 10.00 (Trade event linking to the initially reported TRF report with a shares quantity of 10,000)

In its Trade event, Broker 2 should populate the *tapeTradeID* linking to the initially reported TRF report with an incorrect shares quantity of 10,000. In this scenario, Broker 2 is not required to submit any CAT reports reflecting the correction made in the TRF.

If the CAT Trade event was also submitted with an incorrect quantity of 10,000 shares, Broker 2 would be required to submit a correction to CAT correcting the quantity on the Trade event. Refer to Section 7.6 of the [CAT Reporting Technical Specifications for Industry Members](#) for instructions on submitting corrections to previously accepted CAT Events.

4.2. Options Error Account Scenarios

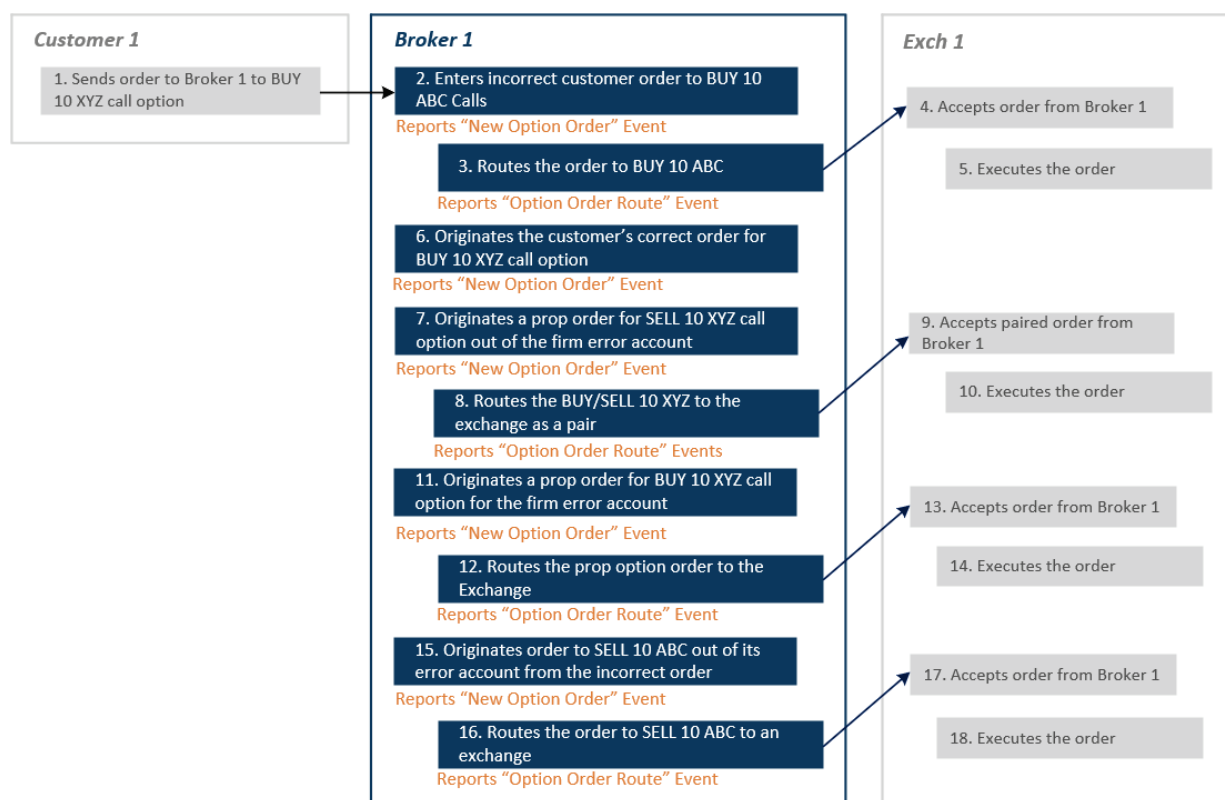

The following scenarios are representative only and do not represent all potential option error account scenarios.

4.2.1. Industry Member Purchases the Wrong Option for a Customer in Error

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order and purchases the wrong option in error. In this scenario, the customer places an order to buy 10 contracts of XYZ 191220C00095000 over the phone, and in error, the Industry Member enters an order to buy 10 contracts of ABC 191220C00095000.

Once the Industry Member realizes the error, it moves 10 contracts of ABC 191220C00095000 from the customer's account to its error account, and creates the correct customer order to buy 10 contracts of XYZ 191220C00095000. The Industry Member then originates a proprietary order in its error account to fill the order at the price the option was trading when the customer originally placed the order, and routes the orders as a pair to the exchange for execution.

The Industry Member then purchases 10 contracts of XYZ 191220C00095000 on the exchange for its error account to cover the contracts sold to the customer, and sells the 10 contracts of ABC 191220C00095000 purchased in error on the exchange from its error account.

When the firm places an order in error for option ABC 191220C00095000, Industry Member Broker 1 is required to report:

- The entry of the customer order to buy the wrong option (New Option Order event)
- The route of the order to buy the wrong option to an exchange (Option Order Route event)

When the firm realizes and corrects the error, Industry Member Broker 1 is required to report:

- The entry of the customer order to buy the correct option XYZ 191220C00095000 (New Option Order event)
- The origination of a proprietary order in its error account to sell XYZ 191220C00095000 to the customer at the price the option was trading when the customer order was originally placed (New Option Order event)
- The origination of an order to buy XYZ 191220C00095000 to cover the firm's error account (New Option Order event)
- The route of the buy order for XYZ 191220C00095000 to an exchange (Option Order Route event)

- The origination of an order to sell the contracts of ABC 191220C00095000 purchased in error (New Option Order event)
- The route of the sell order for ABC 191220C00095000 to an exchange (Option Order Route event)

The movement of the contracts from the customer account to the error account is not reportable to CAT, as internal security movements and journal entries are not reportable to CAT.

4.2.2. Price Adjustment of a Customer Order

This scenario illustrates the CAT reporting requirements when an Industry Member makes a price adjustment to a customer order routing a new order to the exchange. In this scenario, Industry Member Broker 1 receives a customer order to buy 10 contracts of XYZ 191220C00095000, and routes the order to the exchange for execution at a price of 10.00 per contract.

Industry Member Broker 1 determines that the customer should have received a price of 9.98 per contract, and moves the 10 contracts executed at a price of 10.00 from the customer account to its error account. To effect the price adjustment to the customer, Industry Member Broker 1 creates a new customer order to buy 10 contracts of XYZ 191220C00095000 at 9.98, and originates new proprietary order to sell 10 contracts to the customer out of its error account at 9.98. The orders are routed to the exchange as a pair for execution.

When the customer order is filled at the wrong price, Industry Member Broker 1 is required to report:

- The receipt of the original customer order (New Option Order event)
- The route of the original customer order to the exchange (Option Order Route event)

When the firm realizes the error and corrects the price, Industry Member Broker 1 is required to report:

- The origination of a new customer order at the correct price (New Option Order event)
- The origination of a proprietary order in its error account to sell the contracts to the customer at the correct price (New Option Order event)

The movement of the contracts from the customer account to the error account is not reportable to CAT, as internal security movements and journal entries are not reportable to CAT.

4.2.3. Industry Member Enters the Incorrect Side on a Customer Order in Error

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order and enters the incorrect side in error. In this scenario, the customer places an order to sell 10 contracts of XYZ 191220C00095000 over the phone, and in error, the Industry Member enters an order to buy 10 contracts of XYZ 191220C00095000. The order is routed to an exchange for execution.

Once the Industry Member realizes the error, it moves the 10 contracts purchased in error from the customer's account to its error account and creates the correct customer order to sell 10 contracts of XYZ 191220C00095000. The Industry Member then originates a proprietary order in its error account to fill the sell order at the price the option was trading when the customer originally placed the order, and routes the orders as a pair to the exchange for execution.

The Industry Member then sells 20 contracts out of its error account on an exchange to cover the contracts acquired from the customer.

When the firm places an order in error to buy XYZ 191220C00095000, Industry Member Broker 1 is required to report:

- The entry of the customer order to buy the contracts in error (New Option Order event)
- The route of the buy order to an exchange (Option Order Route event)

When the firm realizes and corrects the error, Industry Member Broker 1 is required to report:

- The entry of the correct customer order to sell the contracts (New Option Order event)
- The origination of a proprietary order in its error account to buy the contracts from the customer at the price the option was trading when the customer order was originally placed (New Option Order event)
- The origination of an order to sell the contracts acquired from the customer (New Option Order event)
- The route of the sell order to an exchange (Option Order Route event)

The movement of the contracts from the customer account to the error account is not reportable to CAT, as internal security movements and journal entries are not reportable to CAT.

4.2.4. Industry Member Does Not Enter a Customer Order Until T+1

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order and does not enter the customer order until T+1. In this scenario, the customer places an order to buy 10 contracts of XYZ 191220C00095000 over the phone, and in error, the Industry Member enters the order on T+1. The order is routed to an exchange for execution.

Once the Industry Member realizes that the customer is due a price adjustment, the Industry Member originates a proprietary order in its error account to fill the buy order at the price the option was trading when the customer originally placed the order, and routes the orders as a pair to the exchange for execution.

When entering the original customer order, Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Option Order event)
- The route of the customer order to the exchange (Order Route event)

When the firm corrects the price, Industry Member Broker 1 is required to report:

- The origination of a new customer order at the correct price (New Option Order event)
- The origination of a proprietary order in its error account to sell the contracts to the customer at the correct price (New Option Order event)

The movement of the contracts from the customer account to the error account is not reportable to CAT, as internal security movements and journal entries are not reportable to CAT.

5. FDID Scenarios

This section illustrates reporting requirements when populating the *firmDesignatedID* field (“FDID”). These scenarios are applicable to equivalent equities and options order flows. Refer to Section 2.4.2 of the [CAT Reporting Technical Specifications for Industry Members](#), along with [Published FDID guidance](#) and [Section M of the CAT FAQs regarding FDIDs](#) for additional information.

5.1.1. An Order is Received from a New Customer and an Account Number is not Finalized Until a Later Date

This scenario illustrates the CAT reporting requirements when an Industry Member receives an order from a new customer for which an account number is not yet established, and does not become finalized until a later date.

In this scenario, the Industry Member must report the receipt of the customer order on T, and the FDID must be populated with a value of “PENDING”, indicating that an account number for this customer is not yet established. Once the account number is established on T+1, the Industry Member must report a New Order Supplement event with the FDID of the newly established account.

Industry Member Broker 1 is required to report:

- The receipt of the customer order, indicating that an account number is not yet established (New Order event)
- The route of the customer/ order to the exchange (Order Route event)
- The FDID of the customer account after the account number has been finalized (New Order Supplement event)

In this scenario, the customer is an individual retail customer, which is reflected with an *accountHolderType* value of “I”. However, the reporting requirements in this scenario are not limited to retail customers.

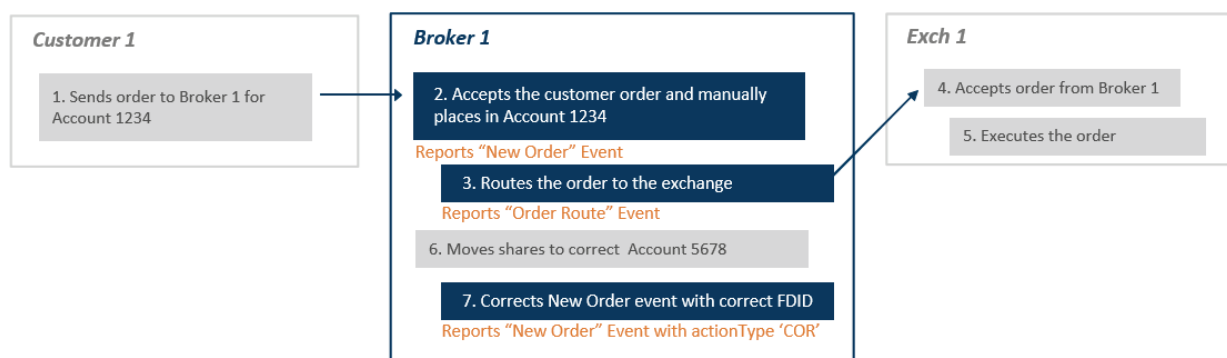

If an Industry Member is unable to submit a New Order Supplement event once the FDID becomes available, the Industry Member may report this activity by submitting a “COR” event reflecting the update in FDID. However, CAT will be unable to distinguish that the COR record is an update of a “PENDING” FDID value, and will categorize the event as a firm initiated error correction.

| 4 | The Exchange accepts the order from Broker 1 | EXCH1 reports a Participant Order Accepted event | |
| 5 | The Exchange executes the order | EXCH1 reports a Participant Order Trade event | |
| 6 | On T+1, Broker 1 finalizes the account number and reports the FDID to CAT | Broker 1 reports a New Order Supplement event type: MENOS orderKeyDate: 20180417T000000 orderID: O11111 symbol: XYZ eventTimestamp: 20180417T153035.234456 aggregatedOrders: firmDesignatedID: CUST1234 | Once an account number is established on T+1, Broker 1 reports the FDID to CAT in a New Order Supplement event. When reporting a New Order Supplement event to establish an FDID for an account, the <i>aggregatedOrders</i> field must not be populated. The <i>orderKeyDate</i> is the date and time that the Order Key for the related New Order event was generated, which is T. The <i>eventTimestamp</i> in the New Order Supplement event must match the <i>eventTimestamp</i> value reported on the New Order event. |

5.1.2. Order is Entered in the Wrong Account

This scenario illustrates the CAT reporting requirements when an Industry Member places an order for a customer in the wrong account. In this scenario, the Industry Member receives a customer order and manually places the order for the incorrect customer account. The firm routes the order to an exchange for execution. The Industry Member reports the order to CAT with the FDID of the incorrect account. After the order is reported to CAT, the Industry Member realizes the error, and moves the shares to the correct account.

Industry Member Broker 1 is required to report:

- The receipt of the customer order with the FDID of the incorrect account (New Order event)
- The route of the customer order to the exchange (Order Route event)
- The correction of the FDID reported to CAT (New Order event with *actionType* 'COR')

Since the relevant events had already been reported to CAT, the Industry Member must correct the FDID by reporting a firm-initiated correction of the New Order event using an *actionType* of 'COR'. If the Industry Member had realized and corrected the error prior to submission, the Industry Member would be required to report the correct FDID in its New Order event.

5.1.3. Customer Requests a Change in FDID Prior to Allocation

This scenario illustrates the CAT reporting requirements when a customer requests a change in the account prior to allocation. In this scenario, the Industry Member receives a customer order with instructions to place the order in a specific account. The firm routes the order to an exchange for execution. The Industry Member reports the order to CAT with the FDID of the account instructed by the customer. After the order is reported to CAT, the customer realizes the incorrect account information was given, and the Industry Member moves the shares to the correct account as an accommodation to the customer.

Industry Member Broker 1 is required to report:

- The receipt of the customer order with the FDID of the account originally instructed by the customer (New Order event)
- The route of the customer order to the exchange (Order Route event)
- The correction of the FDID reported to CAT (New Order event with *actionType* 'COR' and *handlingInstructions* value 'CAC')

Since the relevant events had already been reported to CAT, the Industry Member must correct the FDID by reporting a firm-initiated correction of the New Order event using an *actionType* of 'COR'. The correction must contain a *handlingInstructions* value of 'CAC' to indicate that the account correction was initiated by the customer, and was not a firm error. If the Industry Member had processed the customer initiated account correction prior to submission, the Industry Member would be required to report the correct FDID in its New Order event.

6. Allocation Scenarios

This section illustrates reporting requirements when reporting Post-Trade Allocation events. These scenarios are applicable to equivalent equities and options order flows.³ Allocation events must be reported to CAT for all allocations to a customer account, including DVP/RVP account allocations. Allocations to accounts other than a customer account (e.g. proprietary accounts, step outs, correspondent flips) may optionally be reported to CAT, but must be appropriately marked in the *allocationType* field. Refer to Section 3.3 of the [CAT Reporting Technical Specifications for Industry Members](#), along with [Published Allocation Reporting guidance](#) for additional information.

6.1. Allocation Scenarios

6.1.1. Order is Booked Directly in a Customer Account at a Self-Clearing Broker-Dealer

This scenario illustrates the CAT reporting requirements when an order is received or originated directly into a customer's account at a self-clearing broker-dealer. The order could be received directly from the customer either online or as a result of a call to the broker-dealer; or a registered representative of the firm with discretion over the customer's account could originate an order for the customer using his/her discretion. Upon receipt/origination of the order, the broker-dealer routes the order to an exchange for execution. Upon execution, the self-clearing broker-dealer places the shares in the customer's account.

Industry Member Broker 1 is required to report:

- The receipt/origination of the customer order (New Order event)
- Route of the customer order to an exchange (Order Route event)
- The booking of executed shares into the customer's account (Post-Trade Allocation event)

³ There are differences in the allowable values and the fields present on the equities allocations events (MEPA and MEAA) and those present on the options allocation events (MOPA and MOAA). The *optionID* and *occClearingMemberID* fields are only present on the options allocation events, while the *DVPCustodianID* and *symbol* fields are only present on the equity allocation events. Refer to [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

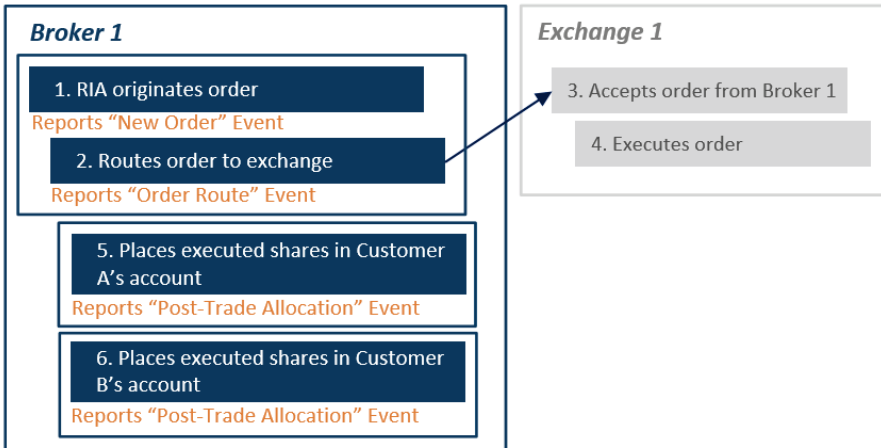

Since Broker 1 is self-clearing, Broker 1 has the obligation to report the MEPA event to CAT.

| 6 | The booking of shares by Broker 1 into the customer account | <i>Broker 1 reports a Post-Trade Allocation event</i> type: MEPA allocationKeyDate: 20180419T000000 allocationID: A12345 symbol: XYZ eventTimestamp: 20180419T080000 quantity: 500 price: 10.00 side: B firmDesignatedID: CUS001 institutionFlag: false tradeDate: 20180417 settlementDate: 20180419 allocationType: CUS DVPCustodianID: correspondentCRD: newOrderFDID: CUS001 allocationInstructionTime: TIDType: EIN | Since Broker 1 is self-clearing and the FDID of the related New Order is available in its booking system, this field must be populated. In this scenario, the FDID in the New Order event is the same as the FDID in the Post-Trade Allocation event. If the FDID of the related New Order was not available in the booking system, this field would be left blank. While the <i>TIDType</i> field is optional in Phase 2d, this field may be required no earlier than July 11, 2022. |

6.1.2. Order Originated by Registered Rep with Discretion Over Multiple Customer Accounts at a Self-Clearing Broker-Dealer

This scenario illustrates the CAT reporting requirements when a registered representative of a self-clearing broker-dealer exercises discretion over multiple retail customer accounts and originates a single aggregated order that will be allocated to the specific customer accounts post trade. The order is routed to an exchange for execution. Shares are booked to a firm average price account until the sub-account allocations are made to the individual customer accounts.

Industry Member Broker 1 is required to report:

- The origination of the aggregated order by the registered rep (New Order event)
- Route of the aggregated order to an exchange (Order Route event)
- The booking of executed shares into each customer account (Post-Trade Allocation events)

Since Broker 1 is self-clearing, Broker 1 has the obligation to report MEPAs to CAT for each allocation to a customer account. The booking of shares related to the aggregated order into the firm average price account is not required to be reported since it is a firm owned or controlled account, but could be voluntarily reported.

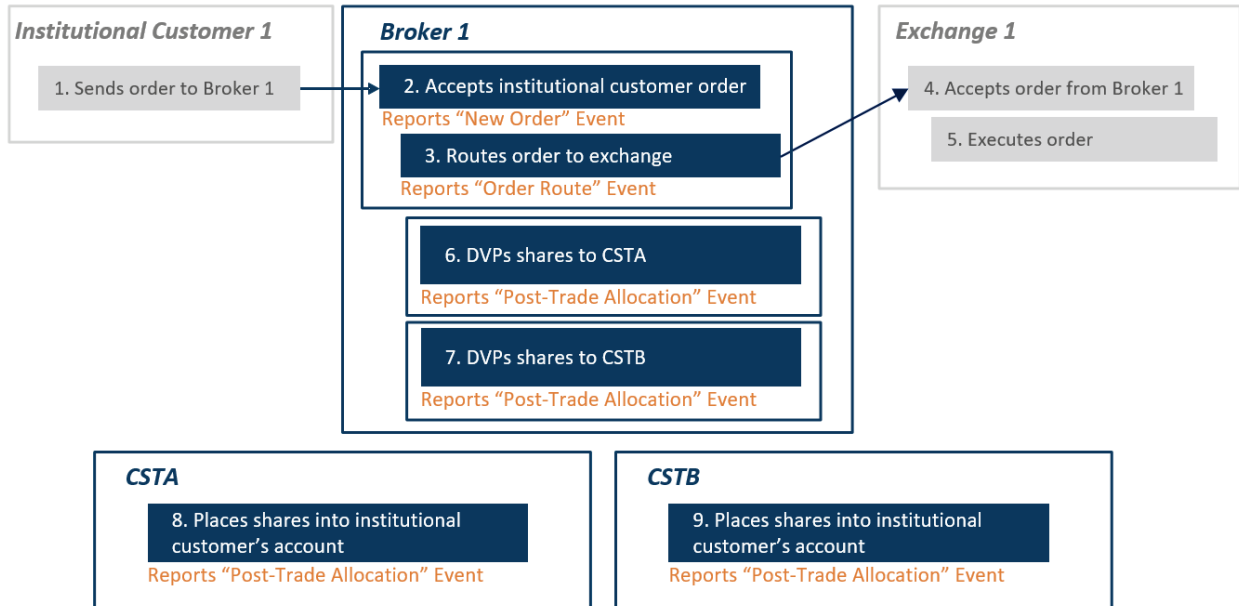

| # | Step | Reported Event | Comments |
|---|---|--|---|
| 1 | Registered representative of Broker 1 originates an order | <p><i>Broker 1 reports a New Order event</i></p> <p>type: MENO orderKeyDate: 20180417T000000 orderID: O12345 symbol: XYZ eventTimestamp: 20180417T153035.234456 deptType: A side: B price: 10.00 quantity: 1000 orderType: LMT timeInForce: DAY=20180417 tradingSession: REG custDspIntrFlag: false firmDesignatedID: AVG123 accountHolderType: V affiliateFlag: false negotiatedTradeFlag: false</p> | The FDID must represent the account in which the order was originated by the registered rep. In this scenario, the registered rep originated the order in a firm average price account, therefore the FDID on the New Order event must be the FDID of the firm average price account. |

6.1.3. DVP Allocations by a Self-Clearing Broker-Dealer to Institutional Customer Accounts Held at a Different Firm

This scenario illustrates the CAT reporting requirements when an institution places an order with a self-clearing executing firm Broker 1. The institution gives instructions to DVP the shares to two different custodial broker-dealers (CSTA and CSTB). The institution provides allocation instructions directly to CSTA and CSTB for allocation to the final customer accounts at the custodian broker-dealers.

Industry Member Broker 1 is required to report:

- The receipt of the institutional customer order (New Order event)
- Route of the order to an exchange (Order Route event)
- The DVP of shares to CSTA and CSTB (Post-Trade Allocation events)

CSTA and CSTB are required to report:

- The booking of shares into the institutional customer's account (Post-Trade Allocation events)

6.1.5. DVP Allocations by a Clearing Firm of a Non-Clearing Executing Broker

This scenario illustrates the CAT reporting requirements when a non-BD Investment Adviser (e.g., hedge fund, asset manager) is trading for both its pooled fund and a managed account and originates a single aggregated order that is routed to Industry Member non-clearing executing Broker 1. Upon execution by Broker 1, the Clearing Firm of Broker 1 (Clearing Firm) DVPs the shares to two different custodians based on the Investment Adviser's instructions, the Prime Broker for the Investment Adviser's pooled fund (PBA), and the non-broker custodian bank for the managed account (CSTB).

Industry Member Broker 1 is required to report:

- The receipt of the order from the Investment Adviser (New Order event)
- The execution of the order against its proprietary account (Trade event)

Clearing Firm is required to report:

- The DVP of shares to PBA and CSTB (Post-Trade Allocation events)

PBA is required to report:

- The booking of shares into the Investment Adviser's pooled fund (Post-Trade Allocation event)

CSTB is not required to report a Post-Trade Allocation event, as CSTB is not a broker-dealer. The requirements for this scenario would be the same if the Investment Adviser were a non-BD Investment Company

6.2. Allocation Amendment Scenarios

6.2.1. Allocation is Amended After Initial Booking

This scenario illustrates the CAT reporting requirements when an Industry Member amends an allocation after it is initially booked to the customer's account. In this scenario, an Industry Member allocates 500

shares to a customer. On the same day after the initial booking of shares to the customer account, the Industry Member determines that the customer should have been allocated 800 shares. The reporting of this scenario depends on whether the Industry Member's books and records reflect that the allocation to the customer was amended, or that the original allocation to the customer was cancelled and a new allocation was created.

Option 1:

In Option 1, the Industry Member initially allocates 500 shares to the customer. After the initial booking of shares to the customer account, the Industry Member determines that the customer should have been allocated 800 shares and amends the quantity of the existing customer allocation.

Industry Member Broker 1 is required to report:

- The booking of 500 shares into the customer's account (Post-Trade Allocation event)
- An amendment of the allocation to 800 shares (Amended Allocation event)

Option 2:

In Option 2, the Industry Member initially allocates 500 shares to the customer. After the initial booking of shares to the customer account, the Industry Member determines that the customer should have been allocated 800 shares. The Industry Member cancels the original allocation of 500 shares and books a new allocation for 800 shares to the customer's account.

Industry Member Broker 1 is required to report:

- The booking of the 500 share allocation to the customer's account (Post-Trade Allocation event)
- The cancellation of the original allocation (COR for the original Post-Trade Allocation event with the *cancelFlag* as 'true')

- The booking of a new 800 share allocation to the customer's account (Post-Trade Allocation event)

The requirements outlined in this scenario also apply if there is a change in FDID after the initial allocation occurs. Refer to Scenario 5.1.3 for reporting requirements when a customer requests a change to FDID prior to the initial allocation.

6.2.2. Allocation is Amended After Initial Booking Then Cancelled

This scenario illustrates the CAT reporting requirements when an Industry Member amends an allocation after it is initially booked to the customer's account, then later cancels the allocation. In this scenario, an Industry Member allocates 500 shares to a customer. After the initial booking of shares to the customer account, the Industry Member determines that the customer should have been allocated 800 shares. Later, the Industry Member makes the determination to cancel the allocation.

The reporting of this scenario depends on the Industry Member's allocation process and how the amendments are reflected in the firm's books and records. The cancellation of an allocation can be reported to CAT using the *cancelFlag* and *cancelTimestamp* in the Post-Trade Allocation event or the Amended Allocation event, as illustrated in Options 1 and 2 below. The *cancelTimestamp* must reflect the time that the allocation was cancelled. Refer to Section 4.14 of the [CAT Reporting Technical Specifications for Industry Members](#) for additional information.

The same guidance outlined in this scenario would apply if the allocation was not amended before it was cancelled.

Option 1:

The cancellation of the allocation is reported to CAT using the *cancelFlag* and *cancelTimestamp* in the Post-Trade Allocation event. In this example, since the Industry Member was unable to capture the *cancelFlag* and *cancelTimestamp* in its original submission, this information must be captured as a correction to the Post-Trade Allocation event.

Industry Member Broker 1 is required to report:

- The booking of 500 shares into the customer's account (Post-Trade Allocation event)
- An amendment of the allocation to 800 shares (Amended Allocation event)
- The cancellation of the allocation (COR for the original Post-Trade Allocation event with the *cancelFlag* as 'true')

In accordance with [FAQ U14](#), the Industry member is required to report changes to CAT reportable attributes of an allocation after the original booking of shares/contracts to CAT regardless if they occur

pre-settlement or post-settlement. The *cancelTimestamp* must reflect the time that the allocation was cancelled after it was previously amended. If the cancellation occurs after T+3 at 8AM, which is the deadline for timely corrections, Broker 1's COR will not be marked late if the *cancelTimestamp* is populated on the record.

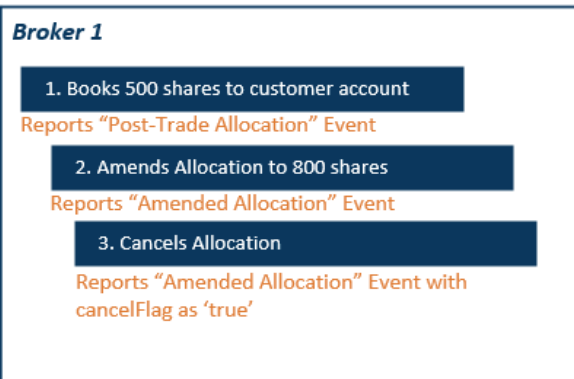

| # | Step | Reported Event | Comments |

| | | side: B firmDesignatedID: CUS001 institutionFlag: false tradeDate: 20180417 settlementDate: 20180419 allocationType: CUS DVPCustodianID: correspondentCRD: newOrderFDID: CUS001 allocationInstructionTime: cancelFlag: cancelTimestamp: TIDType: SSN | |
| 3 | Broker 1 cancels the allocation | <i>Broker 1 reports a COR for its original Post-Trade Allocation event with the <i>cancelFlag</i> as 'true'</i> actionType: COR type: MEPA allocationKeyDate: 20180419T000000 allocationID: A12345 symbol: XYZ eventTimestamp: 20180419T200000 cancelFlag: true cancelTimestamp: 20180421T110000 quantity: 500 price: 10.00 side: B firmDesignatedID: CUS001 institutionFlag: false tradeDate: 20180417 settlementDate: 20180419 allocationType: CUS DVPCustodianID: correspondentCRD: newOrderFDID: CUS001 allocationInstructionTime: TIDType: SSN | <p>The <i>eventTimestamp</i> in Broker 1's COR event must reflect the same timestamp as the original allocation.</p> <p>The <i>cancelTimestamp</i> must reflect the time that the allocation was cancelled after it was previously amended. If the cancellation occurs after T+3 at 8AM, which is the deadline for timely corrections, Broker 1's COR will not be marked late if the <i>cancelTimestamp</i> is populated on the record.</p> <p>While the <i>TIDType</i> field is optional in Phase 2d, this field may be required no earlier than July 11, 2022.</p> |

Option 2:

The Industry Member reports the cancellation of the allocation to CAT using the *cancelFlag* and *cancelTimestamp* in the Amended Allocation event.

Reporting Option 2A ('NEW' Amended Allocation event with the *cancelFlag* as 'true')

Industry Member Broker 1 is required to report:

- The booking of 500 shares into the customer's account (Post-Trade Allocation event)
- An amendment of the allocation to 800 shares (Amended Allocation event)
- The cancellation of the allocation (Amended Allocation event with the *cancelFlag* as 'true')

When reporting the cancellation of the allocation to CAT as described in Option 2A, the *eventTimestamp* must reflect the date/time that the allocation amendment was booked into the customer's/client's account, which is the same time that the allocation was cancelled as reflected in the *cancelTimestamp* field.

Reporting Option 2B ('COR' of Amended Allocation event with the *cancelFlag* as 'true')

Industry Member Broker 1 is required to report:

- The booking of 500 shares into the customer's account (Post-Trade Allocation event)
- An amendment of the allocation to 800 shares (Amended Allocation event)
- The cancellation of the allocation ('COR' for the last Amended Allocation event with the *cancelFlag* as 'true')

In this example, since the Industry Member was unable to capture the *cancelFlag* and *cancelTimestamp* in its original submission, this information may be captured as a correction to the Amended Allocation event.

When reporting the cancellation of the allocation to CAT as described in Option 2B, the *eventTimestamp* must reflect the date/time of the original Amended Allocation event submission, and the *cancelTimestamp* must reflect the time that the allocation was cancelled after it was previously amended. If the cancellation occurs after T+3 at 8AM, which is the deadline for timely corrections, Broker 1's 'COR' event will not be marked late if the *cancelTimestamp* is populated on the record.

6.2.3. Allocation is Amended then Reverted to the Original Terms and Conditions

This scenario illustrates the CAT reporting requirements when an Industry Member amends an allocation after it is initially booked to the customer's account, then later reverts the changes on the terms of the original booking. In this scenario, an Industry Member allocates 500 shares to a customer. After the initial booking of shares to the customer account, the Industry Member determines that the customer should have been allocated 800 shares. Later, the Industry Member later makes the determination that the allocation should not have been updated to 800 shares, and reverts to the original 500 share booking.

Industry Member Broker 1 is required to report:

- The booking of 500 shares into the customer's account (Post-Trade Allocation event)
- An amendment of the allocation to 800 shares (Amended Allocation event)
- An amendment of the allocation to 500 shares (Amended Allocation event)

Although the Industry Member reverted the changes that were made to the original booking, this must be captured as an Amended Allocation event reflecting the final details of the booking.

7. Error Correction Scenarios

This section illustrates reporting requirements when correcting an error in CAT. These scenarios are applicable to equivalent equities and options order flows. Refer to Section 7 of the [CAT Reporting Technical Specifications for Industry Members](#) and [Section P of the CAT FAQs regarding Feedback and Error Corrections](#) for additional information.

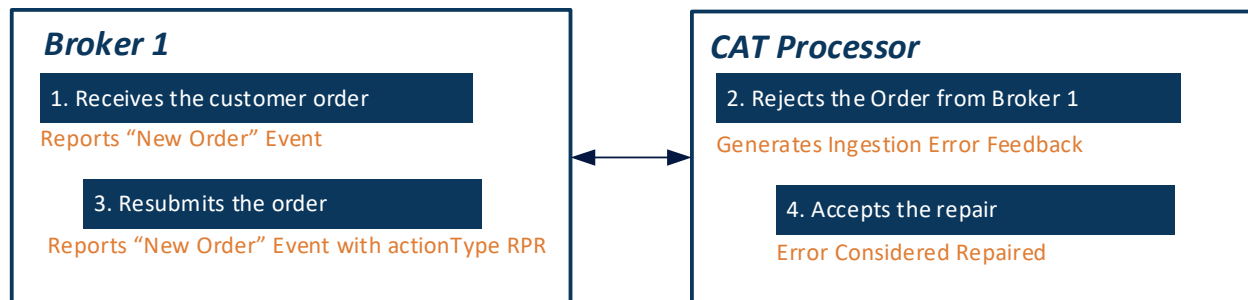

7.1. Correcting Ingestion Errors

7.1.1. Correcting an Error using Action Type of 'RPR'

This scenario illustrates the error feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that repairs an error using the Action Type of 'RPR'.

For this scenario, the following steps occur:

- Industry Member submits a New Order event that is subsequently rejected.
- The CAT Processor provides the error feedback to the Industry Member.
- The Industry Member corrects the error and resubmits to CAT.

Note that in the example below, only a subset of fields relevant to corrections have been included.

| # | Step | Reported Event | Comments |

| 3 | The Industry Member repairs the record using the Action Type of 'COR' and resubmits. | Broker 1 resubmits the <i>New Order</i> event actionType: COR errorROEID: firmROEID: 20180501_M12360 type: MENO CATReporterIMID: BRK1 orderKeyDate: 20180501T153035.234456 | |

| # | Step | Reported Event | Comments |
|---|-----------------------------------|---|--|
| | | orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 accountHolderType: P | |
| 4 | CAT Processor accepts the repair. | | The original error will be considered as repaired. The repaired event will be processed by CAT. |

7.1.3. Firm Initiated Correction using Action Type of 'COR'

This scenario illustrates the firm initiated correction reporting requirements to CAT for an Industry Member that corrects an error using the Action Type of 'COR'.

For this scenario, the following steps occur:

- Industry Member submits a New Order event that is accepted.
- The Industry Member subsequently submits a correction to the *accountHolderType* field reported to CAT.

Note that in the example below, only a subset of fields relevant for corrections have been included.

| # | Step | Reported Event | Comments |
|---|----------------------------|--|----------|
| 1 | Broker 1 submits an order. | <i>Broker 1 reports a New Order event</i> actionType: NEW firmROEID: 20180501_M12360 type: MENO CATReporterIMID: BRK1 orderKeyDate: 20180501T153035.234456 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 | |

| # | Step | Reported Event | Comments |
|---|--|---|---|
| | | accountHolderType: P | |
| 2 | Broker 1 order is accepted. | | |
| 3 | The Industry Member submits a correction using the Action Type of 'COR'. | <i>Broker 1 resubmits the New Order event</i> actionType: COR errorROEID: firmROEID: 20180501_M12360 type: MENO CATReporterIMID: BRK1 orderKeyDate: 20180501T153035.234456 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 accountHolderType: A | |
| 4 | CAT Processor accepts the correction. | | The corrected event will be processed by CAT. |

7.1.4. File Deletion

This scenario illustrates the reporting requirements to CAT for an Industry Member that submits a delete file instruction. After the firm has received the File Acknowledgement feedback, the file deletion instruction may only be used for files with data representing an event date that is prior to 8 am on T+4. All events contained within the original file for which the file deletion instruction was received must have an Action Type of NEW.

For this scenario, the following steps occur:

- Industry Member submits a New Order event that is subsequently rejected.
- The CAT Processor provides the error feedback to the Industry Member.
- The Industry Member submits a delete file instruction to CAT.

Note that in the example below, only a subset of fields relevant for corrections have been included.

| # | Step | Reported Event | Comments |
|---|--|--|--|
| 1 | Broker 1 submits an order | <i>Broker 1 reports a New Order event</i> actionType: NEW firmROEID: 20180501_M12360 type: MENO CATReporterIMID: BRK1 orderKeyDate: 20180501T153035.234456 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 accountHolderType: B fileName: SUBID_BRK1_20180501_OrderEvents_000123.json.bz2 | |
| 2 | Broker 1 receives feedback from the CAT Processor | <i>Broker 1 receives feedback on the New Order event</i> errorCode: 2001 actionType: RPR errorROEID: 123456789 firmROEID: 20180501_M12360 type: MENO CATReporterIMID: BRK1 orderKeyDate: 20180501T153035.234456 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 accountHolderType: B | Rejected with Error Code 2001 - Missing or Invalid <i>accountHolderType</i> |
| 3 | The Industry Member submits a delete file instruction | <i>Broker 1 submits an empty file with delete instruction on 20180503.</i> SUBID_BRK1_20180503_OrderEvents_000123.DEL.json.bz2 | |
| 4 | CAT Processor marks all records in the file as deleted | | All events included in the original file submission will be considered deleted. All associated errors will be considered as repaired. |

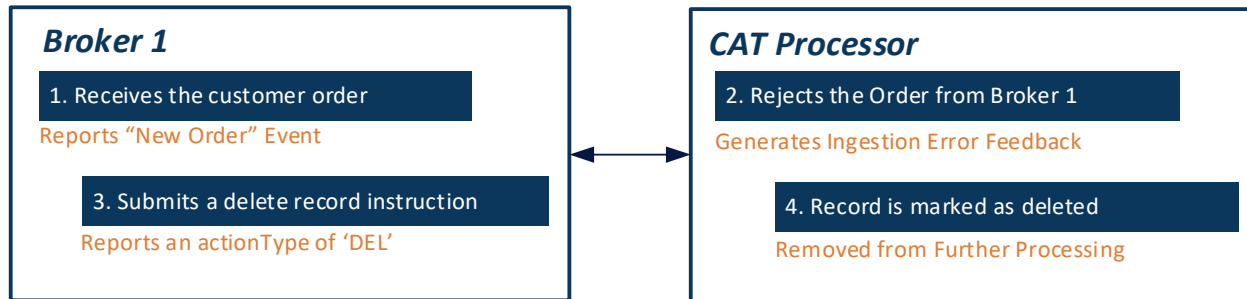

7.1.5. Deleting an Erroneous Record using Action Type of 'DEL'

This scenario illustrates the error feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that submits a record delete instruction.

For this scenario, the following steps occur:

- Industry Member submits a New Order event that is submitted and accepted.

- The CAT Processor provides the error feedback to the Industry Member.
- The Industry Member submits a delete record instruction to CAT.

Note that in the example below, only a subset of fields relevant for corrections have been included.

| # | Step | Reported Event | Comments |
|---|---|---|---|
| 1 | Broker 1 submits an order | <i>Broker 1 reports a New Order event</i> actionType: NEW firmROEID: 20180501_M12360 type: MENO CATReporterIMID: BRK1 orderKeyDate: 20180501T153035.234456 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 accountHolderType: B | |
| 2 | Broker 1 receives feedback from the CAT Processor | <i>Broker 1 receives feedback on the New Order event</i> errorCode: 2001 actionType: RPR errorROEID: 123456789 firmROEID: 20180501_M12360 type: MENO CATReporterIMID: BRK1 orderKeyDate: 20180501T153035.234456 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 accountHolderType: B | Rejected with Error Code 2001 - Missing or Invalid <i>accountHolderType</i> |
| 3 | The Industry Member submits a delete record instruction | <i>Broker 1 submits a delete record instruction.</i> actionType: DEL errorROEID: 123456789 firmROEID: | |

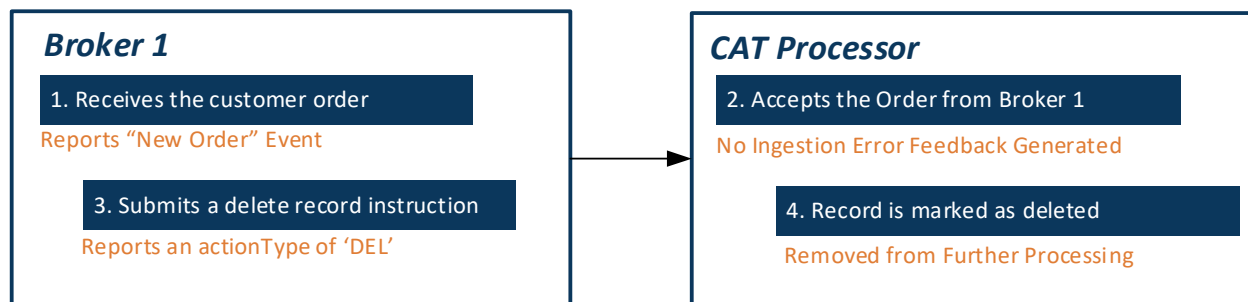

| # | Step | Reported Event | Comments |
|---|---|----------------|---|
| 4 | CAT Processor marks the record as deleted | | The original record will be considered as deleted. All associated errors will be considered as repaired. |

7.1.6. Deleting a record with no Error Feedback using Action Type of 'DEL'

This scenario illustrates the follow-up reporting requirements to CAT for an Industry Member that submits a record delete instruction without receiving Error Feedback.

For this scenario, the following steps occur:

- Industry Member submits a New Order event that is accepted.
- The Industry Member submits a delete record instruction to CAT.

Note that in the example below, only a subset of fields relevant for corrections have been included.

| # | Step | Reported Event | Comments |
|---|--|---|----------|
| 1 | Broker 1 submits an order | <i>Broker 1 reports a New Order event</i> actionType: NEW firmROEID: 20180501_M12360 type: MENO CATReporterIMID: BRK1 orderKeyDate: 20180501T153035.234456 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 accountHolderType: P | |
| 2 | Broker 1 order is accepted. | | |
| 3 | The Industry Member submits a delete record instruction. | <i>Broker 1 submits a delete record instruction.</i> actionType: DEL errorROEID: | |

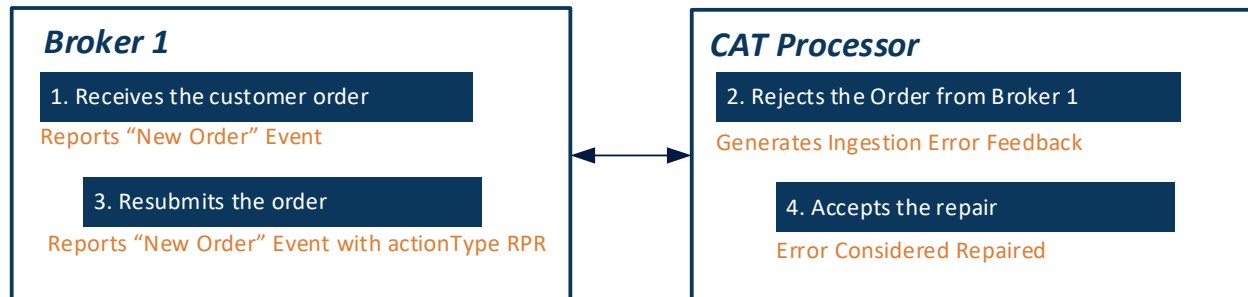

| # | Step | Reported Event | Comments |
|---|--|----------------------------|---|
| | | firmROEID: 20180501_M12360 | |
| 4 | CAT Processor marks the record as deleted. | | The original record will be considered as deleted. All associated errors will be considered as repaired. |

7.1.7. Correcting an Unreadable Event using Action Type of 'RPR'

This scenario illustrates the error feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that repairs an error using the Action Type of 'RPR' when the submitted record is unreadable by CAT.

For this scenario, the following steps occur:

- Industry Member submits a New Order that is subsequently rejected because it was malformed and could not be parsed.
- The CAT Processor provides the error feedback to the Industry Member including the Error Code.
- The Industry Member corrects the error and resubmits to CAT.

Note that in the example below, only a subset of fields relevant for corrections have been included.

| # | Step | Reported Event | Comments |
|---|--|---|---|
| 1 | Broker 1 submits an order | <i>Broker 1 reports an unreadable record.</i> | |
| 2 | Broker 1 receives feedback from the CAT Processor | <i>Broker 1 receives feedback</i> | Rejected with Error Code 2134 - Invalid JSON or CSV format The record cannot be parsed, hence the only fields that will be returned will be <i>errorCode</i> , <i>actionType</i> and <i>errorROEID</i> . |
| 3 | The Industry Member repairs the record using the Action Type of 'RPR' and resubmits. | <i>Broker 1 resubmits the event</i> actionType: RPR errorROEID: 123456789 firmROEID: 20180501_M12360 | |

| # | Step | Reported Event | Comments |
|---|-----------------------------------|---|--|
| | | type: MENO CATReporterIMID: BRK1 orderKeyDate: 20180501T153035.234456 orderID: O12345 symbol: XYZ eventTimestamp: 20180501T153035.234456 accountHolderType: P | |
| 4 | CAT Processor accepts the repair. | | The original error will be considered as repaired. The repaired event will be processed by CAT. |

7.2. Correcting Linkage Discovery Errors

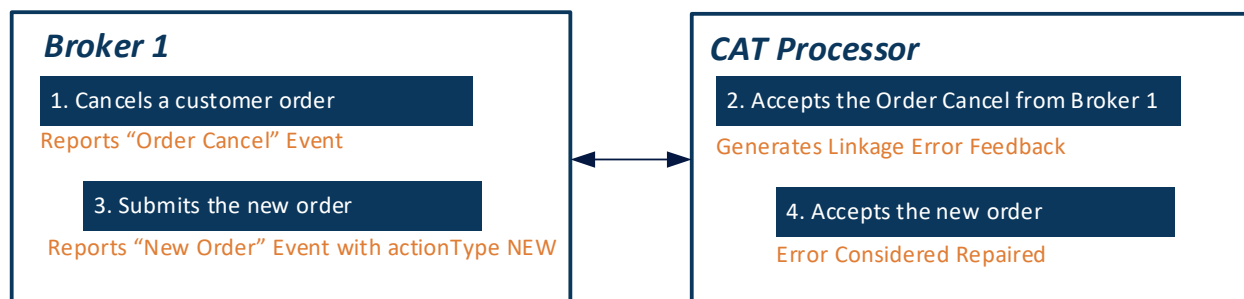

7.2.1. Correcting an Intrafirm Linkage Error using Action Type of 'NEW'

This scenario illustrates the error feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that repairs an intra-firm linkage error using the action type of 'NEW'. This scenario applies to error code 3501 when the originating event does not exist in CAT.

In such instances, the reporting of a 'RPR' or 'COR' is not applicable since the unlinked event must remain. The error is resolved by reporting the missing event.

For this scenario, Industry Member Broker 1 reported an Order Cancel event, without an associated origination event:

- Order Cancel event submitted by Broker 1 is unlinked due to Order Key not found.
- The CAT Processor provides the intra-firm linkage error feedback to the Industry Member.
- The Industry Member submits the missing event to the CAT Processor, which corrects the linkage error.

Note that in the example below, only a subset of fields relevant for corrections have been included.

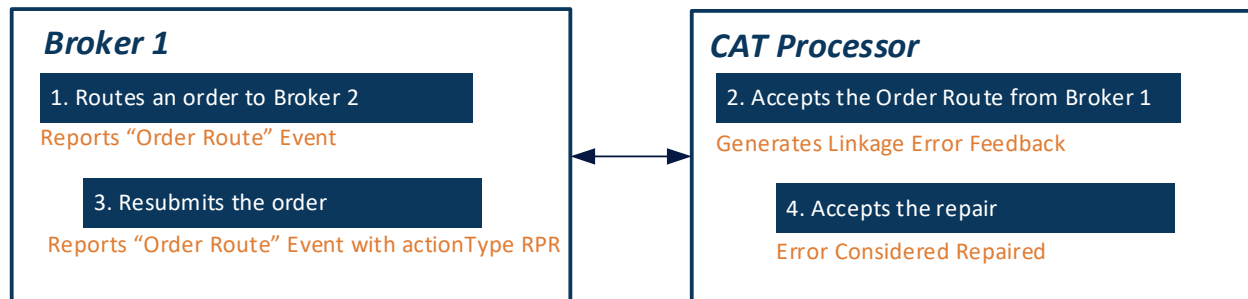

| # | Step | Reported Event | Comments |
|---|---|---|--|
| 1 | Broker 1 reports an order cancel event | <i>Broker 1 reports an Order Cancel event</i> actionType: NEW firmROEID: 20180417_Q12360 type: MEOC CATReporterIMID:BRK1 orderKeyDate: 20180417T000000 eventTimestamp: 20180417T143035.323556 symbol: XYZ orderID: Z23456 cancelQty: 1000 | |
| 2 | Broker 1 receives feedback from the CAT Processor. | <i>Broker 1 receives feedback on the Order Cancel event</i> errorCode: 3501 actionType: RPR errorROEID: 923451234 firmROEID: 20180417_Q12360 type: MEOC CATReporterIMID:BRK1 orderKeyDate: 20180417T000000 orderID: Z23456 symbol: XYZ cancelQty: 1000 | Linkage Error Code 3501 - Secondary Event – Order Key, Trade Key, Quote Key or Fulfillment Key not found |
| 3 | The Industry Member repairs the unlink record using the Action Type of 'NEW'. | <i>Broker 1 submits the New Order event</i> actionType: NEW firmROEID: 20180417_Q12378 type: MENO CATReporterIMID:BRK1 orderKeyDate: 20180417T000000 orderID: Z23456 symbol: XYZ quantity: 1000 | The late reported MENO event is NOT required to include the errorROEID or firmROEID of the associated linkage error. |
| 5 | CAT Processor accepts the unlink repair. | | During processing, CAT will make the linkage and the original linkage error will be considered repaired. |

7.2.2. Correcting an Interfirm Linkage Error using Action Type of 'RPR'

This scenario illustrates the error feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that repairs an interfirm linkage error using the Action Type of 'RPR'.

For this scenario, the following events occur:

- Order Route event submitted by Broker 1 is unlinked because a matching *routedOrderID* cannot be found
- The CAT Processor provides the unlinked error feedback to the Industry Member.
- The Industry Member corrects the error and resubmits to CAT.

Note that in the example below, only a subset of fields relevant for corrections have been included.

| # | Step | Reported Event | Comments |
|---|--|---|---|
| 1 | Broker 1 routes order to Broker 2. | <p><i>Broker 1 reports an Order Route event</i></p> <p> actionType: NEW firmROEID: 20180417_Z12360 type: MEOR orderKeyDate: 20180417T000000 eventTimestamp: 20180417T153035.234556 symbol: XYZ senderIMID: 123:FRMA destination: 456:FRMB orderID: O23456 routedOrderID: AO222 </p> | |
| 2 | Broker 1 receives feedback from the CAT Processor. | <p><i>Broker 1 receives feedback on the Order Route event</i></p> <p> errorCode: 8003 actionType: RPR errorROEID: 123451234 firmROEID: 20180417_Z12360 type: MEOR orderKeyDate: 20180417T000000 eventTimestamp: 20180417T153035.234556 symbol: XYZ senderIMID: 123:FRMA destination: 456:FRMB orderID: O23456 routedOrderID: AO222 </p> | <p>Linkage Error Code 8003 - Matching <i>routedOrderID</i> cannot be found.</p> |

| # | Step | Reported Event | Comments |
|---|---|--|---|
| 3 | Broker 1 receives feedback from the CAT Processor. | <i>Broker 1 receives feedback as Named on the Order Accepted event</i> errorCode: 9004 actionType: RPR firmROEID: 20180417_Z12322 eventTimestamp: 20180417T153035.234556 symbol: XYZ receiverIMID: 123:FRMB senderIMID: 456:FRMA routedOrderID: AO223 quantity: 100 | Linkage Error Code 9004: Named - Matching <i>routedOrderID</i> cannot be found. |
| 4 | The Industry Member repairs the unlink record using the Action Type of 'RPR' and resubmits. | <i>Broker 1 resubmits the Order Route event</i> actionType: RPR errorROEID: 123451234 firmROEID: 20180417_Z12360 type: MEOR orderKeyDate: 20180417T000000 eventTimestamp: 20180417T153035.234556 symbol: XYZ senderIMID: 123:FRMA destination: 456:FRMB orderID: O23456 routedOrderID: AO223 | The firm may also use actionType of 'COR' when re-submitting the Order Route event. |
| 5 | CAT Processor accepts the unlink repair. | | During processing, CAT will make the linkage and BOTH of the original linkage errors will be considered repaired. |

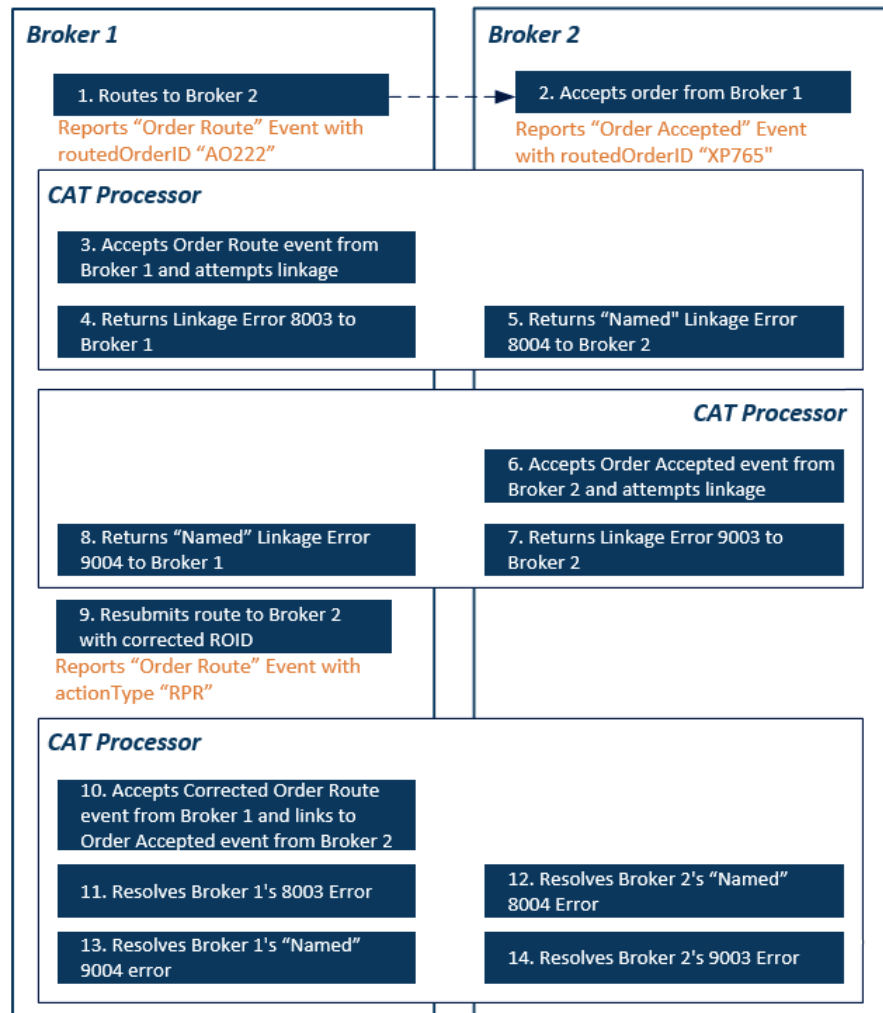

7.2.3. Correcting an Interfirm Linkage Error using Action Type of 'RPR'

This scenario illustrates the error feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that repairs an interfirm linkage error using the Action Type of 'RPR'.

For this scenario, the following events occur:

- Order Route event submitted by Broker 1 is unlinked to Order Accepted event submitted by Broker 2 because a matching *routedOrderID* cannot be found
- The CAT Processor returns unlinked error feedback to the reporting parties and unlinked "named" error feedback to the "named" parties
- Broker 1 corrects the error in the *routedOrderID* and resubmits to CAT

- The CAT Processor links the Order Route event resubmitted by Broker 1 to the Order Accepted event reported by Broker 2 and resolves the errors

Note that in the example below, only a subset of fields relevant for corrections have been included.

| # | Step | Reported Event | Comments |
|---|------------------------------------|--|----------|
| 1 | Broker 1 reports route to Broker 2 | <p><i>Broker 1 reports an Order Route event</i></p> <p> actionType: NEW firmROEID: 20180417_Z12360 type: MEOR orderKeyDate: 20180417T000000 orderID: O23456 symbol: XYZ eventTimestamp: 20180417T153035.234556 senderIMID: 123:FRMA destination: 456:FRMB </p> | |

| 6 | Broker 1 receives "named" feedback from the CAT Processor | <i>Broker 1 receives feedback as Named on the Order Accepted event</i> errorCode: 9004 errorType: ERRIM firmROEID: 20180417_Z12322 symbol: XYZ eventTimestamp: 20180417T153035.234556 receiverIMID: 456:FRMB senderIMID: 123:FRMA routedOrderID: XP756 | Linkage Error Code 9004- Named- Matching <i>routedOrderID</i> cannot be found. |
| 7 | Broker 1 repairs the unlinked Order Route event using the Action Type of 'RPR' and resubmits | <i>Broker 1 resubmits the Order Route event</i> actionType: RPR errorROEID: 123451234 firmROEID: 20180417_Z12360 type: MEOR orderKeyDate: 20180417T000000 orderID: O23456 symbol: XYZ eventTimestamp: 20180417T153035.234556 senderIMID: 123:FRMA destination: 456:FRMB routedOrderID: XP756 | The firm may also use <i>actionType</i> of 'COR' when re-submitting the Order Route event. |
| 8 | CAT Processor accepts the unlink repair and resolves linkage errors | | During processing, CAT will make the linkage and the 8003, 8004, 9003 and 9004 errors will be considered repaired. |

7.2.4. Correcting an Interfirm Linkage Error by Submitting the Missing Event

This scenario illustrates the error feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that repairs an interfirm linkage error by reporting the missing event.

For this scenario, the following events occur:

- Order Route event submitted by Broker 1 is unlinked, as no Order Accepted event was submitted by Broker 2
- The CAT Processor returns unlinked error feedback to Broker 1 and “named” feedback to Broker 2
- Broker 2 submits the related Order Accepted event to CAT
- The CAT Processor links the Order Route event submitted by Broker 1 to the Order Accepted event reported by Broker 2 and resolves the errors

Note that in the example below, only a subset of fields relevant for corrections have been included.

| # | Step | Reported Event | Comments |
|---|------------------------------------|---|----------|
| 1 | Broker 1 reports route to Broker 2 | <i>Broker 1 reports an Order Route event</i> actionType: NEW firmROEID: 20180417_Z12360 type: MEOR orderKeyDate: 20180417T000000 | |

| 4 | Broker 2 reports the Order Accepted event (late within the processing window) | <i>Broker 2 receives feedback on the Order Accepted event</i> actionType: NEW firmROEID: 20180417_X98735 type: MEOA orderKeyDate: 20180417T000000 orderID: O6789 symbol: XYZ eventTimestamp: 20180417T153035.234556 receiverIMID: 456:FRMB senderIMID: 123:FRMA routedOrderID: AO222 | |

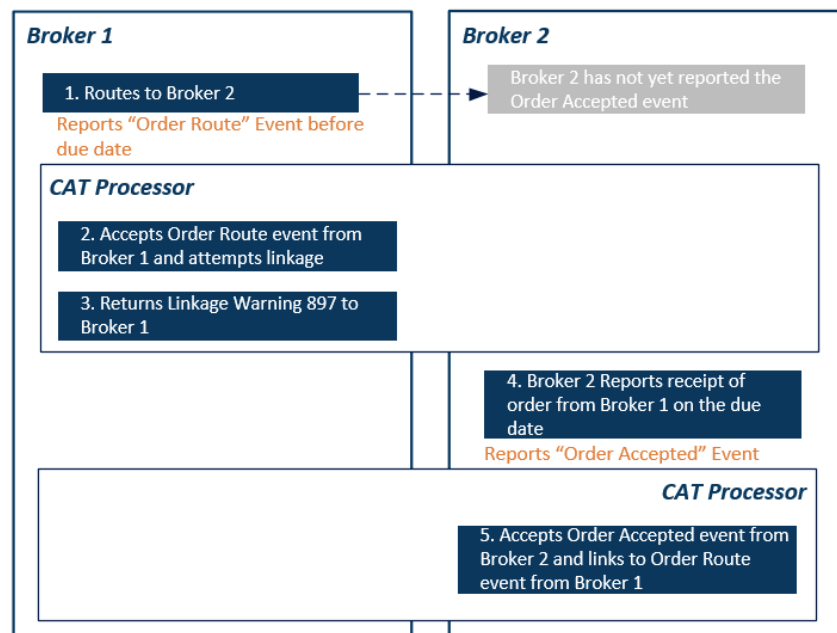

| # | Step | Reported Event | Comments |
|---|---|----------------|--|
| 5 | CAT Processor links the record from Broker 2 and repair and resolves linkage errors | | During processing, CAT will make the linkage and the 8003 and 8004 errors will be considered repaired. |

7.2.5. Interfirm Linkage Warning for a Record Reported Early to CAT

This scenario illustrates the feedback provided by the CAT Processor and the follow-up reporting requirements to CAT for an Industry Member that reports a record to CAT prior to the due date.

For this scenario, the following events occur:

- Order Route event submitted by Broker 1 is reported prior to the due date and is unlinked, as the Order Accepted event has not yet been submitted by Broker 2
- The CAT Processor returns a warning to Broker 1 that is not repairable
- Broker 2 submits the related Order Accepted event to CAT on the due date
- The CAT Processor links the Order Route event submitted by Broker 1 to the Order Accepted event reported by Broker 2

Note that in the example below, only a subset of fields relevant for corrections have been included.

| # | Step | Reported Event | Comments |
|---|------------------------|--|----------|
| 1 | Broker 1 reports route | Broker 1 reports an Order Route | |

| # | Step | Reported Event | Comments |
|---|--|---|---|
| | to Broker 2 before the due date | event actionType: NEW firmROEID: 20180417_Z12360 type: MEOR orderKeyDate: 20180417T000000 orderID: O23456 symbol: XYZ eventTimestamp: 20180417T153035.234556 senderIMID: 123:FRMA destination: 456:FRMB routedOrderID: AO222 | |
| 2 | Broker 1 receives unlinked warning from the CAT Processor | <i>Broker 1 receives feedback on the</i> Order Route event errorCode: 897 actionType: RPR errorROEID: 123451234 firmROEID: 20180417_Z12360 type: MEOR orderKeyDate: 20180417T000000 eventTimestamp: 20180417T153035.234556 symbol: XYZ senderIMID: 123:FRMA destination: 456:FRMB orderID: O23456 routedOrderID: AO222 | The CAT Processor is unable to identify a matching ROID for the Event Date. Linkage Error Code 897 - Early reported event |
| 3 | Broker 2 reports the Order Accepted event on the due date | <i>Broker 2 reports an</i> Order Accepted event actionType: NEW firmROEID: 20180417_X98735 type: MEOA orderKeyDate: 20180417T000000 orderID: O6789 symbol: XYZ eventTimestamp: 20180417T153035.234556 receiverIMID: 456:FRMB senderIMID: 123:FRMA routedOrderID: AO222 | |
| 4 | CAT Processor links the record from Broker 2 to the record from Broker 1 | | No further action is required by Broker 1, since the 897 Warning is not repairable |

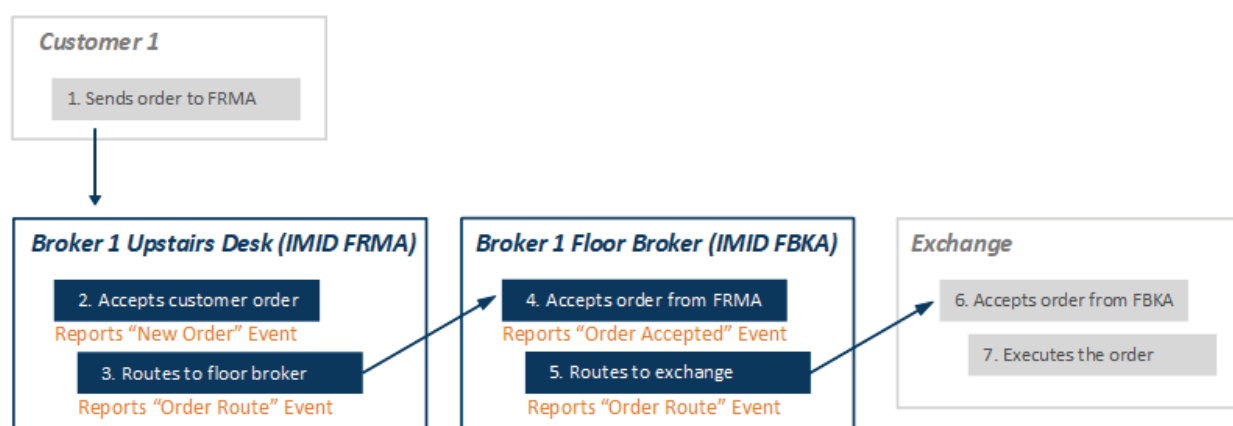

8. Floor Broker Scenarios

8.1. NYSE Floor Broker Scenarios

This section illustrates the CAT reporting requirements for NYSE Floor Brokers.

8.1.1. Order Routed to a Floor Broker Within the Same Broker-Dealer

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order, and further routes the customer order to a floor broker within the same broker-dealer that uses a separate IMID. While both parties belong to the same Industry Member, Broker 1 maintains a separate IMID for its upstairs desk and its floor broker. Upon receipt of the order, the floor broker further routes the order to the exchange for execution.

Industry Member Broker 1's upstairs desk (FRMA) is required to report:

- The receipt of the order from the customer (New Order event)
- The route of the order to its floor broker (Order Route event)

Industry Member Broker 1's floor broker (FBKA) is required to report:

- The receipt of the order from Broker 1's upstairs desk (Order Accepted event)
- The route of the order to the exchange (Order Route event)

Since Broker 1 maintains separate IMIDs for its floor broker and its upstairs desk, Broker 1 is required to report an MEOR reflecting a route to the floor broker, not an MEIR. Refer to [CAT FAQ L1](#) for additional information on equity floor broker reporting.

NYSE Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.1.2. Order Routed to a Floor Broker at Another Broker-Dealer

This scenario illustrates the CAT reporting requirements when an Industry Member receives a customer order, and further routes the customer order to a floor broker at another broker-dealer. Upon receipt of the order, the floor broker further routes the order to the exchange for execution.

Industry Member Broker 1's upstairs desk (FRMA) is required to report:

- The receipt of the order from the customer (New Order event)
- The route of the order to Broker 2's floor broker (Order Route event)

Industry Member Broker 2's floor broker (FBKB) is required to report:

- The receipt of the order from Broker 1's upstairs desk (Order Accepted event)
- The route of the order to the exchange (Order Route event)

Refer to [CAT FAQ L1](#) for additional information on equity floor broker reporting.

NYSE Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.1.3. Floor Broker Routes an Order to a Floor Broker at Another Broker-Dealer

This scenario illustrates the CAT reporting requirements when a floor broker routes an order to a floor broker at another Broker-Dealer. In this scenario, Industry Member Broker 1 receives a customer order, and further routes the customer order to a floor broker within the same broker-dealer that uses a separate IMID. Upon receipt of the order, the floor broker routes the order to Industry Member Broker 2's floor broker. Industry Member Broker 2's floor broker routes the order to the exchange for execution.

Industry Member Broker 1's upstairs desk (FRMA) is required to report:

- The receipt of the order from the customer (New Order event)
- The route of the order to its floor broker (Order Route event)

Industry Member Broker 1's floor broker (FBKA) is required to report:

- The receipt of the order from Broker 1's upstairs desk (Order Accepted event)
- The route of the order to Broker 2's floor broker (Order Route event)

Industry Member Broker 2's floor broker (FBKB) is required to report:

- The receipt of the order from Broker 1 (Order Accepted event)
- The route of the order to the exchange (Order Route event)

Refer to [CAT FAQ L1](#) for additional information on equity floor broker reporting.

NYSE Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.1.4. Floor Broker Routes an Order to an Exchange Operated Algorithm

This scenario illustrates the CAT reporting requirements when a floor broker receives an order and routes the order to an exchange operated algorithm. In this scenario, Industry Member Broker 1 receives a customer order, and further routes the customer order to a floor broker within the same broker-dealer that uses a separate IMID.

Upon receipt of the order, the floor broker further routes the order to an exchange operated algorithm. The algorithm routes the order to the exchange for execution. The exchange operated algorithm is considered to be a separate department or desk of Broker 1's floor broker for the purposes of reporting to CAT.

Industry Member Broker 1's upstairs desk (FRMA) is required to report:

- The receipt of the order from the customer (New Order event)
- The route of the order to its floor broker (Order Route event)

Industry Member Broker 1's floor broker (FBKA) is required to report:

- The receipt of the order from Broker 1's upstairs desk (Order Accepted event)
- The internal route of the order to the exchange operated algorithm (Order Internal Route Accepted event)
- The route of the order to the exchange (Order Route event)

The floor broker's route to the exchange operated algorithm is required to be reported as an MEIR event with a *handlingInstructions* value of "FBA". Refer to [CAT FAQ L1](#) for additional information on equity floor broker reporting.

NYSE Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.1.5. Floor Broker Routes an Order to an Algorithm Operated by Another Broker-Dealer

This scenario illustrates the CAT reporting requirements when a floor broker receives an order and routes the order to a third party algorithm operated by another broker-dealer. In this scenario, Industry Member Broker 1 receives a customer order, and further routes the customer order to a floor broker within the same broker-dealer that uses a separate IMID.

Upon receipt of the order, the floor broker routes the order to a third party algorithm operated by another broker-dealer. The third party algorithm, which is operated by a registered broker-dealer, routes part of the order to the NYSE for execution and the rest of the order to an away exchange.

Industry Member Broker 1's upstairs desk (FRMA) is required to report:

- The receipt of the order from the customer (New Order event)
- The route of the order to its floor broker (Order Route event)

Industry Member Broker 1's floor broker (FBKA) is required to report:

- The receipt of the order from Broker 1's upstairs desk (Order Accepted event)
- The route of the order to the third party algorithm (Order Route event)

The broker-dealer operating the algorithm is required to report:

- The receipt of the order (Order Accepted event)
- The partial route of the order to NYSE (Order Route event)
- The partial route of the order to an away market (Order Route event)

In this scenario, the reporting requirements for the third party algorithm are the same if algorithm is acting as a broker-dealer or acting solely as a technology provider. Refer to [CAT FAQ L1](#) for additional information on equity floor broker reporting.

NYSE Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.2. Cboe Floor Trader Scenarios

This section illustrates the CAT reporting requirements for Cboe Floor Brokers and Cboe Floor Market Makers.

8.2.1. Cboe Options Floor Broker Receives and Routes Order to Cboe Options Matching Engine for Further Handling and Execution

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 receives a simple electronic options order from a customer, and routes the order through the Cboe Options exchange systems to an Industry Member Floor Broker.

The Floor Broker then determines to route the order through the Cboe Options exchange systems to the exchange matching engine so that the order can electronically trade or book. Once there, the order is fully executed via the exchange matching engine. Note that in this scenario “Broker 1” could be an Industry Member located off or on the Cboe Options exchange trading floor, including a floor broker.

Industry Member Broker 1 is required to report:

- The receipt of the order from the customer (New Option Order event)
- The route of the order to the exchange (Option Order Route event)

The MOOR event must also include *handlingInstructions* values 'DIR' (Directed Orders) and 'FB' (Cboe Options Floor Broker) to denote the route to Floor Broker.

Industry Member Floor Broker is required to report:

- The receipt of the order from the exchange (Option Order Accepted event)
- The route of the order to the exchange to electronically trade or book (Option Order Route event must have a *timeInForce* value that is not 'IOR' (Immediate or Return))

Since Floor Broker is seeking to trade or book the order which would relinquish control of the order to the matching engine, the *timeInForce* field must not be populated as 'IOR' on the route to the exchange matching engine.

Cboe Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.2.2. Cboe Options Floor Broker Receives and Routes an Order to Exchange Matching Engine with Instructions to Return any Unexecuted Portion to the Floor Broker

This scenario illustrates the CAT reporting requirements when a customer order is received manually by an Industry Member Broker 1. The order is systematized by Broker 1 and electronically routed through the Cboe Options exchange systems to an Industry Member Floor Broker.

The Floor Broker then determines to route the order through the Cboe Options exchange systems to the exchange matching engine with instructions to return to the Floor Broker any remainder of the order that is not immediately executed. The order is then partially executed via the exchange matching engine, and the remainder of the order is returned to the floor broker for further handling and execution in open outcry.

Note that in this scenario “Broker 1” could be an Industry Member located off or on the Cboe Options exchange trading floor, including a floor broker.

Industry Member Broker 1 is required to report:

- The manual receipt of the order from the customer (New Option Order event)
 - The route of the order to the exchange (Option Order Route event)
- The MOOR event must also include *handlingInstructions* values 'DIR' (Directed Orders) and 'FB' (Cboe Options Floor Broker) to denote the route to Floor Broker.

Industry Member Floor Broker is required to report:

- The receipt of the order from the exchange (Option Order Accepted event)
- The route of the order to the exchange to electronically trade immediately and return any remainder (Option Order Route event with a *timeInForce* value of 'IOR')

Cboe Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.2.3. Industry Member Cancels a Route to a Cboe Options Floor Broker

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 receives a simple electronic options order from a customer, and routes the order through the Cboe Options exchange systems to an Industry Member Floor Broker. Broker 1 then determines to cancel the route that was sent to Floor Broker, and directs the route cancel instruction through the exchange machine engine to Floor Broker. Floor Broker cancels the order on its books and records, and subsequently cancels the order on the matching engine.

In this scenario, the order remains open on Broker 1's books and records for further handling.

Note that in this scenario "Broker 1" could be an Industry Member located off or on the Cboe Options exchange trading floor, including a floor broker.

Industry Member Broker 1 is required to report:

- The receipt of the order from the customer (New Option Order event)
- The route of the order to the exchange (Option Order Route event)

The MOOR event must also include *handlingInstructions* values 'DIR' (Directed Orders) and 'FB' (Cboe Options Floor Broker) to denote the route to Floor Broker.

- The cancellation of the Route to the Floor Broker (Option Route Cancelled event)

Industry Member Floor Broker is required to report:

- The receipt of the order from the exchange (Option Order Accepted event)
- The cancellation of the order (Option Order Cancelled event)

Cboe Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

The Floor Broker may alternatively choose to report a separate Option Order Cancel Request event to capture the request time. |
| 10 | Order is cancelled on Cboe Options exchange system | <i>Exchange reports a Participant Option Order Cancelled event</i> | |

8.2.4. Cboe Options Floor Broker Manually Trades an Options Order Against a Market Maker in Open Outcry

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 receives a simple electronic options order from a customer, and directs the order through the Cboe Options exchange systems to an Industry Member Floor Broker. Floor Broker asks the trading crowd for a market

and Market Maker 1 provides verbal quotes, then Floor Broker verbally represents the order to the crowd in open outcry and trades the order against Market Maker 1's verbal quote (i.e., the order is manually executed by Floor Broker with Market Maker 1 in open outcry). The execution is then communicated to the exchange for trade reporting.

Note that in this scenario "Broker 1" could be an Industry Member located off or on the Cboe Options exchange trading floor, including a floor broker.

Industry Member Broker 1 is required to report:

- The receipt of the option order from the customer (New Option Order event)
 - The route of the order to the exchange (Option Order Route event)
- The MOOR event must also include *handlingInstructions* values 'DIR' (Directed Orders) and 'FB' (Cboe Options Floor Broker) to denote the route to Floor Broker.

Industry Member Floor Broker is required to report:

- The receipt of the order from the exchange (Option Order Accepted event)
- The trade executed manually on the exchange floor in Open Outcry (Option Trade event)

Note that Floor Broker's request for market from the trading crowd is not reportable to CAT (requests for quotes and indications of interest are not reportable to CAT, refer to [CAT FAQ B3](#) for more information).

Note also that Floor Broker's representation of the order to the crowd is not currently reportable to CAT (floor broker verbal announcements of firm bids and offers on an exchange trading floor that are

otherwise reported as systematized orders are subject to the [SEC's November 12, 2020 order](#) granting a temporary conditional exemption relating to the reporting of certain on and off floor activities until July 31, 2023).

Industry Member Market Maker 1 is required to report:

- The trade executed manually on the exchange floor in Open Outcry (Option Trade event)

Note that Market Maker 1's verbal quote is not currently reportable to CAT (market maker verbal announcements of firm quotes on an exchange trading floor are subject to the [SEC's November 12, 2020 order](#) granting a temporary conditional exemption relating to the reporting of certain on and off floor activities until July 31, 2023).

Both Floor Broker and Market Maker 1 are required to report a MOOT event to CAT reflecting their individual sides of the execution. Floor Broker must capture the *orderID* in the *sellDetails* of its MOOT event in order to link to its related MOOA event. Since Market Maker 1 was not required to report an MOOA event, Market Maker 1 must populate the *firmDesignatedID* field in the *buyDetails* of its MOOT event reflecting the FDID of the account associated with the execution.

Cboe Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.2.5. Cboe Options Floor Broker Manually Trades the Options Leg of a Complex Order Against a Cboe Options Market Maker Verbal Quote in Open Outcry then the Floor Broker and Market Maker Each Route their Side of the Equity Leg to another Industry Member

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 receives a complex order with an equity buy leg from a customer, and directs the order through the Cboe Options exchange systems to an Industry Member Floor Broker.

The Floor Broker asks the trading crowd for a market and Market Maker 1 provides a verbal quote, then Floor Broker verbally represents the complex order to the crowd in open outcry and trades the complex order with Market Maker 1 at a net price, with the execution of the options legs on the Cboe Options exchange at a given price being contingent on the execution of the equity leg on another trading venue at a given price. The execution of the options leg is then communicated to the exchange for trade reporting. In addition, both Floor Broker and Market Maker 1 each separately route their respective sides of the equity leg to Broker 2, who crosses the equity orders.

Note that in this scenario “Broker 1” could be an Industry Member located off or on the Cboe Options exchange trading floor, including a floor broker.

Industry Member Broker 1 is required to report:

- The receipt of the complex order from the customer (Multi-Leg New Order event)
- The route of the complex order to the exchange (Multi-Leg Order Route event with *handlingInstructions* 'DIR' (Directed Orders) and 'FB' (Cboe Options Floor Broker) to denote the route to Floor Broker).

Industry Member Floor Broker is required to report:

- The receipt of the complex order from the exchange (Multi-Leg Order Accepted event)
- The trade of the options leg executed manually on the exchange floor in Open Outcry (Option Trade event)
- The route of the equity leg buy order to Broker 2 (Order Route event)

Note that Floor Broker's request for market from the trading crowd is not reportable to CAT (requests for quotes and indications of interest are not reportable to CAT). Note also that Floor Broker's representation of the order to the crowd is not currently reportable to CAT (floor broker verbal announcements of firm bids and offers on an exchange trading floor that are otherwise reported as systematized orders are subject to the [SEC's November 12, 2020 order](#) granting a temporary conditional exemption relating to the reporting of certain on and off floor activities until July 31, 2023).

Industry Member Market Maker 1 is required to report:

- The trade of the options leg executed manually on the exchange floor in Open Outcry (Option Trade event)
- The origination of the equity leg order (New Order event with *handlingInstructions* 'OPT')
- The route of the equity leg sell order to Broker 2 (Order Route event with *handlingInstructions* 'OPT')

Note that Market Maker 1's verbal quote is not currently reportable to CAT (market maker verbal announcements of firm quotes on an exchange trading floor are subject to the [SEC's November 12, 2020 order](#) granting a temporary conditional exemption relating to the reporting of certain on and off floor activities until July 31, 2023). However, the Market Maker must report the origination of the equity leg order that is routed to Broker 2.

Industry Member Broker 2 is required to report:

- The receipt of the buy order from Floor Broker (Order Accepted event with *handlingInstructions* 'OPT')
- The receipt of the sell order from Market Maker 1 (Order Accepted event with *handlingInstructions* 'OPT')
- The execution of the orders from Floor Broker and Market Maker 1 (Trade event)

Both Floor Broker and Market Maker 1 are required to report a MOOT event to CAT reflecting their individual sides of the execution. Floor Broker must capture the *orderID* in the *sellDetails* of its MOOT event in order to link to its related MLOA event. Since Market Maker 1 was not required to report an MLOA event, Market Maker 1 must populate the *firmDesignatedID* field in the *buyDetails* of its MOOT event reflecting the FDID of the account associated with the execution.

Cboe Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

| 13 | Broker 2 crosses the Buy and Sell equity leg orders | <i>Broker 2 reports a Trade event</i> type: MEOT tradeKeyDate: 20210222T000000 tradeID: TXYZ123 symbol: XYZ eventTimestamp: 20210222T153039.853456 manualFlag: false cancelFlag: false cancelTimestamp: quantity: 7500 price: 33 capacity: A tapeTradeID: TRF123 marketCenterID: DN sideDetailsInd: NA buyDetails: orderKeyDate: 20210222T000000 orderID: ORD123 side: B sellDetails: orderKeyDate: 20210222T000000 orderID: ORD456 side: SL | |

In the scenario above, upon determining the price of the equity leg, both Floor Broker and Market Maker 1 each separately route their respective sides of the equity leg to Broker 2, who crosses the equity orders. Another common scenario that occurs is one where Market Maker 1 would ask Floor Broker to route Market Maker 1's side of the equity leg to Broker 2 on Market Maker 1's behalf. In that scenario, Floor Broker would route both Floor Broker's buy-side equity leg and Market Maker 1's sell-side equity leg to Broker 2 for execution. In that scenario, if everything else about the fact pattern remains the same, the following events would be reported to CAT:

Industry Member Broker 1 is required to report:

- The receipt of the complex order from the customer (Multi-Leg New Order event)
- The route of the complex order to the exchange (Multi-Leg Order Route event with *handlingInstructions* 'DIR' and 'FB')

Industry Member Floor Broker is required to report:

- The receipt of the complex order from the exchange (Multi-Leg Order Accepted event)
- The trade of the options leg executed manually on the exchange floor in Open Outcry (Option Trade event)
- The receipt of the equity leg order from Market Maker 1 (Order Accepted event with *handlingInstructions* 'OPT')
- The route of the equity leg buy order to Broker 2 (Order Route event)
- The route of the equity leg sell order to Broker 2 (Order Route event with *handlingInstructions* 'OPT')

Industry Member Market Maker 1 is required to report:

- The trade of the options leg executed manually on the exchange floor in Open Outcry (Option Trade event)
- The origination of the equity leg order (New Order event with *handlingInstructions* 'OPT')
- The route of the equity order to Floor Broker (Order Route event with *handlingInstructions* 'OPT')

Industry Member Broker 2 is required to report:

- The receipt of the equity leg buy order from Floor Broker (Order Accepted event)
- The receipt of the equity leg sell order from Floor Broker (Order Accepted event)
- The execution of the orders from Floor Broker (Trade event)

Cboe Options exchange is required to report as outlined in the [CAT Reporting Technical Specifications for Plan Participants](#).

8.3. BOX Floor Broker Scenarios

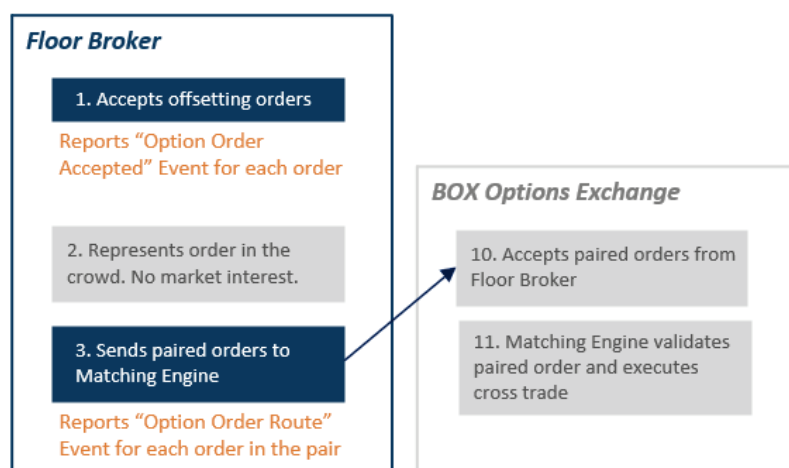

This section illustrates the CAT reporting requirements for BOX Floor Members.

8.3.1. BOX Options Floor Broker Receives Offsetting Orders for Crossing in Open Outcry (no market interference)

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 receives a simple option order from a customer, solicits the contra side and routes the offsetting orders to an Industry Member Floor Broker on the BOX Exchange.

In this scenario, Broker 1 receives an order from a customer and calls Broker 2 to solicit the contra side of the order. Broker 2 verbally responds to Broker 1's solicitation and verbally originates/routes an order to Broker 1. Broker 1 verbally receives the order from Broker 2 and routes both offsetting orders to the Floor Broker. The Floor Broker represents the trade in the crowd and there is no market interest, so the Floor Broker routes the paired orders to the exchange Matching Engine for execution.

For illustration purposes, this scenario begins with the receipt of the offsetting orders by the BOX Floor Broker. The reporting requirements for one possible workflow leading up to the offsetting order routes can be found in [Scenario 3.7.4, \(Steps 1 - 7\)](#)

Industry Member Floor Broker is required to report:

- The receipt of the offsetting orders from Broker 1 (Option Order Accepted events)

- The route of the paired orders to the exchange to confirm and execute the floor cross trade
(Option Order Route events)

BOX Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.3.2. BOX Options Floor Broker Receives Offsetting Orders for Crossing in Open Outcry (Floor Market Maker takes partial contra side)

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 receives a simple option order from a customer, solicits the contra side and routes the order to an Industry Member Floor Broker on the BOX Exchange.

In this scenario, Broker 1 receives an order from a customer and calls Broker 2 to solicit the contra side of the order. Broker 2 verbally responds to Broker 1's solicitation and verbally originates/routes an order to Broker 1. Broker 1 verbally receives the order from Broker 2 and routes both offsetting orders to the Floor Broker. The Floor Broker represents the trade in the crowd and a Floor Market Maker wants to participate in the cross for a partial quantity on the contra side. The Floor Broker pairs Broker 2's order with the customer's order routes the paired order to the exchange Matching Engine for execution. Upon execution, the Floor Broker updates the contra side trade to assign a partial quantity to the Market Maker.

For illustration purposes, this scenario begins with the receipt of two offsetting orders by the BOX Floor Broker. The reporting requirements for one possible workflow leading up to the paired orders can be found in [Scenario 3.7.4, Steps 1 - 7](#).

Industry Member Floor Broker is required to report:

- The receipt of the orders from Broker 1 (Option Order Accepted events)
- The route of the paired orders to the exchange to confirm and execute the floor cross trade (Option Order Route events)

Industry Member Market Maker is required to report:

- The trade executed by Floor Broker on the BOX Exchange (Option Trade event)

Note that Market Maker 1's verbal quote is not currently reportable to CAT (market maker verbal announcements of firm quotes on an exchange trading floor are subject to the [SEC's November 12, 2020 order](#) granting a temporary conditional exemption relating to the reporting of certain on and off floor activities until July 31, 2023).

BOX Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.4. PHLX Floor Broker Scenarios

This section illustrates the CAT reporting requirements for PHLX Floor Members.

8.4.1. PHLX Options Floor Broker Receives Offsetting Orders for Crossing in Open Outcry (no market interference)

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 routes two offsetting simple option orders to an Industry Member Floor Broker on the PHLX Exchange for trading in Open Outcry. In this scenario, Broker 1 routes two offsetting orders to the Floor Broker. The Floor Broker represents the orders in the crowd and there is no market interest, so the Floor Broker sends a trade request to the Exchange.

For illustration purposes, this scenario begins with the route of offsetting orders by Broker 1 to the PHLX Floor Broker. The reporting requirements for one possible workflow leading up to the offsetting orders can be found in 3.7.4, (Steps 1 – 7).

Industry Member Broker 1 is required to report:

- The route of the order to Floor Broker (Option Order Route events)

Industry Member Floor Broker is required to report:

- The receipt of the orders from Broker 1 (Option Order Accepted events)
- The initial side of the open outcry trade sent to the exchange (Option Trade event)
- The contra side of the open outcry trade sent to the exchange (Option Trade event)

PHLX Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.4.2. PHLX Options Floor Broker Receives Offsetting Orders for Crossing in Open Outcry (Floor Market Maker takes partial contra side)

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 routes offsetting simple option orders to an Industry Member Floor Broker on the PHLX Exchange.

In this scenario, Broker 1 routes two offsetting orders to the Floor Broker. The Floor Broker represents the orders in the crowd and a Floor Market Maker elects to participate in the cross for a partial quantity on the contra side. The Floor Broker sends a trade request to the Exchange, to confirm and execute the trade, for the total quantity on the agency side of the order.

For illustration purposes, this scenario begins with the route of the offsetting orders by Broker 1 to the PHLX Floor Broker. The reporting requirements for one possible workflow leading up to the offsetting orders can be found in 3.7.4, Steps 1 - 7.

Note that Market Maker's verbal quote is not currently reportable to CAT (market maker verbal announcements of firm quotes on an exchange trading floor are subject to the SEC's November 12, 2020 order granting a temporary conditional exemption relating to the reporting of certain on and off floor activities until July 31, 2023). Market Maker is required to report a MOOT event to CAT reflecting their side of the execution.

Industry Member Broker 1 is required to report:

- The route of the order to Floor Broker (Option Order Route events)

Industry Member Floor Broker is required to report:

- The receipt of the simple option orders from Broker 1 (Option Order Accepted events)
- The open outcry trades for the initial side order of 33 total contracts (Option Trade events)
- The open outcry trade for the contra order of 20 contracts (Option Trade event)

Industry Member Market Maker is required to report:

- The open outcry trade for 13 contracts executed by Floor Broker on the PHLX Exchange (Option Trade event)

PHLX Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.4.3. PHLX Options Floor Broker Receives Offsetting Multi-leg Orders for Crossing in Open Outcry (Floor Market Maker takes full contra side)

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 routes two offsetting multi-leg orders to an Industry Member Floor Broker on the PHLX Exchange for trading in Open Outcry.

In this scenario, Broker 1 routes two multi-leg orders to the Floor Broker. The Floor Broker represents the orders in the crowd and a Floor Market Maker elects to participate in the cross for the full quantity of the contra side. The Floor Broker sends the trade requests for each option leg to the Exchange to confirm and execute the trades. The Floor Broker routes the initial side equity leg to Equity Broker 2 for execution. The Floor Market Maker routes the equity leg for the contra side to Equity Broker 2 for execution.

For illustration purposes, this scenario begins with the routes of two offsetting multi-leg orders by the Broker 1 to PHLX Floor Broker. The reporting requirements for one possible workflow leading up to the offsetting orders can be found in 3.6.6 (Steps 1 – 3)

Note that Market Maker's verbal quote for the option legs is not currently reportable to CAT (market maker verbal announcements of firm quotes on an exchange trading floor are subject to the SEC's November 12, 2020 order granting a temporary conditional exemption relating to the reporting of certain on and off floor activities until July 31, 2023). Market Maker is required to report a MOOT event to CAT reflecting their side of the execution for each option leg. Market Maker is also required to report the equity order origination (MENO event) and the route of that equity order for execution (MEOR event).

Industry Member Broker 1 is required to report:

- The route of the multi-leg orders to Floor Broker (Multi-Leg Order Route events)

Industry Member Floor Broker is required to report:

- The receipt of the multi-leg orders from Broker 1 (Multi-Leg Order Accepted events)
- The open outcry trades for the initial side order (Option Trade events)
- The route of the agency equity leg order to Equity Broker 2 (Order Route event)

Industry Member Market Maker is required to report:

- The open outcry trades executed by Floor Broker on the PHLX Exchange (Option Trade events)

- The origination of the equity leg order (New Order event)
- The route of the equity order to Equity Broker 2 (Order Route event)

Industry Member Equity Broker 2 is required to report:

- The receipt of the initial side order from Floor Broker (Order Accepted event)
- The receipt of the contra side order from Market Maker (Order Accepted event)
- The execution of the orders (Trade event)

PHLX Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.5. AMEROP/ARCAOP Floor Broker Scenarios

This section illustrates the CAT reporting requirements for Floor Members of the AMEROP and ARCAOP Exchanges trading on the UTP platform. The ARCAOP Exchange is scheduled to migrate to the Pillar trading platform in Q1 2022, at which time Floor Members should refer to Section 8.6 for reporting scenarios on the Pillar platform.

8.5.1. AMEROP/ARCAOP Options Floor Broker Receives an Order and Trades against a Floor Market Maker in Open Outcry

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 routes a simple option order to an Industry Member Floor Broker on the AMEROP/ARCAOP Exchange for trading in Open Outcry. In this scenario, Broker 1 sends an order to the Floor Broker. The Floor Broker represents the trade in the crowd and a Market Maker takes the contra side. The Floor Broker agrees to the trade in open outcry and sends an order message to the AMEROP/ARCAOP Exchange to confirm and execute the trade.

On the AMEROP/ARCAOP Options Exchange, Floor Broker open outcry trades are processed using Order Route messages to the exchange. The Exchange reports corresponding order accept messages and executes the floor trade against those orders. Note that Market Maker's verbal quote is not currently reportable to CAT (market maker verbal announcements of firm quotes on an exchange trading floor are subject to the SEC's November 12, 2020 order granting a temporary conditional exemption relating to the reporting of certain on and off floor activities until July 31, 2023). Market Maker is required to report a MOOT event to CAT reflecting their side of the execution.

Industry Member Broker 1 is required to report:

- The receipt of the simple option order from the Customer (Option New Order event)
- The route of the simple option order to Floor Broker (Option Order Route event)

Industry Member Floor Broker is required to report:

- The receipt of the option order from Broker 1 (Option Order Accepted event)
- The initial side open outcry order sent to the exchange (Option Order Route event)

Industry Member Market Maker is required to report:

- The open outcry TNT trade for the contra side (Option Trade event)

AMEROP and ARCAOP exchanges are required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.5.2. AMEROP/ARCAOP Options Floor Broker Receives Offsetting Orders for Crossing in Open Outcry (no market interference)

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 routes two offsetting simple option orders to an Industry Member Floor Broker on the AMEROP/ARCAOP Exchange for trading in Open Outcry. In this scenario, Broker 1 routes two offsetting orders to the Floor Broker. The Floor Broker represents the order in the crowd and there is no market interest, so the Floor Broker sends offsetting open outcry orders to the Exchange to confirm and execute the trade.

For illustration purposes, this scenario begins with the route of two offsetting orders by Broker 1 to the Floor Broker. The reporting requirements for one possible workflow leading up to the paired orders can be found in 3.7.4 (Steps 1 – 7).

On the AMEROP/ARCAOP Options Exchange, Floor Broker open outcry trades are processed using Order Route messages on the initial and contra sides to the exchange system. The Exchange reports corresponding order accept messages and executes the floor trade against those orders.

Industry Member Broker 1 is required to report:

- The route of the orders to Floor Broker (Option Order Route events)

Industry Member Floor Broker is required to report:

- The receipt of the orders from Broker 1 (Option Order Accepted events)
- The route of the initial and contra side open outcry orders to the exchange system (Option Order Route events)

AMEROP and ARCAOP exchanges are required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.5.3. AMEROP/ARCAOP Options Floor Broker Receives Offsetting Order for Crossing in Open Outcry (Floor Market Maker takes partial contra side)

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 routes two offsetting option orders to an Industry Member Floor Broker to cross on the AMEROP/ARCAOP Exchange, and a Market Maker breaks the cross.

In this scenario, Broker 1 routes two offsetting orders to the Floor Broker. The Floor Broker represents the order in the crowd and a Floor Market Maker elects to participate in the cross for a partial quantity on the contra side. The Floor Broker sends one order on the initial side for the Market Maker partial quantity and two additional offsetting orders (initial and contra sides) for the balance remaining to the AMEROP/ARCAOP Exchange to confirm and execute the trades.

For illustration purposes, this scenario begins with the route of two offsetting orders by Broker 1 to the Floor Broker. The reporting requirements for one possible workflow leading up to the paired orders can be found in 3.7.4 (Steps 1 – 7).

On the AMEROP/ARCAOP Options Exchange, Floor Broker open outcry trades are processed using Order Route messages on the initial and contra sides to the exchange system. The Exchange reports corresponding order accept messages and executes the floor trade against those orders. Note that Market Maker's verbal quote is not currently reportable to CAT (market maker verbal announcements of firm quotes on an exchange trading floor are subject to the SEC's November 12, 2020 order granting a temporary conditional exemption relating to the reporting of certain on and off floor activities until July 31, 2023). Market Maker is required to report a MOOT event to CAT reflecting their side of the execution.

Industry Member Broker 1 is required to report:

- The route of the orders to Floor Broker (Option Order Route events)

Industry Member Floor Broker is required to report:

- The receipt of the simple option orders from Broker 1 (Option Order Accepted events)
- The route of the open outcry orders (35 contracts and 25 contracts) for the initial side order of 60 total contracts (Option Order Route events)
- The route of the open outcry order for the contra order of 35 contracts (Option Order Route event)

Industry Member Market Maker is required to report:

- The open outcry TNT trade for 25 contracts executed by Floor Broker on the AMEROP Exchange (Option Trade event)

AMEROP and ARCAOP exchanges are required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.5.4. AMEROP/ARCAOP Options Floor Broker Receives Offsetting Multi-leg Orders with an Equity Leg for Crossing in Open Outcry (Floor Market Maker takes full contra side)

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 routes two offsetting multi-leg orders with an equity leg to an Industry Member Floor Broker on the AMEROP/ARCAOP Exchange for trading in Open Outcry.

In this scenario, Broker 1 routes two offsetting multi-leg orders to the Floor Broker. The Floor Broker represents the order in the crowd and a Floor Market Maker elects to participate in the cross for the full quantity of the contra side. The Floor Broker agrees to trade and sends the open outcry orders for the option legs to the Exchange to confirm and execute the trades. The Floor Broker also routes the equity legs to Equity Broker 2 for crossing.

For illustration purposes, this scenario begins with the route of two offsetting orders to the Floor Broker. The reporting requirements for one possible workflow leading up to the offsetting orders can be found in 3.6.6 (Steps 1 – 3)

Note that Market Maker's verbal quote for the option legs is not currently reportable to CAT (market maker verbal announcements of firm quotes on an exchange trading floor are subject to the SEC's November 12, 2020 order granting a temporary conditional exemption relating to the reporting of certain on and off floor activities until July 31, 2023). Market Maker is required to report a MOOT event to CAT reflecting their side of the execution for each option leg. Market Maker is also required to report the equity order origination (MENO event) and the route of that equity order for execution (MEOR event).

Industry Member Broker 1 is required to report:

- The route of the multi-leg orders to Floor Broker (Multi-Leg Order Route events)

Industry Member Floor Broker is required to report:

- The receipt of the multi-leg orders from Broker 1 (Multi-Leg Order Accepted events)

- The order routes for open outcry option leg trades for the initial side order (Option Order Route events)
- The receipt of the equity leg order from Market Maker (Order Accepted event)
- The route of the equity leg orders to Equity Broker 2 (Order Route events)

Industry Member Market Maker is required to report:

- The origination of the equity leg order (New Order event)
- The route of the equity order to Floor Broker (Order Route event)
- The open outcry trades executed by Floor Broker on the Exchange (Option Trade events)

Industry Member Equity Broker 2 is required to report:

- The receipt of the equity leg orders from Floor Broker (Order Accepted events)
- The execution of the equity leg orders (Trade event)

AMEROP and ARCAOP exchanges are required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.5.5. AMEROP/ARCAOP Options Floor Broker Executes a Manual Trade on the Exchange Floor

This scenario illustrates the CAT reporting requirements when an Industry Member Floor Broker receives an order that must be processed manually due to special handling requirements. Cabinet trades and FLEX options are two examples of floor trades that cannot be processed via exchange system.

The example shows a FLEX option trade, which cannot be processed systematically. The Floor Broker reports receipt of the orders from Broker 1 but does not report an order route to the exchange. Floor Broker announces the order in Open outcry and a Market Maker takes a partial quantity on the contra side. The trades are executed manually on the floor and entered directly into the GEMS system. One trade is entered to represent the partial quantity traded against Market Maker 1, and a second trade is entered for the balance that is crossed by Floor Broker. Floor Broker reports Option Trade events to link the exchange trades back to the initial and contra orders from Broker 1. Market Maker reports an Option Trade event for the partial contra quantity.

For illustration purposes, this scenario begins with the route of two offsetting orders from Broker 1 to the ARCAOP Floor Broker. The reporting requirements for one possible workflow leading up to the offsetting orders can be found in 3.7.4 (steps 1 – 7).

Industry Member Broker 1 is required to report:

- The route of the option order to Floor Broker (Option Order Route)

Industry Member Floor Broker is required to report:

- The receipt of the manual order from Broker 1 (Option Order Accepted event)
- The execution of the manual trade for the full quantity of the initial order (Option Trade event)
- The execution of the manual trade for the partial quantity of the contra order (Option Trade event)

Industry Member Market Maker is required to report:

- The execution of the manual trade for the partial contra quantity (Option Trade event)

AMEROP and ARCAOP exchanges are required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.6. ARCAOP Floor Broker Scenarios (Pillar Platform)

This section illustrates the CAT reporting requirements for ARCAOP Floor Members using the Pillar platform.

8.6.1 ARCAOP Options Floor Broker Receives an Order and Trades against a Floor Market Maker in Open Outcry

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 routes a simple option order to an Industry Member Floor Broker on the ARCAOP Exchange for trading in Open Outcry. In this scenario, Broker 1 sends an order to the Floor Broker. The Floor Broker sends the order to the ARCAOP Exchange, represents the trade in the crowd and a Market Maker takes the contra side. The Floor Broker agrees to the trade in open outcry and sends an order message to the ARCAOP Exchange to confirm and execute the trade.

On the ARCAOP Options exchange, Floor Broker sends the initial side open outcry order to the Exchange for Trading Official review and approval. The Exchange reports a corresponding order accept message. The Floor Broker then represents the order in the trading crowd. Once the trade has been agreed by all parties and approved by the Trading Official, the Floor Broker sends a trade request to the exchange. The ARCAOP exchange prints floor trade is against the initial order. Once the trade is entered, the floor broker subsequently updates the trade to include the full allocation information, including the

parties and clearing information for the contra side of the trade. When all trade details are confirmed, the contra party (or parties) to the trade reports the option trade events to CAT.

Note that Market Maker's verbal quote is not currently reportable to CAT (market maker verbal announcements of firm quotes on an exchange trading floor are subject to the [SEC's November 12, 2020 order](#) granting a temporary conditional exemption relating to the reporting of certain on and off floor activities until July 31, 2023). Market Maker is required to report a MOOT event to CAT reflecting their side of the execution.

Industry Member Broker 1 is required to report:

- The receipt of the simple option order from the Customer (New Option Order event)
- The route of the simple option order to Floor Broker (Option Order Route event)

Industry Member Floor Broker is required to report:

- The receipt of the option order from Broker 1 (Option Order Accepted event)
- The initial side open outcry order sent to the exchange (Option Order Route event)

Industry Member Market Maker is required to report:

- The open outcry trade for the contra side (Option Trade event)

ARCAOP Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.6.2 ARCAOP Options Floor Broker Receives Offsetting Orders for Crossing in Open Outcry (No Market Interference)

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 routes two offsetting simple option orders to an Industry Member Floor Broker on the ARCAOP Exchange for trading in Open Outcry. In this scenario, Broker 1 routes offsetting option orders to the Floor Broker. Floor Broker sends an open outcry order for the initial side to the exchange for Trading Official review and approval. The Floor Broker represents the order in the trading crowd and there is no market interest, so Floor Broker enters a trade request to ARCAOP Exchange to confirm and execute the trade. Once the trade is executed on exchange, the Floor Broker updates the trade to reflect the parties and clearing information

For illustration purposes, this scenario begins with the route of offsetting orders by Broker 1 to the ARCAOP Floor Broker. The reporting requirements for one possible workflow leading up to the orders can be found in 3.7.4.(steps 1 – 7)

On the ARCAOP Options exchange, Floor Broker open outcry trades are processed using an Option Order Route message on the initial side to the exchange system. The Exchange reports a corresponding order accept message and the floor trade is executed against this order to link the initial side. The Floor Broker then enters post-trade updates to assign the parties and clearing information for both sides of the trade.

Industry Member Broker 1 is required to report:

- The route of the orders to the Floor Broker (Option Order Route events)

Industry Member Floor Broker is required to report:

- The receipt of the orders from Broker 1 (Option Order Accepted events)
- The route of the initial and contra side open outcry orders to the exchange system (Option Order Route events)
- The trade for the contra side (Option Trade event)

ARCAOP Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.6.3 ARCAOP Options Floor Broker Receives Offsetting Orders for Crossing in Open Outcry (Floor Market Maker takes partial contra side)

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 routes two offsetting option orders to an Industry Member Floor Broker to cross on the ARCAOP Exchange, and a Market Maker breaks the cross.

In this scenario, Broker 1 routes two offsetting orders to the Floor Broker. The Floor Broker routes the initial side order to the ARCAOP Options Exchange, which is displayed to the Trading Official. The Floor Broker then represents the order in the crowd and a Floor Market Maker elects to participate in the cross for a partial quantity on the contra side. The Floor Broker submits the trade request to the ARCAOP Options Exchange, which confirms and prints the trade. The Floor Broker then updates the trade to reflect the contra parties and clearing details.

For illustration purposes, this scenario begins with the route of two offsetting orders from Broker 1 to the ARCAOP Floor Broker. The reporting requirements for one possible workflow leading up to the offsetting orders can be found in 3.7.4 (steps 1 – 7).

On the ARCAOP Options exchange, the Floor Brokers routes the initial side order to the exchange system. The Exchange reports a corresponding order accept message and this order is displayed to the Trading Official. The Floor Broker verbally represents the order in the trading crowd. Floor Market Makers may respond with verbal quotes to elect to participate in the trade. Once the trade is agreed, the Floor Broker enters a trade request into the Pillar system, which is confirmed and processed by the exchange against the initial order. The floor broker subsequently updates the trade to include the full allocation information, including the parties and clearing information for the contra side of the trade. When all trade details are confirmed, the contra party (or parties) to the trade reports the member trade events to CAT.

Note that Market Maker's verbal quote is not currently reportable to CAT (market maker verbal announcements of firm quotes on an exchange trading floor are subject to the SEC's [November 12, 2020 order](#) granting a temporary conditional exemption relating to the reporting of certain on and off floor activities until July 31, 2023). Market Maker is required to report a MOOT event to CAT reflecting their side of the execution.

Industry Member Broker 1 is required to report:

- The route of the two simple option orders to Floor Broker (Option Order Route events)

Industry Member Floor Broker is required to report:

- The receipt of the two simple option orders from Broker 1 (Option Order Accepted events)
- The open outcry order for the initial side order of 100 total contracts (Option Order Route event)
- The open outcry trade for the contra side order of 65 contracts (Option Trade event)

Industry Member Market Maker is required to report:

- The open outcry trade for 35 contracts executed by Floor Broker on the ARCAOP Exchange (Option Trade event)

ARCAOP Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

8.6.4 ARCAOP Options Floor Broker Receives Offsetting Multi-leg Orders with an Equity Leg for Crossing in Open Outcry (Floor Market Maker takes full contra side)

This scenario illustrates the CAT reporting requirements when Industry Member Broker 1 routes two offsetting multi-leg orders with equity leg to an Industry Member Floor Broker on the ARCAOP Exchange for trading in Open Outcry.

In this scenario, Broker 1 routes two multi-leg orders to the Floor Broker. The Floor Broker accepts both orders and routes the initial side multi-leg order for the option legs only to the exchange for display to the Trading Official. The Floor Broker represents the order in the crowd and a Floor Market Maker elects to participate in the cross for the full quantity of the contra side. The Floor Broker agrees to trade and sends trade requests for the option legs to the ARCAOP Exchange to confirm and print the trades. The Floor Broker also routes the offsetting equity leg orders to Equity Broker 2 for crossing.

For illustration purposes, this scenario begins with the route of two offsetting multi-leg orders by Broker 1 to the ARCAOP Floor Broker. The reporting requirements for one possible workflow leading up to the paired orders can be found in 3.6.6 (Steps 1 – 3)

Note that Market Maker's verbal quote for the option legs is not currently reportable to CAT (market maker verbal announcements of firm quotes on an exchange trading floor are subject to the [SEC's](#)

[November 12, 2020 order](#) granting a temporary conditional exemption relating to the reporting of certain on and off floor activities until July 31, 2023). Market Maker is required to report a MOOT event to CAT reflecting their side of the execution for each option leg. Market Maker is also required to report the equity order origination (MENO event) and the route of that equity order for execution (MEOR event).

Industry Member Broker 1 is required to report:

- The routes of the two offsetting multi-leg orders to Floor Broker (Multi-Leg Order Route events)

Industry Member Floor Broker is required to report:

- The receipt of both multi-leg orders from Broker 1 (Multi-Leg Order Accepted events)
- The route of the open outcry multi-leg order for the option legs of the initial side order (Multi-Leg Order Route events)
- The receipt of the equity leg order from Market Maker (Order Accepted event)
- The route of the two offsetting equity leg orders to Equity Broker 2 (Order Route events)

Industry Member Market Maker is required to report:

- The origination of the equity leg order (New Order event)
- The route of the equity order to Floor Broker (Order Route event)
- The open outcry trades for each option leg executed by Floor Broker on the ARCAOP Exchange (Option Trade events)

Industry Member Equity Broker 2 is required to report:

- The receipt of the two offsetting equity leg orders from Floor Broker (Order Accepted events)
- The execution of the equity leg orders (Trade event)

ARCAOP Options exchange is required to report as outlined in the [CAT Plan Participant Reporting Technical Specifications](#).

9. TRF Scenarios

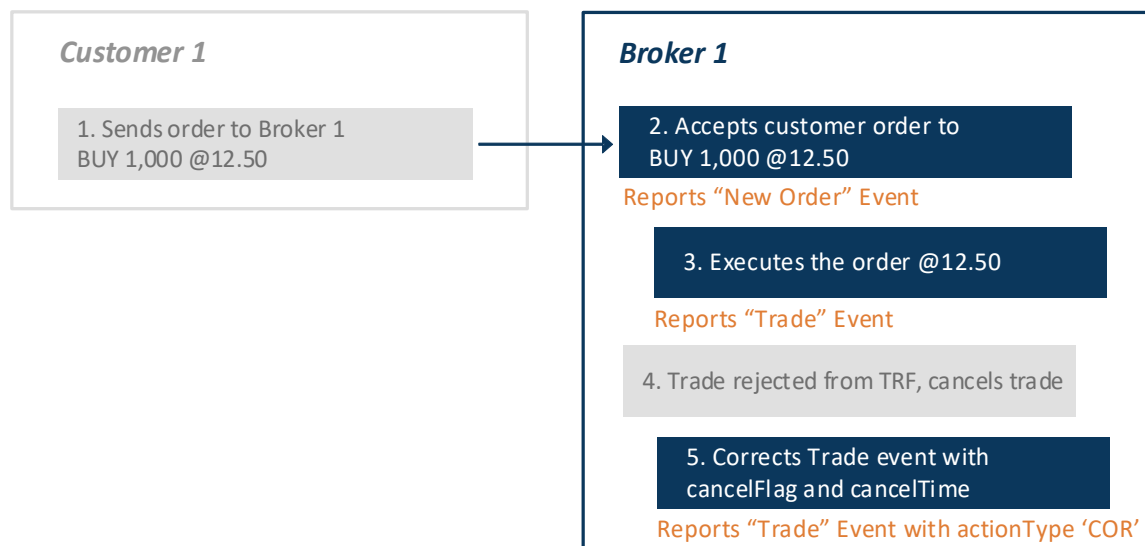

9.1.1. Trade is Cancelled after TRF Rejection due to 'Price out of Range'

This scenario illustrates the CAT reporting requirements when an Industry Member cancels a trade after receiving a TRF Rejection due to 'Price out of Range'. This is an edge case scenario and does not frequently occur.

In this scenario, an Industry Member receives an order to buy 1,000 shares of XYZ and executes the shares from a proprietary account at a price of 12.50. The Industry Member submits a media trade report to the TRF, but the trade report is rejected due to 'Price out of Range'. Instead of repairing the media trade report and resubmitting to the TRF, the Industry Member determines to cancel the trade.

For CAT reporting, the *cancelFlag* and *cancelTimestamp* fields are only required in a Trade event in instances where cancel information is not captured in the TRF. Since the media trade report was not repaired, the cancel information was therefore not captured in the TRF, and the Industry Member is required to populate the *cancelFlag* and *cancelTimestamp* fields in its CAT Trade event reflecting the time the Industry Member cancelled the trade.

This scenario illustrates the requirement that if the Industry Member is unable to populate the *cancelFlag* and *cancelTimestamp* fields in its initial Trade event submission to CAT, then the Industry Member must submit a 'COR' event to capture these fields.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The execution of the customer order (Trade event)
- The correction of the Trade event reflecting the addition of the *cancelFlag* and *cancelTimestamp* fields (Trade event with *actionType* 'COR')

Broker 1 may alternatively choose to combine the trade and cancel information into one MEOT event with the *cancelFlag* set to 'true' and the *cancelTimestamp* field populated if it is able to do so.

9.1.2. Trade is Updated at the Trade Reporting Facility Using the Same Compliance ID or FINRA Control Number

This scenario illustrates the CAT reporting requirements when an Industry Member corrects a trade without canceling the original trade report. Instead, the Industry Member submits a corrected trade report to the relevant trade reporting facility and reuses the Compliance ID or FINRA Control Number from the original trade report.

In this scenario, an Industry Member executes a trade for 1,000 shares and correctly reports the MEOT event to CAT for 1,000 shares, but incorrectly reports the trade report to a trade reporting facility for 100 shares. The relevant trade reporting facility allows for corrections of trade reports without canceling the original trade report and will link the corrected trade report by referencing the Compliance ID or FINRA Control Number of the original trade report.

The Industry Member corrects the trade report to 1,000 shares without canceling the original trade report, and the Compliance ID or FINRA Control Number on the corrected trade report remains the same as the Compliance ID or FINRA Control Number on the original trade report.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The execution of the customer order (Trade event linking to original trade report)

In this scenario, the Industry Member is required to report only a single MEOT event to CAT which will directly link to the original trade report through the *tapeTradeID* field, and will link by reference to the updated trade report which used the same Compliance ID or FINRA Control Number. Broker 1 must not submit a separate MEOT event to CAT reflecting the corrected trade report in this scenario.

If the Trade Reporting facility allows for corrections of trade reports without canceling the original trade report, but Broker 1 still chooses to cancel the original trade report, Broker 1 must follow the guidance outlined in Scenarios 9.1.3 and 9.1.4.

| 4 | Broker 1 corrects the trade report to correctly reflect 1,000 shares and uses the same Compliance ID or FINRA Control Number from the original trade report | NA | In its updated Trade report to the FINRA Facility, Broker 1 populates the Compliance ID or FINRA Control Number = TRF123, which will link it to the initially submitted trade report with the incorrect quantity of 100, and will link by reference to the MEOT event that was already correctly submitted to CAT. |

9.1.3. Trade is Cancelled at the Trade Reporting Facility and a New Trade is Reported Using the Same Compliance ID or FINRA Control Number

This scenario illustrates the CAT reporting requirements when an Industry Member cancels a trade at a trade reporting facility and reuses the Compliance ID or FINRA Control Number from the original trade report.

In this scenario, an Industry Member executes a trade for 1,000 shares and correctly reports the MEOT event to CAT for 1,000 shares, but incorrectly reports the trade report to a trade reporting facility for 100 shares. The Industry Member cancels the original trade report for 100 shares and submits a new trade report for 1,000 shares, and the Compliance ID or FINRA Control Number on the new trade report remains the same as the Compliance ID or FINRA Control Number on the original trade report.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The execution of the customer order (Trade event linking to both trade reports)

In this scenario, the Industry Member is required to report only a single MEOT event to CAT which will directly link to the both trade reports through the *tapeTradeID* field. Broker 1 must not submit a separate MEOT event to CAT reflecting the corrected trade report in this scenario.

9.1.4. Trade is Cancelled at the Trade Reporting Facility and a New Trade is Reported Using a New Compliance ID or FINRA Control Number

This scenario illustrates the CAT reporting requirements when an Industry Member cancels a trade at a trade reporting facility and reports a new trade report with a new Compliance ID or FINRA Control Number than the original trade report.

In this scenario, an Industry Member executes a trade for 1,000 shares and correctly reports the MEOT event to CAT for 1,000 shares, but incorrectly reports the trade report to a trade reporting facility for 100 shares. The Industry Member cancels the original trade report for 100 shares and submits a new trade report for 1,000 shares, but uses a different Compliance ID or FINRA Control Number on the new trade report.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The execution of the customer order (Trade event linking to the original trade report and Trade event linking to the new trade report)

In this scenario, since a new Compliance ID or FINRA Control Number was used, the Industry Member is required to report to CAT an MEOT event linking to the original trade report, and an MEOT event linking to the new trade report.

| 4 | Broker 1 cancels the trade report for 1000 shares with incorrect price and reports a new trade report to reflect correct price, and uses a brand new Compliance ID or FINRA Control Number | NA | In its new Trade report to the FINRA Facility, Broker 1 populates the Compliance ID or FINRA Control Number = TRF456, which will link it to the new MEOT event submitted to CAT. |
| 5 | Broker 1 reports a new MEOT to reflect price 12.49. | Broker 1 reports a Trade event actionType: NEW firmROEID: 20180417_ M12370 CATReporterIMID: BRK1 type: MEOT tradeKeyDate: 20180417T000000 tradeID: TXYZ555 symbol: XYZ eventTimestamp: 20180417T153036.834456 manualFlag: false cancelFlag: false cancelTimestamp: quantity: 1000 price: 12.49 capacity: P tapeTradeID: TRF456 marketCenterID: DN sideDetailsInd: NA buyDetails: orderKeyDate: 20180417T000000 orderID: O11111 side: B sellDetails: side: SL firmDesignatedID: PROP123 accountHolderType: P | In its new Trade event, Broker 1 must populate the <i>tapeTradeID</i> field linking to the newly reported trade report with correct price of 12.49. The <i>cancelFlag</i> must be populated as 'false'. |

9.1.5. Trade is Incorrectly Reported to both CAT and to the Trade Reporting Facility

This scenario illustrates the CAT reporting requirements when an Industry Member incorrectly reports a trade to both CAT and a trade reporting facility. The Industry Member corrects its MEOT event in CAT, and the Industry Member submits a new trade report to the relevant trade reporting facility and uses a new Compliance ID or FINRA Control Number.

In this scenario, an Industry Member executes a trade for 1,000 shares and incorrectly reports both the MEOT event to CAT and the trade report to a trade reporting facility for 100 shares. The Industry Member corrects the MEOT event in CAT from 100 shares to 1,000 shares using a 'COR' event. The Industry Member submits a new trade report from 100 shares to 1,000 shares using a new Compliance ID or FINRA Control Number.

Industry Member Broker 1 is required to report:

- The receipt of the customer order (New Order event)
- The execution of the customer order (original Trade event linking to original TRF report and corrected Trade event linking to the new TRF report)

In this scenario, since a new Compliance ID or FINRA Control Number was used, the Industry Member is required to report to CAT a corrected MEOT event linking the new trade report. If a new Compliance ID or FINRA Control Number was not used, the corrected MEOT event would link to the original trade report by reference to the updated trade report which used the same Compliance ID or FINRA Control Number.
