# CAT Reporting Technical Specifications for Plan Participants 

4/15/2024

Version 4.1.0-r21

## Table of Contents

Executive Summary ..... 1

1. Introduction ..... 6
1.1. CAT Overview ..... 6
1.2. Change Release Management Process ..... 7
1.3. CAT Identifiers ..... 7
1.3.1. CAT Reporter ID ..... 7
1.3.2. Participant ID ..... 8
1.3.3. Exchange ID ..... 8
1.3.4. Member Alias ..... 8
1.4. Fundamental Data Types ..... 9
1.4.1. Data Validation ..... 12
1.4.2. Name Value Pairs ..... 12
2. Reference Data ..... 13
2.1. Member Information ..... 13
2.1.1. Member Dictionary Entry ..... 14
2.1.2. Member Alias Detail Entry ..... 15
2.2. Equity Symbols ..... 16
2.2.1. CAT Symbol Master ..... 16
2.3. Corporate Actions ..... 17
2.4. Options Dictionary ..... 17
2.4.1. Option Series Dictionary Entry ..... 18
2.4.2. Option Symbol Changes ..... 19
2.4.3. Complex Option Dictionary Entry ..... 25
2.5. Market Maker Information ..... 27
3. Special Data Elements and Common Events ..... 30
3.1. Timestamps and Sequence Numbers ..... 30
3.1.1. Sequence Number Subsystems ..... 30
3.1.2. Time of Order Receipt ..... 31
3.2. Symbology ..... 31
3.3. NBBO ..... 31
3.4. Order Linkage and Lifecycle ..... 31
3.5. Material Terms of an Order ..... 33
3.5.1. Order Types ..... 34
3.5.2. Order Handling Instructions ..... 34
3.6. Optional, Required, and Conditional Fields ..... 35
3.7. Common Events ..... 36
3.7.1. Note Event ..... 36
3.7.2. Self-Help Declarations ..... 38
3.7.3. Supplemental Trade Event ..... 39
3.7.4. Reject Message Event ..... 41
4. Events for Stock Exchanges ..... 45
4.1. Order Accepted Event ..... 46
4.2. Order Route Event ..... 48
4.3. Internal Order Route Event ..... 50
4.4. Order Modified Event ..... 52
4.5. Order Adjusted Event ..... 56
4.6. Order Canceled Event ..... 59
4.7. Order Trade Event ..... 60
4.8. Order Fill Event ..... 63
4.9. Order Cancel Route Event. ..... 64
4.10. Order Modify Route Event ..... 65
4.11. Order Restatement Event ..... 67
4.12. Trade Break Event ..... 69
4.13. Trade Correction Event ..... 70
4.14. Lifecycle Keys ..... 72
5. Events for Options Exchanges ..... 74
5.1. Market Maker Quotes ..... 75
5.1.1. Quote Event ..... 77
5.1.2. Quote Cancel Event ..... 80
5.2. Options Orders ..... 82
5.2.1. Order Accepted Events ..... 82
5.2.2. Order Modified Events ..... 91
5.2.3. Order Canceled Event ..... 108
5.2.4. Routing Orders ..... 110
5.2.5. Trades and Fills ..... 126
5.2.6. Post Trade Allocation Event ..... 131
5.3. Option Order Restatement Event ..... 133
5.4. Option Trade Break Event ..... 136
5.5. Option Trade Correction Event ..... 137
5.6. Option Floor Broker Events ..... 139
5.6.1. Floor Participant Event ..... 140
5.6.2. Complex Floor Participant Event ..... 142
5.6.3. Return to Floor Participant Event ..... 144
5.7. Lifecycle Keys ..... 146
6. FINRA Reporting ..... 150
6.1. TRF/ORF/ADF Transaction Data Event ..... 150
6.2. OTC Halt/Resume Data ..... 159
6.3. Equity Best Bid and Offer Event ..... 160
7. Stock Exchange Event Examples ..... 163
7.1. Order Accepted Event Example ..... 163
7.1.1. JSON Examples ..... 165
7.2. Order Trade Event Example ..... 167
7.2.1. JSON Examples ..... 169
7.3. $\quad$ Order Route and Order Fill Event Example ..... 171
7.3.1. JSON Examples ..... 174
7.4. Order Restatement Example ..... 176
7.4.1. JSON Examples ..... 178
7.5. Order Modified Example ..... 179
7.5.1. JSON Examples ..... 181
7.6. Order Modified for because of Partial Fill at Away Exchange ..... 182
7.6.1. JSON Examples ..... 185
7.7. Order Adjusted Example ..... 186
7.7.1. JSON Examples ..... 188
7.8. Order Adjusted Example Firm Initiated ..... 189
7.8.1. JSON Examples ..... 191
7.9. Order Adjusted Event because of Partial Execution at Away Exchange ..... 192
7.9.1. JSON Examples ..... 195
8. Options Exchange Event Examples ..... 198
8.1. Quote and Quote Cancel Events ..... 198
8.1.1. Two-Sided Quotes Example ..... 198
8.1.2. One-Sided Quotes Example ..... 202
8.2. Option Order Event Examples ..... 205
8.2.1. Simple Option Order Accepted Example ..... 205
8.2.2. Complex Option Order Accepted Event Example ..... 207
8.3. Simple Option Order Modified Event ..... 209
8.3.1. JSON Example ..... 211
8.4. Simple Option Order Modified Event Created As a Result of Partial Execution at Away Exchange ..... 213
8.4.1. JSON Examples ..... 216
8.5. Simple Option Trade Event Examples ..... 218
8.5.1. JSON Examples ..... 220
8.6. Complex Options Trade Events Examples ..... 222
8.6.1. JSON Examples ..... 229
8.7. Complex Option Order Modify Event Example ..... 234
8.7.1. JSON Examples ..... 235
9. Submission Process ..... 237
10. Feedback and Corrections ..... 238
11. Testing ..... 239
12. Additional Information ..... 240
12.1. Public Website ..... 240
12.2. FINRA CAT Help Desk ..... 240
Appendices ..... 241
Appendix A. Clock Synchronization Requirement ..... 242
Appendix B. Error Codes ..... 243
B.1. Data Ingestion Errors ..... 243
B.2. Reference Data Validation Errors ..... 250
B. 3 Linkage Discovery Errors ..... 255
B.4. Error Prefix Definition ..... 260
Appendix C. Placeholder ..... 262
Appendix D. CAT Date Definitions and Reporting Guidelines ..... 263
Appendix E. Placeholder ..... 266
Appendix F. Data Dictionary ..... 267
Appendix G. CATFT (fileX) Token Service Instructions and Examples ..... 428
Appendix H. Plan Processor Best Practices ..... 432
Appendix I. Historical Summary of Document Revisions ..... 433

## Executive Summary

The Consolidated Audit Trail (CAT) tracks orders throughout their lifecycle and identifies the exchanges and broker-dealers handling them. This allows regulators to more efficiently and accurately track activity in eligible securities - those under the jurisdiction of the Securities and Exchange Commission (the "SEC") - throughout the U.S. markets. CAT is created by a joint plan (CAT NMS Plan) of the Plan Participants or simply "Participants."

This document provides Participants with the necessary information to fulfill their reporting obligations to CAT in compliance with SEC Rule 613 and the CAT NMS Plan. It describes the requirements for reporting data to CAT, including detailed information about data elements and file formats of each reportable event. This document also describes how Participants should submit files to CAT, including access instructions, network and transport options, and testing requirements.

This document does not include information related to the provision of data by Industry Members. The CAT Reporting Technical Specifications for Industry Members can be found on the CAT NMS website (www.catnmsplan.com).

Table 1: Summary of Document Revisions
See Appendix I for the Summary of Document Revisions for earlier versions.

| Version | Date | Author | Description |
| :---: | :---: | :---: | :---: |
| 4.1.0-r15 | 7/29/2022 | FINRA CAT | Spec Updates for Reject Message Event (RME): <br> - Added Section 3.7.4 for the new Reject Message Event (RME) <br> - Added Section 10.6.7 for RejectMessageEvents file kind data ingestion feedback <br> - Updated references to file kinds to include the new RejectMessageEvents file kind <br> - Updated Appendix B.1: Data Ingestion Errors to reflect errors applicable to the new RejectMessageEvents file kind <br> - Updated Appendix F: Data Dictionary to add new fields and to reference RME on existing fields as applicable <br> Spec Updates to Support Use of FINRA ADF: <br> - Added Section 6.3 for the new Equity Best Bid and Offer Event (EBBO) <br> - Updated Appendix F: Data Dictionary to add new fields and to reference EBBO on existing fields as applicable |
| 4.1.0-r16 | 11/21/2022 | FINRA CAT | Moved Summary of Document Revision content for Releases 4.1.0-r9 through 4.1.0-r14 to Appendix I (changes not tracked) Updated sentTimestamp on Options Quote (OQ) event from Optional to Conditional; added language to clarify condition under which the field can be omitted |

| Version | Date | Author | Description |
| :---: | :---: | :---: | :---: |
|  |  |  | Updated sentTimestamp on Options Quote Cancel (OQC) event from Optional to Conditional to better reflect description of field Updated Error Codes 7017, 7019, 7021, 7023 to clarify that they are Named Errors <br> Updated description of 'FLOOR' executionCode to clarify that the value optionally may be reported beginning September 29, 2022 and must be reported beginning no later than November 14, 2022 Updated Section 9.8.4 and Appendix $G$ to include information for Disaster Recovery <br> Updated Appendix F: Data Dictionary to: <br> - Add canceIReasons 156-160 and executionCodes>liquidityCode 53-57 for Nasdaq Mercury, ISE, and Gemini <br> - Add cancelReasons for NASDAQ Mercury <br> - Add orderType PrimaryPegAvailWhenLocked and PrimaryPegUnavailWhenLocked for MIAX PEARL Equities <br> - Add executionType Name/Value Pairs SOT and STT for BOX <br> - Updated handlingInstructions > crossType values 31-41 to apply to Mercury <br> The following changes will be effective in the Production Environment on December 5, 2022: <br> - Updated Appendix F: Data Dictionary to add rejectReason codes for BOX, CBOE, IEX, MEMX, MIAX, and NYSE <br> - Updated Appendix B.3: Linkage Discovery errors updated to add Error Codes 6022, 6024, 6026, 6028 to support linkage of (exchange) OT to (Industry Member) MOOT <br> The following changes will be effective in the Production Environment in March 2023: <br> - Added information for new BestBidAndOffer file kind to support the reporting of the EBBO event |
| 4.1.0-r17 | 2/21/2023 | FINRA CAT | Updated Section 3.7.3 Supplemental Trade Event <br> Added an example Reject Message Event in Section 3.7.4 Updated Appendix F: Data Dictionary to: <br> - Add cancelReason for MIAX Pearl Equities <br> - Add handlingInstructions for NYSE Equities (NoRetail) and MIAX and MIAX Emerald (AutoMatchLimit and AutoMatchMarket) <br> - Add orderAttributes > PWASH value of ' $X$ ' for CBOE, ClientID for NYSE <br> - Add orderAttributes > AIQ value of 'b', 'd', 'n', 'o', 'w', 'y' and clarifying descriptors for NASDAQ Equities <br> - Add/remove rejectReason values for CBOE, LTSE, MEMX, NASDAQ Equities, and NYSE <br> - Add executionCodes/orderAttributes for BOX (FLEX) |
| 4.1.0-r18 | 4/17/2023 | FINRA CAT | Updated Summary of Document Revisions for version 4.1.0-r17 to include the date of publication <br> Updated Tables 63, 101, and 102 to include Equity Best Bid and Offer (EBBO): <br> - Table 63: replaced \#2 from 'exchange' to 'marketCenterld' data type and description |

| Version | Date | Author | Description |
| :---: | :---: | :---: | :---: |
|  |  |  | - Table 101: added 'Display-Only Facility' to heading; \#1-6, and 8 added 'Order Accepted’ and 'Equity Best Bid and Offer' <br> - Table 102: \#1-6 added 'Equity Best Bid and Offer' <br> Updated Appendix F: Data Dictionary to: <br> - Add handlingInstructions > CxIPxBack value of ' N ', ' C ', ' U ' <br> - Add marketCenterld > ADF for EBBO events; updated description of ' $D$ ' to 'ADF-TRF' <br> - Add orderAttributes > OverrideAIQDLO boolean value for IEX <br> - Add orderAttributes > orgID name/value and PriorityUpdate boolean value for Nasdaq Equities <br> - Add rejectReason for NYSE American Options <br> - Add rejectReason for Nasdaq Options <br> - Add originalAskQuoteID description |
| 4.1.0-r19 | 7/18/2023 | FINRA CAT | Updated Summary of Document Revisions for version 4.1.0-r18 to include the date of publication; made minor formatting changes for consistency <br> Clarified submission requirements: <br> - Section 9.1.1, Table 79: File Kinds: added 'Record Type' <br> - Section 10.9 Corrections, Deletions, and Replacements: clarified correction records; added 'Correction Submission Schedule' table; updated section title; removed list of events in the first sentence; added cross-reference to section 10.8.1 <br> - Section 10.9.1.1 Delete Records: removed outdated footnote (16) <br> - Section 10.9.2 File Replacement: clarified late file submission and number of replacements; added crossreference to section 10.8.1 <br> Updated Appendix F: Data Dictionary to: <br> - Add handlingInstructions > SigVersion value of 'SignalV5" and "SignalV6" for IEX <br> - Add orderAttributes > FloorOrderID value for Cboe (C1) <br> - Add and Update rejectReason for MIAX Options, MIAX Pearl Options, and MIAX Emerald Options <br> - Add rejectReason for Nasdaq Options |
| 4.1.0-r20 | 9/25/2023 | FINRA CAT | Added initiator field to section 5.1.1, Table 32: Quote Events Updated Appendix F: Data Dictionary to: <br> Onboard MEMXOP: <br> - Add Participant ID > Members Options Exchange value of 'MEMXOP' <br> - Add handlingInstructions > Price Adjustment value of 'PA' <br> - Add orderAttributes > values of 'PAF', 'PAB', 'MTP' <br> - Add cancelReason > values of ' 0 - 19’ <br> - Add exchOriginCode > values of '1-7' <br> - Add rejectReason > various values in the range of '1001 3019' <br> Other Updates: <br> - Add initiator > Event(s) description 'Option Quote Event' <br> - Add rejectReason > 'PEARLEQ_ORR_0078' for MIAX Pearl Equities <br> - Update rejectReason > 'PEARLEQ_ORR_0019' for MIAX Pearl Equities |

| Version | Date | Author | Description |
| :---: | :---: | :---: | :---: |
|  |  |  | - Add canceIReason > 'PEARLEQ_0126' for MIAX Pearl Equities <br> - Add handlingInstructions > '27 MEMXOP' to DestExch value for Nasdaq Options <br> - Update orderType > 'FMPEG' for IEX <br> - Add canceIReason > 'EMLD_0065' for MIAX Emerald Options <br> - Update orderAttributes > REJA value of 'x' description for Cboe |
| 4.1.0-r21 | 4/15/2024 | FINRA CAT | - Updated Appendix F: Data Dictionary to:Add cancelReason > 'MIAMI_0065' for MIAX Options <br> - Add cancelReason > 'PEARL_0039’ for MIAX Pearl Equities <br> - Add canceIReason > '21' for MEMX <br> - Add cancelReason > '85-88' for PHLX and NOM Options <br> - Add cancelReason > '161-164' for ISE and GEMX Options <br> - Add cancelReason > '1521-1523' for MRX and NOM Options <br> - Add canceIReason > 'PostOnlyCancelled' for IEX <br> - Add cancelReason > '1017, 1018, 1020-1155 1019, 1156-1513' for GEMX Options <br> - Add definedNoteData > 'AucPrc, DMM' for NYSE Equities <br> - Added FINRA CAT standard executionCodes and orderAttributes > 'PCTPX' <br> - Added executionCodes > 'Y, W' for IEX <br> - Add handlingInstructions > 'Dest Exch' value of '28' for Nasdaq Options <br> - Add handlingInstructions > 'RoutingInst' value of ' $0,1,2$ ' for IEX <br> - Add handlingInstructions > 'ExecBroker' value of 'CUSTOM-RFTY and LSTY' for NSDQ <br> - Add handlingInstructions > 'CrossType' value of '42' for NOBO, MRX, GEMX Options <br> - Remove handlingInstructions > 'NoRetail' for NYSE Options <br> - Add noteType > 'AOCNoParticipation, AOCNoParticipationRej' for NYSE Equities <br> - Added orderAttributes > 'REJA' values of ' $w$ and Q' for Cboe Options <br> - Added orderAttributes > 'CancelOrSlide' values of '0, 3 ' for IEX <br> - Add rejectReason > '117-120' for PHLX and NOM Options <br> - Add rejectReason > '569-572' for ISE and GEMX Options <br> - Add rejectReason > '1521-1523' for MERX and NOBO Options <br> - Add rejectReason > '311-325, 326, 327, 906, 330, 331' for NYSE Equities <br> - Add rejectReason > '328, 329, 330' for AMEROP Options <br> - Add rejectReason > '329' for ARCAOP Options <br> - Add rejectReason > '1-16, 1017-1520, Other' for GEMX Options <br> - Add rejectReason > 'InvalidTagCombinationForPostOnlyOrder', 'InvalidOddLot' and 'InvalidTradeNowInstruction' for IEX <br> - Add rejectReason > 'PEARLEQ_MRR_0052 and 'PEARLEQ_MRR_0053' for MIAX Pearl Options |

| Version | Date | Author | Description |
| :--- | :--- | :--- | :--- |
|  |  |  | • Aligned rejectReason and orderAttributes for NYSE <br> Options to support Pillar platform transition |

## 1. Introduction

### 1.1. CAT Overview

The Securities and Exchange Commission (SEC) approved Rule 613 under the Securities Exchange Act of 1934, which requires national securities exchanges and national securities associations (collectively, the Participants) to submit a national market system plan to create, implement, and maintain a consolidated audit trail (CAT NMS Plan) that would capture customer and order event information for orders in NMS Securities and OTC Equity Securities (Eligible Securities), across all markets, from the time of order inception through routing, cancellation, modification, execution, and allocation. The SEC approved the CAT NMS Plan on November 15, 2016.

In accordance with SEC Rule 613, the CAT NMS Plan requires a Central Repository that will comprehensively track orders throughout their lifecycle and identify the Participants and Industry Members handling them, as well as the account holders and authorized traders for any account that originates an order (Customers ${ }^{1}$ ). Specific data elements will be submitted to the Central Repository by Participants, Industry Members, and CAT Reporting Agents. CAT Reporting Agents may be third-party firms reporting on behalf of other entities, or may be outside parties that are not required to submit data to the CAT, but from which the CAT may receive data per the CAT NMS Plan, such as the Securities Information Processors (SIPs).

The CAT NMS Plan also requires the selection of an entity as the Plan Processor to be responsible for performing the processing functions required by Rule 613 and the Plan. The Operating Committee of Consolidated Audit Trail, LLC, a governing body composed of representatives of the Participants, oversees the operation of the CAT. The duties of the Operating Committee are further described in Article IV of the CAT NMS Plan.

Refer to SEC Rule 613, available at: https://www.sec.gov/rules/final/2012/34-67457.pdf for more details. Refer also to CAT NMS Plan, available at: https://www.catnmsplan.com/wp-content/uploads/2018/02/34-79318-exhibit-a.pdf.

[^0]
### 1.2. Change Release Management Process

Changes to this technical specification will be released as follows:

- Prior to the go-live date for system changes
- A new specification will be posted to the CAT Public Website
- A notice will be posted on the website with a summary of changes and links to relevant information.
- One or more email alerts will be sent to plan participants with a summary of changes and links to relevant information.
- In some cases, CAT may accept production reporting using the new specification in advance of the go-live date.
- Plan Participants that have not conducted testing or production reporting using the new technical specification format will receive support from CAT as the go-live date approaches.
- The new technical specification will include a summary list of changes as well as a table listing the specific areas of the document where the changes have been made.

### 1.3. CAT Identifiers

CAT uses a number of identifiers, many of which readily convey their meaning from the context in which they are used. The subsections below include terms associated with the entities that will report data into CAT and their respective roles. As shown in the diagram below, Exchange ID is a subset of Participant ID, which is a subset of Reporter ID.

Figure 1: CAT Identifier Hierarchy

### 1.3.1.CAT Reporter ID

Each entity which reports into CAT will be assigned a unique identifier: a CAT Reporter ID. This ID will uniquely identify each reporter, including plan participants, industry members, and associated reporting facilities. The database of CAT Reporter IDs will be made available both as a downloadable file on the CAT website and through the web portal API.

### 1.3.2.Participant ID

The Participant ID is an ID assigned by CAT to each plan participant. The value will be the same as the participant's CAT Reporter ID.

### 1.3.3.Exchange ID

The Exchange ID is an ID assigned by CAT to each stock/options exchange. The actual value will be the same as the exchange Participant ID and Reporter ID, but, as indicated in Figure 1, Exchange ID is a subset of Participant ID, which is a subset of Reporter ID.

### 1.3.4.Member Alias

Each SRO will assign unique IDs to its industry members. These IDs are aliases for CAT reporters so that reporting firms can use existing identifiers when reporting market events to CAT. It is important that both the member and SRO are aware of the assigned IDs and when they should be used in reports to CAT.

Each SRO has autonomy in assigning their IDs. Note that the same ID could possibly be assigned to different industry members across SROs. Furthermore, a member may have multiple aliases assigned to them by the same SRO. Thus, the alias is only valid in combination with the SRO that assigned the ID. Specifically, when an exchange receives a routed order from one of its members, both the routing member and the exchange must report the same Member Alias in their reports to CAT in order to properly link the reports to the same order lifecycle.

An industry member can have the same alias value assigned by multiple SROs. Note that an alias is used in conjunction with an identifier that links the alias with the SRO that assigned the alias (either by explicit designation, or implicitly by context).

For example, consider three firms (Firm A, Firm B, and Firm C) and three SRO participants (Participant A, Participant B, and Participant C), and the following table of SRO-assigned member IDs.

Table 2: Example of SRO-assigned Member IDs

| FIRM | Participant A | Participant B | Participant C |
| :--- | :--- | :--- | :--- |
| Firm A | FRMA | AAAA | FRMA |
| Firm B | FRMB |  | BBBB |
| Firm C | FRMC | CCCC | FRMB |

Note that Member Alias FRMA is assigned to Firm A by both Participant A and Participant C, and Member Alias FRMB is assigned to two different firms by two different participants. While the same alias is used multiple times, these are valid mappings because the same alias is not assigned multiple times within a participant. Also note that Firm B is not a member of Participant B, and so there is no corresponding mapping.

Thus, each firm will have at least one alias for each SRO in which they have membership. The value may or may not be the same across all participants. When Participant A refers to Firm C, it will use the alias FRMC. Likewise, when Firm C refers to itself in relation to Participant $A$, it will use the alias FRMC.

Note that industry members can have multiple Member Aliases, but they will also be assigned a unique CAT Reporter ID. CAT maps the SRO-assigned Member Alias values to ensure the same unique CAT Reporter ID assigned to the member firm across SRO's. Note that member dictionary entries apply to data uploaded for the same business date as the member dictionary itself (values do not have to be the same from day to day).

### 1.4. Fundamental Data Types

The fundamental data types used in this document are described below. A complete list of data types is presented in Appendix F. Data Dictionary.

CAT will accept two kinds of text-based files: JSON and CSV. To support both JSON and CSV submissions, CAT will publish a JSON schema file which describes each data type with required representation formats, and a mapping that defines the position in a CSV representation that the data element would assume.

A schema will be provided for each data object that can be reported in both JSON and CSV.
When a data field is marked as either optional or conditional, some records may not provide values for that field. In such a case, the field is simply not reported as part of the JSON record. In a CSV record, it is reported as an empty column. ${ }^{2}$

[^1]Table 3: Data Type Descriptions

| Data Type | JSON Type | Description |
| :---: | :---: | :---: |
| Alphanumeric | STRING | A string, composed only of letters and digits [a-zA-Z0-9]. <br> When an Alphanumeric type is described, it will include a number, indicating the maximum length of the field. For example, Alphanumeric(7) means that the field can contain up to 7 characters |
| Array of XXX | ARRAY | When represented in JSON, it is an array of the indicated type (XXX is a placeholder). So, Array of Unsigned would be an array of unsigned integers, and would be represented as [ 0,42 ]. <br> When represented in CSV, it is a series of the indicated type, separated by the pipe symbol. So, the aforementioned array of Unsigned would be represented as $0 \mid 42$. |
| Boolean | BOOLEAN | A value with only two choices: true or false |
| Choice | STRING | A Text field, but with an explicit list of acceptable values. |
| Date | NUMBER | An 8-digit integer representing the date in YYYYMMDD. |
| Exchange ID | STRING | A subclass of Participant ID that only applies to exchanges (all participants except FINRA) |
| Integer | NUMBER | An integer value (positive, negative, or zero), with no decimal fraction component, in the inclusive range from -9,223,372,036, $854,775,808$ to $9,223,372,036,854,775,807$ (the same range as a 64-bit signed integer) |
| Member Alias | STRING | Text(8) - one of the aliases assigned by an SRO to one of its members |
| Message Type | STRING | An Alphanumeric(5) field, indicating the type of message being reported |
| Name Value Pairs | STRING JSON Object | A value of type Text (except the pipe is allowed), composed as described in the Name Value Pairs section below |
| Numeric | NUMBER | A general numeric type, composed of digits, an optional decimal point, followed by more digits (with an optional leading +/- sign). These values, while looking like floating point numbers, should always be read and processed in a way that represents the exact value as represented by the text. Examples: 1235, -1235, 1235.67, -1235.67 <br> When a numeric type is described in this document, it will include two numbers, the first is the maximum number of digits before the decimal point, and the second is the maximum number of digits after the decimal point. <br> For example, Numeric $(6,4)$ means that the number can have up to 6 digits before the decimal point and up to 4 digits after the decimal point (visual format would be \#\#\#\#\#\#.\#\#\#\#). Note that these are maximum limits - the lengths can be smaller. Valid examples which comply with Numeric $(6,4)$ would be -999999.9999, -0.1, 0, 0.0001, and 999999.99. <br> All numeric values must have a whole number portion before the decimal point (e.g., 0.25 can't be represented as .25 ). The fractional portion is optional. <br> Do not use leading zeros in numeric values. A zero should only appear as the first digit if it is the only digit before the decimal point (e.g., 0.75) |

| Data Type | JSON Type | Description |
| :---: | :---: | :---: |
| Participant ID | STRING | A subclass of Reporter ID that applies only to participants |
| Price | NUMBER | A Price is shorthand for Numeric( 10,8 ), which can support prices in the inclusive range [-9999999999.999999999, 9999999999.99999999] |
| Reporter ID | STRING | Alphanumeric(7) - a CAT Reporter ID |
| Symbol | STRING | Text (20) |
| Symbol Alias | STRING | Text (20) - an alias that can be assigned to a symbol |
| Text | STRING | A string, composed of any printable character, except comma (ASCII decimal 44, hex 2C), pipe (ASCII decimal 124, hex 7C), and double quote (ASCII decimal 34, hex 22). <br> When a Text type is described, it will include a number, indicating the maximum length of the field. For example, $\operatorname{Text}(7)$ means that the field can contain up to 7 characters. |
| Time | NUMBER | A numeric field, with a specific format conforming to what the ISO 8601 standard calls the basic format, with a few extra specifications. <br> All 24-hour time components are mandatory (i.e., hour, minute, and second as HHMMSS). The decimal-fraction part must be separated from the whole part with a period (ASCII decimal 46, hex 2E), and can contain up to 9 digits (to represent nanosecond component). <br> The time zone is always Eastern Time. <br> For example, 09:30:00.123456789 would be reported as 093000.123456789. |
| Timestamp | STRING NUMBER | A timestamp represents a moment in time, and contains both Date and Time, separated by the letter T (ASCII decimal 84, hex 54) or a space (ASCII decimal 32, hex 20). All time must be in Eastern Time. For example, January 7, 2017 21:30:00.123456789 in New York would be represented as the string 20170107T213000.123456789. <br> As an alternative format, the timestamp can be submitted as a value of type Unsigned, representing the number of nanoseconds that have elapsed since 00:00:00 Coordinated Universal Time (UTC), Thursday, 1 January 1970, not counting leap seconds. This is also commonly known as POSIX time or UNIX time. The same point in time from the above example would be represented as the number 1483842600123456789. <br> Note that the data type is different between the two formats. In JSON, the first representation requires it to be surrounded by double quotes, while the second does not |
| Unsigned | NUMBER | An unsigned value, greater than or equal to zero, with no decimal fraction component, in the inclusive range from 0 to 18,446,744,073,709,551,615 (the same range as a 64-bit unsigned integer) |

### 1.4.1.Data Validation

All data submitted to CAT will be validated based on the defined data type of each item, including proper formatting and range checking. All File Names, Field Names, and Field Values are case sensitive. During validations, if the case does not match, an error will occur. Examples of accepted values are detailed in the table above. Valid values for Choice fields are defined in the Data Dictionary for each data element. Valid data values, ranges, and formats will be specified in the record schema files, which will be used to validate submitted data element values. Records and values which fail validation will be marked as a failure and will be reported as feedback to the Submitting Member as detailed in Section 10.

### 1.4.2.Name Value Pairs

Some fields are described as containing name/value pairs. Name Value Pairs is a list of zero or more attributes, where each attribute is either a name with no value, or a name with an accompanying value such that the name and value are separated by a single equal sign (ASCII decimal 61, hex 3D). Multiple attributes are separated by the pipe symbol (ASCII decimal 124, hex 7C). If an attribute is Boolean in nature, it can optionally be represented as a name alone, where its value is implied by its presence (true) or absence (false).

The name part is the string up to the first pipe symbol or equal sign. Names must not contain commas (ASCII 44, hex 2C), pipes, equal-signs, or double-quotes (ASCII decimal 34, hex 22).

If the name terminates with a pipe, it is a Boolean value, and its presence indicates true. If the name terminates with an equal sign, the value must follow.

The value part is the string starting with the character just after the equal sign, up to either a pipe symbol or the end of the string. Values may contain an equal sign, but must not contain commas, pipes or double-quotes.

In some cases, the names are free-format (i.e., undefined). Both the name and any value are left up to the discretion of the reporter and the contents are not validated by CAT.

For example, the following JSON represents a hypothetical name/value pair field, with a Boolean attribute and a price attribute: \{ "data": "XYZ|ABC=12.55" \}

The above format works for both JSON and CSV data entry. However, when submitting data in JSON, a more native JSON style can optionally be used by assigning a JSON object as the value for a Name Value Pair attribute. Note, however, that Boolean values must be explicitly set. The above example can alternatively be submitted as: \{ "data": \{ "XYZ": true, "ABC": 12.55 \} \}

## 2. Reference Data

This section describes the reference or supplemental data required to be reported by each participant.

### 2.1. Member Information

Each SRO must submit to CAT a directory of information that lists each industry member with which it has a reporting relationship. Each dictionary entry identifies a specific industry member, and assigns one or more IDs to that member. These IDs may be used by the SRO and/or the member when reporting order events to CAT. The industry members listed in the dictionary will also be participant members of the SRO, although this is not always the case. For example, each industry member that submits an order to an exchange must be a registered member of that exchange. However, the exchange may route orders to an industry member that is not a member of that exchange. In either case, the exchange must give at least one Member Alias to each industry member that appears in any of the order events reported to CAT.

Each member may have multiple aliases, but a specific Member Alias may only be assigned once per SRO. Note that the member dictionary is loaded each day, and the values only apply to that trading day. Thus, Member Aliases could be reassigned on subsequent trading days.

The Member Dictionary will be uploaded as a file of newline-delimited JSON objects, one object per member entry. The member dictionary is necessary to process other file uploads, and must be uploaded to CAT no later than T+1 at 4:00 a.m. ET, with entries sufficient to support all reports submitted on that trading day. Note that this is a same-day upload requirement whereas order events are required to be reported by 8:00 a.m. ET the following trading day.

CAT must be able to identify each IMID that operates as an ATS and must know the name under which the ATS operates. The Member Dictionary Entry does not support the provision of this information. When reporting a Member Dictionary Entry (MDE) that includes an ATS, a corresponding Member Alias Detail Entry (MADE) must also be submitted. Additionally, when reporting a Member Dictionary Entry (MDE) where the status is 'Other', a Member Alias Detail Entry (MADE) must also be submitted to provide the entity name. Note that, while any participant can submit a MADE record, it is intended for use only by participants that report ATSs to CAT, such as FINRA.

### 2.1.1.Member Dictionary Entry

Table 4: Member Dictionary Entry

## Member Dictionary Entry (MDE)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message Type | MDE | $R$ |
| 2 | reporter | Reporter ID | The unique identifier assigned to the reporter by CAT | $R$ |
| 3 | ID | Text (20) | The CRD number of the firm, if the status field directly <br> below is set to Active, Inactive, or NonMember. <br> Otherwise (Internal, Other), this must be an ID for the <br> entity generated by the reporter. | R |
| 4 | status | Choice | The status of the member for the reporting date. <br> If the status is 'Other', a corresponding MADE record <br> must be reported for each member alias. <br> See Data Dictionary: status | R |
| 5 | memberAliases | Array of <br> Member Alias | A list of Member Alias values for the member, as <br> assigned by this SRO, for use in association with this <br> SRO. <br> A corresponding MADE record must be reported for <br> each member alias representing an ATS. | R |

The following example shows a potential member dictionary for exchange Exch1 where the first entry represents an industry member that is also a member of the reporting SRO, the second entry represents an industry member that is not a member of the reporting SRO, and the third entry represents the SRO itself, with various facilities that have been given Member Alias values.

```
{
    "type": "MDE",
    "reporter": "Exch1",
    "ID": "1234567",
    "status": "Active",
    "memberAliases": [ "FRMA", "FRMA1", "FRMA:U01", "FRMA:U02" ]
}
{
    "type": "MDE",
    "reporter": "Exch1",
    "ID": "7654321",
    "status": "NonMember",
    "memberAliases": [ "FRMB" ]
}
{
    "type": "MDE",
    "reporter": "Exch1",
    "ID": "123xyz",
```

```
    "status": "Internal",
    "memberAliases": [ "XXX" ]
}
{
    "type": "MDE",
    "reporter": "Exch1",
    "ID": "123abc",
    "status": "Internal",
    "memberAliases": [ "ZZZ" ]
}
```

The next example shows a potential member dictionary for exchange Exch2. Note how the same entities are members of both Exch1 and Exch2, but they may or may not have different Member Alias values with each SRO.

```
{
    "type": "MDE",
    "reporter": "Exch2",
    "ID": "1234567",
    "memberAliases": [ "FRMZ", "FRMZ:U01", "FRMZ:U02" ],
    "status": "Active"
}
{
    "type": "MDE",
    "reporter": "Exch2",
    "ID": "7654321",
    "memberAliases": [ "FRMB" ],
    "status": "Active"
}
```

### 2.1.2.Member Alias Detail Entry

Table 5: Member Alias Detail Entry

Member Alias Detail Entry (MADE)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message Type | MADE | R |
| 2 | reporter | Reporter ID | The unique identifier assigned to the reporter by CAT. | R |
| 3 | ID | Text (20) | The CRD number of the firm for which the entry is <br> being provided, or the ID for the entity generated by <br> the reporter. Must also appear in an MDE event. | R |
| 4 | memberAlias | Member Alias | Member Alias of the member for the MADE <br> submission. Must also appear in an MDE event for the <br> corresponding ID. | R |
| 5 | ats | Boolean | Indicates that the memberAlias is an ATS. | C |
| 6 | name | Text (128) | The doing-business-as (DBA) name of the ATS; <br> required when ats is true. OR The name of the entity; | R |

| Member Alias Detail Entry (MADE) |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |  |  |  |
|  |  |  | required when the status of the corresponding MDE is <br> 'Other'. |  |  |  |  |

The following example shows a member dictionary for exchange Exch2 where one of the aliases represents an ATS. Note that the ID and memberAlias in the MADE record matches the data provided in the MDE record.

```
{
    "type": "MDE",
    "reporter": "Exch2",
    "ID": "7654321",
    "status": "Active"
    "memberAliases": [ "ATSA", "FRMA", "FRMA1", "FRMA:U01", "FRMA:U02" ]
}
{
    "type": "MADE",
    "reporter": "Exch2",
    "ID": "7654321",
    "memberAlias": "ATSA",
    "ats": true
    "name": "ATS Alpha"
}
```

### 2.2. Equity Symbols

FINRA CAT maintains a symbol master for CAT reportable equity securities. ${ }^{3}$

### 2.2.1.CAT Symbol Master

The CAT Equity Securities Symbol Master is published on the CAT NMS website at https://www.catnmsplan.com/reference-data, for use by Industry Members in reporting. FINRA CAT publishes a Start-of-Day (SOD) file by 6:00 a.m. ET daily, an End of Day (EOD) file by 6:00 p.m. ET, and intraday updates approximately every two hours during the business day. Information including file descriptions, file layouts, and retrieval instructions can also be found on that page. Additionally, the data is available to the Plan Participants via the CAT Query Tools.

[^2]
### 2.3. Corporate Actions

FINRA CAT provides details for equity corporate actions impacting equities ${ }^{4}$ and options ${ }^{5}$.

### 2.4. Options Dictionary

Naming conventions for options can vary among exchanges and trading firms. To reduce confusion and simplify reporting, CAT allows reporters to submit options reports using a unique ID of type Text(40), as defined by the reporter, for each option. However, each reporter must upload a dictionary every day for which it reports option quote/order events. The dictionary is valid only for events reported on the same business day.

The options dictionary shall include simple option entries and complex option entries, to cover all options utilized in any report submitted to CAT by that reporter on a given date. This file is composed of a series of dictionary entries for each option, with the Option ID that will be used by the reporter for all option reports done on that day.

Each Option ID defined in the dictionary must be unique for that reporter on that day, across all simple and complex options. As for reportable order events, Options Dictionary entries can be uploaded throughout the day. When uploaded files are processed, option dictionary files are processed before any order event files for the same uploaded timeframe. Entries can be added dynamically throughout the day.

Note that this is not the product definition, but a universal way to reference an options product for the purposes of reporting order events to CAT.

While the Options Dictionary is necessary to process plan participant data, the Processor uses Options Clearing Corporation (OCC) files to generate the Start of Day and End of Day Options Symbol Master files available to support reporting by Industry Members. In the event an exchange supports options products that are not available in the OCC data set (e.g., FLEXPCT products), CAT requests that the exchange submit those products to CAT by 6:00 p.m. ET on T+0, for inclusion in the End of Day Options files for industry member reporting.

The options dictionary is uploaded as a file of newline delimited JSON objects.

[^3]
### 2.4.1.Option Series Dictionary Entry

The dictionary mapping for an option series (i.e., flex or simple) will contain the information provided in Table 6: Simple Option Series Dictionary Entry, which allows options events to be reported using the Option ID reported in the dictionary entry.

Table 6: Simple Option Series Dictionary Entry

Simple Option Series Dictionary Entry (OSDE)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 1 | type | Message Type | OSDE | R |
| 2 | reporter | Reporter ID | The unique identifier assigned to the reporter by CAT | R |
| 3 | optionID | Text (40) | The unique ID assigned to this option by this reporter. No other simple/complex/flex option should receive the same ID. All reports from this reporter will use this ID to reference a particular option product | R |
| 4 | kind | Choice | Specifies if an option is a simple, complex, flex, or percentage denominated flex option. For the value FLEXPCT, the strike price and order prices of the option are in percentages. <br> See Data Dictionary: kind | R |
| 5 | optionsSymbol | Text (14) | The option class or symbol for the series (as known by OCC) | R |
| 6 | primaryDeliverable | Symbol | The symbol for the primary deliverable component of the option, provided in the symbology of the listing exchange or a valid alias. | R |
| 7 | underlyingType | Choice | This field specifies whether a simple option series has an equity or index as its underlying. The underlying type mapping is consistent with the same mapping used at OCC (e.g., ETF is treated as Equity and WCO is treated as Index). <br> See Data Dictionary: underlyingType | R |
| 8 | expirationDate | Date | The date that the contract will expire | R |
| 9 | strikePrice | Numeric ( 10,8 ) | The dollar and decimal value of the strike price. If option kind = FLEXPCT, this will be the percentage | R |
| 10 | putCall | Choice | Specifies if this simple option or option leg is a put or call. <br> See Data Dictionary: putCall | R |
| 11 | exerciseStyle | Choice | Specifies the exercise style of the Option Series See Data Dictionary: <br> exerciseStyle | R |

Simple Option Series Dictionary Entry (OSDE)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 12 | settlement | Choice | Specifies the settlement of the option <br> See Data Dictionary: settlement | R |
| 13 | testSeriesFlag | Boolean | Indicates that the entry represents a test symbol. <br> Events submitted for a test symbol are excluded from <br> linkage processing. | C |

For example, the following dictionary entry would be for the January 19, 2018 150.0 Put for BRK class B. Note that the primary deliverable is reported in NYSE symbology because BRK.B is listed on NYSE.

```
{
    "type": "OSDE",
    "reporter": "MYID",
    "optionID": "12345",
    "kind": "Standard",
    "optionsSymbol": "BRKB",
    "primaryDeliverable": "BRK.B",
    "underlyingType": "Equity",
    "expirationDate": 20180119,
    "strikePrice": 150.00,
    "putCall": "Put",
    "exerciseStyle": "American",
    "settlement": "PM"
}
```

### 2.4.2.Option Symbol Changes

Changes to symbols stemming from corporate actions can be handled by reporters using Dictionary Entries. Each options exchange should ensure that on the effective date for a corporate action, its Dictionary Entries accurately reflect option symbols with the appropriate numerical suffix when applicable, and it includes any new option symbols created as the result of the corporate action. A detailed corporate action example follows:

Stock ABCD undergoes a 2 for 1 stock split on June 1, 2018. All strike prices are halved, the deliverable remains 100 and the symbol is unchanged. On August 1, 2018 stock ABCD spins off company EFGH, 10 shares per 100 ABCD owned. On the market opening at ex-date all open interest in ABCD corp. is moved to symbol ABCD1 delivering 100 shares of $A B C D$ and 10 shares of EFGH. Option symbol ABCD1 $=100$ ABCD +10 EFGH. Subsequently, ABCD and EFGH shares are each listed in the underlying cash market and their prices are used in the valuation of options ABCD1 respectively. The options exchanges list new option contracts for each underlying that deliver 100 shares using symbols ABCD and EFGH (assuming listing
criteria is met). Options symbols ABCD and EFGH begin trading (independently) and each delivers 100 shares of the corresponding stock upon exercise. On November 1, 2018 ABCD undergoes a 3 for 2 stock split. Option contracts in ABCD and ABCD1 are affected. Contracts in ABCD become ABCD2 delivering 150 shares of underlying stock ABCD. Option symbol $A B C D 2=150$ ABCD. Contracts in ABCD1 remain $A B C D 1$ and deliver 150 shares $A B C D$ and 10 shares EFGH. Option symbol ABCD1 = 150 ABCD + 10 EFGH. The exchange will again list a new $A B C D$ delivering 100 shares of $A B C D$ stock upon exercise.

Considering the example above, the two entries below demonstrate the values before and after the first corporate action event:

Stock ABCD undergoes a 2 for 1 stock split on June 1, 2018. All strike prices are halved, the deliverable remains 100 and the symbol is unchanged.

Before 2:1 Stock Split on June 1, 2018

```
"type": "OSDE",
"reporter": "MYID",
"optionID": "4322",
"kind": "Standard",
"optionsSymbol": "ABCD",
"primaryDeliverable": "ABCD",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 45.00,
"putCall": "Call",
"exerciseStyle": "American",
"settlement": "PM"
}
```

After 2:1 Stock Split on June 1, 2018
\{
"type": "OSDE",
"reporter": "MYID",
"optionID": "4322",
"kind": "Standard",
"optionsSymbol": "ABCD",
"primaryDeliverable": "ABCD",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 22.50,
"putCall": "Call",
"exerciseStyle": "American",
"settlement": "PM"
\}

The next entries demonstrate the impact of the second corporate action event - the spinoff on August 1, 2018.

On August 1, 2018 stock ABCD spins off company EFGH, 10 shares per 100 ABCD owned. On the market opening at ex-date all open interest in ABCD corp. is moved to symbol ABCD1 delivering 100 shares of $A B C D$ and 10 shares of EFGH. Option symbol ABCD1 $=100 A B C D$ + 10 EFGH. Subsequently, ABCD and EFGH shares are each listed in the underlying cash market and their prices are used in the valuation of options ABCD1 respectively. The options exchanges list new option contracts for each underlying that deliver 100 shares using symbols ABCD and EFGH (assuming listing criteria is met). Options symbols ABCD and EFGH begin trading (independently) and each delivers 100 shares of the corresponding stock upon exercise.

Before Spinoff - Note that at this time, EFGH is still part of ABCD.

```
{
"type": "OSDE",
"reporter": "MYID",
"optionID": "4322",
"kind": "Standard",
"optionsSymbol": "ABCD",
"primaryDeliverable": "ABCD",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 45.00,
"putCall": "Call",
"exerciseStyle": "American",
"settlement": "PM"
}
```

After Spinoff - three Dictionary Entries would now be reported as the result of this corporate action:

```
{
"type": "OSDE",
"reporter": "MYID",
"optionID": "4322",
"kind": "Non-Standard",
"optionsSymbol": "ABCD1",
"primaryDeliverable": "ABCD",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 22.50,
"putCall": "Call",
"exerciseStyle": "American",
"settlement": "PM"
}
{
"type": "OSDE",
"reporter": "MYID",
"optionID": "99123",
"kind": "Standard",
"optionsSymbol": "EFGH",
"primaryDeliverable": "EFGH",
"underlyingType": "Equity",
```

```
"expirationDate": 20181221,
"strikePrice": 5.00,
"type": "Call",
"exerciseStyle": "American",
"settlement": "PM"
}
{
"type": "OSDE",
"reporter": "MYID",
"optionID": 99124,
"kind": "Standard",
"optionsSymbol": "ABCD",
"primaryDeliverable": "ABCD",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 17.50,
"putCall": "Call",
"exerciseStyle": "American",
"settlement": "PM"
}
```

The pre- and post-Spinoff JSON Dictionary Entries shown above are also shown in table format below.

Table 7: Pre- and Post-Spinoff JSON Dictionary Entries

| Field Name | Pre-Spinoff Value | Post-Spinoff |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Entry \#1 Value | Entry \#2 Value | Entry \#3 Value |
| Exchange ID | CBOE | CBOE | CBOE | CBOE |
| Option ID | 4322 | 4322 | 99123 <br> (new unique id) | 99124 <br> (new unique id) |
| Option Kind | Standard | Non-standard | Standard | Standard |
| Underlying Type | Equity | Equity | Equity | Equity |
| Primary Deliverable | ABCD | ABCD | EFGH | ABCD |
| Option Symbol | ABCD <br> or <br> ABCD181221C00022500 <br> Note: EFGH is still part of parent company ABCD | ABCD1 <br> or <br> ABCD181221C00022500 <br> Note: Delivery components of ABCD1 include 10 shares of EFGH. CAT will know this since $A B C D 1$ is the | EFGH <br> or <br> EFGH81221C00005000 <br> Note: This a new standard option as of Aug 1, 2018 which delivers 100 shares of the new standalone | ABCD <br> or <br> ABCD181221C00017000 <br> Note: This is a new standard option as of Aug 1 2018, which delivers 100 shares of the parent company |

| Field Name | Pre-Spinoff Value | Post-Spinoff |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Entry \#1 Value | Entry \#2 Value | Entry \#3 Value |
|  |  | symbol used by OCC. | company EFGH. Investors will price the underlying and the options accordingly. | ABCD that remains after EFGH was spun off. Investors will price the underlying and the options accordingly. |
| Expiration <br> Date | 20181221 | 20181221 | 20181221 | 20181221 |
| Option Put/Call Code | c | c | C | c |
| Strike Price | 22.50 | 22.50 | 5.00 | 17.50 |
| Exercise Style | American | American | American | American |
| Settlement | PM | PM | PM | PM |

A final example demonstrates the impact of the third corporate action event - the stock split on November 1, 2018.

On November 1, 2018 ABCD undergoes a 3 for 2 stock split. Option contracts in ABCD and ABCD1 are affected. Contracts in ABCD become ABCD2 delivering 150 shares of underlying stock $A B C D$. Option symbol $A B C D 2=150$ ABCD. Contracts in $A B C D 1$ remain $A B C D 1$ and deliver 150 shares $A B C D$ and 10 shares EFGH. Option symbol ABCD1 $=150$ ABCD +10 EFGH. The exchange will again list a new ABCD delivering 100 shares of $A B C D$ stock upon exercise.

Before 3:2 Stock Split -- ABCD delivers 100 shares of ABCD. ABCD1 options deliver 100 shares of $A B C D$ + 10 shares EFGH.
\{
"type": "OSDE",
"reporter": "MYID",
"optionID": "4322",
"kind": "Non-Standard",
"optionsSymbol": "ABCD1",
"primaryDeliverable": "ABCD",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 22.50,
"putCall": "Call",

```
"exerciseStyle": "American",
"settlement": "PM"
}
{
"type": "OSDE",
"reporter": "MYID",
"optionID": "99124",
"kind": "Standard",
"optionsSymbol": "ABCD",
"primaryDeliverable": "ABCD",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 22.50,
"putCall": "Call",
"exerciseStyle": "American",
"settlement": "PM"
}
```

After 3:2 Stock Split - ABCD becomes ABCD2 and delivers 150 shares of ABCD. Symbol ABCD1 remains, though now delivers 150 shares $A B C D$ and 10 shares EFGH. The exchange lists new, standard ABCD options that deliver 100 shares of $A B C D$.

```
{
"type": "OSDE",
"reporter": "MYID",
"optionID": "4322",
"kind": "Non-Standard",
"optionsSymbol": "ABCD1",
"primaryDeliverable": "ABCD",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 22.50,
"putCall": "Call",
"exerciseStyle": "American",
"settlement": "PM"
}
{
"type": "OSDE",
"reporter": "MYID",
"optionID": "99124",
"kind": "Non-Standard",
"optionsSymbol": "ABCD2",
"primaryDeliverable": "ABCD",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 22.50,
"putCall": "Call",
"exerciseStyle": "American",
"settlement": "PM"
}
{
"type": "OSDE",
"reporter": "MYID",
"optionID": 100501,
"kind": "Standard",
```

```
"optionsSymbol": "ABCD",
"primaryDeliverable": "ABCD",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 15.00,
"putCall": "Call",
"exerciseStyle": "American",
"settlement": "PM"
}
```

### 2.4.3.Complex Option Dictionary Entry

The dictionary mapping for a complex option will contain the information presented in the table below. Each complex option can contain multiple legs, where each leg is either an option leg or a stock leg (stock leg will generically refer to equity/exchange-traded fund "ETF").

Table 8: Complex Option Dictionary Entries

| Complex Option Dictionary Entry (CODE) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| \# | Field Name |  | Data Type | Description | Include Key |
| 1 | type |  | Message Type | CODE | R |
| 2 | reporter |  | Reporter ID | The unique identifier assigned to the reporter by CAT | R |
| 3 | optionID |  | Text (40) | The unique ID assigned to this option by this reporter. No other simple/complex/flex option should receive the same ID. All reports from this reporter will use this ID to reference a particular option product | R |
| 4 | kind |  | Choice | Specifies if an option is a simple, complex, flex, or percentage denominated flex option. <br> For this message type, the kind will always be "Complex". <br> See Data Dictionary: kind | R |
| 5 | groupID |  | Text (40) | An identifier supplied by the user/reporter, to be associated with this entry. The value of the field is not checked by CAT, but it will be stored, and can be used to search for dictionary entries that have the same value | 0 |
| 6 | legs | legType | Choice | Defines the type of leg. <br> See Data Dictionary: <br> kind | R |
|  |  | side | Choice | The side of the order: See Data Dictionary: side | R |
|  |  | ratio | Unsigned | The ratio quantity for this leg, relative to the other legs. For option legs, the ratios must already be reduced to the smallest units possible | R |

## Complex Option Dictionary Entry (CODE)

| $\#$ | Field Name | Data Type | Description | Include Key |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  | optionID | Text (40) | The ID of the option - for option legs only. Note that <br> the Option ID for the leg must have already been <br> uploaded before using it in the definition of a complex <br> option. Furthermore, the combination of Option ID / <br> Side must be unique among all legs | C |
|  |  | symbol | Symbol | The symbol of the equity, in the symbology of the <br> listing exchange - for equity legs only. The same <br> symbol must not appear in more than one leg. Multiple <br> symbol legs are only allowed for index options only | C |
| 7 | testSeriesFlag | Boolean | Indicates that the entry represents a test symbol. <br> Events submitted for a test symbol are excluded from <br> linkage processing. | C |  |

The Option ID must be unique. Duplicate dictionary entries are ignored. Entries that have the same Option ID, but different details are rejected. Any entry which defines the opposite side of an existing entry will be rejected. For example, a complex option dictionary entry to Buy one (1) contract of option 1234 and Sell two (2) contracts of option 4321 is considered to be the "opposite side" of an entry to Sell one (1) contract of option 1234 and Buy two (2) contracts of 4321 . Thus, if both were submitted the second would be rejected.

## JSON Example

```
{
    "type": "CODE",
    "reporter": "MYID",
    "kind": "Complex",
    "optionID": "98765",
    "legs": [
        {
            "legType": "Option",
            "side": "Buy",
            "ratio": 1,
            "optionID": "121345"
        },
        {
            "legType": "Equity",
            "side": "Buy",
            "ratio": 100,
            "symbol": "ABCD"
        }
    ]
}
```

## JSON Example of reject

```
{
    "type": "CODE", "reporter": "MYID", "kind": "Complex",
    "optionID": "98765",
    "legs": [
        { "legType": "Option", "side": "Buy",
            "ratio": 1, "optionID": "121345"
        },
        { "legType": "Option", "side": "Sell",
            "ratio": 2, "optionID": "99999"
        }
    ]
}
{
    "type": "CODE", "reporter": "MYID", "kind": "Complex",
    "optionID": "56789",
    "legs": [
        { "legType": "Option", "side": "Sell",
            "ratio": 1, "optionID": "121345"
        },
        { "legType": "Option", "side": "Buy",
            "ratio": 2, "optionID": "99999"
        }
    ]
}
```

### 2.5. Market Maker Information

Each Equity SRO must submit to CAT a directory of information that lists industry member with which it has a reporting relationship and where the member makes a market in one or more equity symbols. Each Market Maker Dictionary entry identifies a specific industry member, symbol, market maker type, status and status time. The Market Maker may make a market in one or more symbols.

The Market Maker dictionary is loaded each day, and the data values only apply to that trading day. The Market Makers, their assigned Symbols, Market Maker Type, and Status may change on subsequent trading days.

The Market Maker Dictionary will be uploaded as a file of newline-delimited JSON objects, one object per Market Maker entry. The Market Maker dictionary must be uploaded to CAT no later than T+1 at 4:00 a.m. ET.

Table 9: Market Maker Dictionary Entry

## Market Maker Dictionary Entry (MMDE)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 1 | type | Message Type | MMDE | R |
| 2 | reporter | Reporter ID | The unique identifier assigned to the reporter by CAT | R |
| 3 | marketMaker | Member Alias | Identifier assigned to a member by the SRO as provided in the Member Dictionary | R |
| 4 | symbol | Symbol | Equity Symbol in listing market format, in which the Market Maker is registered on the exchange | R |
| 5 | marketMakerType | Market Maker Type | A list of exchange defined values for the Equity Market Maker distinguishing between types or designations of market makers. <br> See Data Dictionary: marketMakerType | R |
| 6 | marketMakerStatus | Choice | The status of the member/symbol for the reporting date. For details, see the Data Dictionary entry for Status <br> See Data Dictionary: marketMakerStatus | R |
| 7 | statusTime | Timestamp | Time of change in market maker's status. <br> If one record for a member alias and symbol combination is provided, it is assumed to be active for the entire day. For market making initiations not at the open, provide the start time. | R |
| 8 | definedMMDEData | Name/Value Pair | A list of key/value pairs, providing machine parseable exchange specific regulatory context data for the Equity Market Maker. The attributes are not defined in the spec, and can be any values as long as they conform to the format for a list of name/value pairs as defined under the Fundamental Data Types section of this document. | 0 |

The following example shows a Market Maker for exchange Exch1 where the first entry represents an industry member with one active symbol and another inactive.

```
{
    "type": "MMDE",
    "reporter": "Exch1",
    "marketMaker": "ABCD",
    "symbol": "PZ",
    "marketMakerType": "MM",
    "status": "Active",
    "statusTime": "20200714022015.123456789"
```

```
}
    "type": "MMDE",
    "reporter": "Exch1",
    "marketMaker": "ABCD",
    "symbol": "PX",
    "marketMakerType": "MM",
    "status": "Inactive",
    "statusTime": "20200714022216.123456789"
}
```

## 3. Special Data Elements and Common Events

This section describes data elements that are common to most order events, including timestamps, sequence numbers, symbols, material terms of an order, and elements used during the CAT process of creating order lifecycles.

Events that are universal, or common, are also described in this section.

### 3.1. Timestamps and Sequence Numbers

All timestamps are required to be reported in the greatest granularity in use by the reporter's trading platform, up to nanoseconds. While the timestamp generally allows the system to properly sequence events within the lifecycle of an order event, it is possible for multiple events to have the same timestamp, especially if the granularity of the reported timestamp is insufficient. In these cases, the system cannot confidently sequence the events by timestamp alone. When it is possible for multiple events --- from the same reporter, on the same day ${ }^{6}$, in the same symbol --- to have the same timestamp, a sequence number must also be provided for each event.

The sequence number is required to be strictly increasing, and must guarantee proper sequencing of events in the order in which they originally occurred. The sequence number may be globally unique, in which case it provides sequencing unilaterally; however, this is not required. The sequence number does not sequence events across multiple reporters.

The system only uses the sequence number if two or more events have the same timestamp. If the timestamp alone provides the ability to determine the proper order of the events, the sequence number does not need to be reported.

### 3.1.1.Sequence Number Subsystems

The purpose of the sequence number is to allow regulators to sequence multiple events that have the same timestamp. However, reports for the same reporter/date/symbol may originate from multiple systems, and it may be difficult to coordinate a sequence number that is unique among all subsystems.

In such cases, a sequence number subsystem (seqNumSub) can be optionally reported along with the sequence number. This value can be examined to better determine ordering characteristics of the events that have the same timestamp value.

[^4]
### 3.1.2.Time of Order Receipt

The time of order receipt is the time at which an exchange Participant assigns an Order-ID to an incoming message.

### 3.2. Symbology

When reporting events for equities, the symbol must be reported in the symbology of the listing exchange or using an alternate symbology identified in the symbol master as described in Section 2.2.

Any reporter who reports options events must submit an option dictionary to CAT. All options are identified using the Option ID, as provided to CAT in the reporter's option dictionary.

### 3.3. NBBO

The NBBO is provided with each relevant order event (i.e., when available). This is the NBBO from the perspective of the reporter at the time of the event, but not including the effect that the event would have on the NBBO. For example, if the NBBO were 100@10.10 x 100@10.15, and a new order arrived at the exchange to BUY 100@10.10, the reported NBBO would be 100@10.10 x 100@10.15, even though the immediate effect of the order would be to change the best bid to 200@10.10.

Note that the bid/ask prices are required, but the quantities being bid or offered are optional.

There exist some special cases where the NBBO is unavailable or nonexistent. In those cases, the NBBO values should be reported with a zero price and zero quantity. An entry with both the price and quantity of zero will indicate that the data was either unavailable or not applicable for that particular event. Note that the values can't just be reported as unavailable because it is hard to acquire them. They must truly be unavailable or not applicable to that particular event. NBBO prices are not required for leg-level events of complex orders and zero may be provided in lieu of a quote price.

### 3.4. Order Linkage and Lifecycle

When all members have submitted their reports to CAT for a given trading day, CAT will link all reportable events to create a complete lifecycle of each order. A key part of being able to connect the orders is recognizing and connecting the daisy chain of orders across all CAT reporters. In order to accomplish this, both the reporter routing an order away and the reporter accepting the order must report the exact same details about the order.

Of particular interest to reporting participants, the data elements important to creating cross-reporter order linkages are: Exchange ID, Date, Symbol/Option, Routing Party, Routed Order ID, and Session ID.

When an order is routed to an exchange, each communication protocol specifies a way to uniquely identify that order (e.g., FIX protocol calls it CIOrdId, OUCH calls it Order Token). However, the uniqueness guarantees differ from protocol to protocol. Some exchanges may assign a unique Member Alias for each account, and require uniqueness based on the account ID and order ID alone. Others may issue special identifiers for each API session that the member uses to connect into the exchange. Since there is no universally accepted method, CAT uses a combination of several different attributes that provide flexibility in ensuring globally unique order IDs across all known supported protocols.

Both the routing firm — once industry member reporting has commenced - and the exchange will submit information to CAT in their Order Route and Order Accepted reports. Note that exchange and industry member Routed Order ID, Routing Party, and Session ID must exactly match between in order for CAT to accomplish the linkage process.

The Routed Order ID is the unique order identifier sent in the API message going from the routing entity to the destination entity.

The Routing Party is a text string that the exchange has assigned to the firm routing the order. Complexity arises when a member is assigned multiple values by the exchange. The determination as to which value is used by both parties depends on protocol-specific information. The text string can be a Member Alias, but there is no restriction that it must be a Member Alias. It can be any string, so long as both the sender of the order and the exchange agree on using the same string for their orders.

The Session ID is also exchange-assigned, usually a unique login account, an actual protocol session name, IP/port combination, or some other means of identifying a particular API session. The Session ID identifies the specific session used to route the order. Even in cases where there is only one session in use between reporters, the same non-empty value must be reported in the session field by both parties.

CAT, in cooperation with each exchange, shall determine how the Routing Party, Routed Order ID, and Session ID are derived for each API supported by the exchange. This guidance will be documented and published on the CAT website.

Figure 2: Order Linkage and Lifecycle

### 3.5. Material Terms of an Order

The material terms of an order include but are not limited to price, quantity, side, order type, open/close indicator (for options), time in force, and special handling instructions. Each order event includes fields for each of these.

However, each exchange offers significant distinguishing features and instructions to describe how orders are to be handled. These differences are mainly captured in the possible values for the order type and any special handling instructions. The CAT system is generally agnostic to these values, and their primary utility is in how they are interpreted and used in surveillance activities.

In order to provide utility in using the reported data for surveillance purposes, both the reporters and the users must have well known definitions of the data being reported. In addition, without specific definitions, the submitted data cannot be checked for integrity in those fields that comprise the material terms of an order. Thus, every possible value for each field must be explicitly defined both in this specification and the separate specification document for industry members ${ }^{7}$. Every value that could possibly be reported must

[^5]be well-defined in the technical specifications. CAT maintains the technical specifications for both the participants and industry members to reflect changes to order types and/or handling instructions over time. Each exchange must provide guidance to CAT on how these values are determined for each of their system interfaces, with lead time sufficient to allow CAT to update the specifications for both participants and industry members.

### 3.5.1.Order Types

The Order Type for each order must be assigned with exactly one value from a predefined set of choices. These choices are documented in the data dictionary entry for Order Type (see Appendix F). CAT, in cooperation with each exchange, has defined a list of acceptable values for this field, however additional order types may be added to accommodate future market needs.

The CAT website contains guidance on how these choices can be determined for each exchange API.

### 3.5.2.Order Handling Instructions

The Handling Instructions field defines special instructions as to how the order should be handled by the exchange. Neither SEC Rule 613, nor the CAT NMS Plan dictate the special handling instructions that must be supported. Furthermore, each exchange may use different names and values to describe how orders are handled, and there can be numerous customized special handling instructions. While the CAT processor must be able to support any instructions which are required to be reported, mandating specific instructions is beyond the scope of the CAT processor as that information is only known by the exchanges and the appropriate surveillance and regulatory entities. Thus, the allowed values for this field support a wide array of special handling instructions. Order Handling Instructions' values must be documented in the data dictionary of this technical specification, and guidance must be provided to CAT by reporters for how these values can be determined based on each exchange API. Guidance will be subsequently posted on the CAT website.

The Handling Instructions field can specify as many special handling instructions as apply for that order (or be empty if no such instructions apply). Thus, the handling instructions field will be a list of name/value pair.

Note that the full intent of the order is reportable to CAT. At a minimum, every term and/or instruction for an order that is communicated to the exchange must be reported to CAT. It can be reported as part of the standard set of material terms, or via one of the defined name/value pairs as defined in the Handling Instructions section of the Data Dictionary. Reporters cannot choose which order instructions to report: they must report every instruction applicable to each order.

Note that the Order Handling Instructions field is marked as 'conditionally required' in the event definitions, because its existence is not enforced by the system. If the order does not have any characteristics that are reportable to CAT, then the field does not have to be provided. However, if there are any explicit or implied handling instructions for the order, then this effectively becomes a required field, as all instructions must be reported.

For example, assume two hypothetical handling instructions: AON and WDS=<percent>; where AON means all-or-none and WDS means a discretion price is allowed to be less than or equal to some percentage of the spread. If an order were to be placed as all-or-none, with a discretion of up to 50 percent of the spread, then the Order Handling Instructions field would contain "AON|WDS=50" as its value.

This approach provides flexibility for exchanges, enabling them to represent a wide array of handling instructions, while also enabling CAT to validate submitted data and providing regulators a defined structure for interpretation of the data.

### 3.6. Optional, Required, and Conditional Fields

Subsequent sections describe event types and their fields. Each field will be notated with the abbreviation R, O, C, or $r$ to represent whether it is required, optional, conditional, or required conditionally. This codification will be present in the last column of each table describing an event.

Table 10: Optional, Required and Conditional Fields

| Type | Abbreviation | Description |
| :--- | :--- | :--- |
| Optional | O | Optional for the event, may be included at the discretion of the reporter |
| Conditional | C | Conditional fields may be required depending on the contents of the <br> event. For example: in the note event, quoteID and orderID are <br> conditional fields. If the note event is on a quote, then quoteID is required, <br> if the note event is on an order, then orderID is required |
| Required | R | Required for the event, must always be included. For example, the field <br> "type" is always required. |
| Required <br> Conditionally | r | This is a special category of fields that currently applies to options only. <br> Specifically, fields marked as 'r' are required if the event applies to a <br> simple option order, but they are conditional if the event applies to an <br> option order that is part of a complex order |

### 3.7. Common Events

### 3.7.1.Note Event

The Note Event is a generic event that accommodates reporting for events that are not defined with explicit events. For example, there could be certain events that occur in the process of handling an order on the floor of an exchange that may be desired to be included in the trail of events for a particular order, but don't fit into an explicitly defined reportable event. In another example, there could be a certain process that the order goes through as part of its handling that does not constitute a change in terms of the order, but may be beneficial as part of the order's audit trail.

The Note event requires either an Order ID or a Quote ID (but not both), so that the notation can be appropriately linked by CAT to the associated order/quote. If the note relates to a stock order, then both orderID and symbol are required. If the note relates to an option order/quote then both optionID and orderID/quoteID are required.

Table 11: Note Event

## Note (NOTE)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 1 | type | Message Type | NOTE | R |
| 2 | reporter | Reporter ID | The identifier for the reporter that generated the note | R |
| 3 | eventTimestamp | Timestamp | The date/time of the event being noted | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The symbol of order; for a stock order | C |
| 7 | optionID | Text (40) | The ID of the option; for an option order/quote | C |
| 8 | quoteID | Text (40) | The ID of the quote on which the note is being placed, only applicable if the note is related to a quote | C |
| 9 | orderID | Text (40) | The ID of the order on which the note is being placed, only applicable if the note is related to an order | C |

## Note (NOTE)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 10 | noteType | Choice | One of several predefined types of notation <br> events, providing a way to classify or <br> categorize notations. <br> See Data Dictionary: noteType | $R$ |
| 11 | definedNoteData | Name <br> Value <br> Pairs | A list of key/value pairs, providing machine <br> parseable data for the notation. <br> See Data Dictionary: definedNoteData | O |
| 12 | undefinedNoteData | Name <br> Value <br> Pairs | A list of key/value pairs, providing machine <br> parseable data for the notation. The <br> attributes are not defined in the spec, and <br> can be any values as long as they conform <br> to the format for a list of name/value pairs as <br> defined under the Fundamental Data Types <br> section of this document. | O |
| 13 | note | cycleDate | Text (255) | A free-form text field to describe the notation <br> for the event |
| 14 | Date | Set equal to the US business date upon <br> which the daily trading cycle of an event <br> ends. A trading cycle may include more than <br> one trading session. In global trading <br> scenarios, the trading cycle of an order may <br> span multiple dates due to the CAT <br> requirement for representing all event <br> timestamps in Eastern Time as well as the <br> occurrence of US Holidays. <br> An event that occurs on a Global Market <br> where the Eastern Time equivalent is a non- <br> US business date including a holiday or <br> weekend must set the Cycle Date equal to <br> the next US business date. And an event <br> that occurs on a Global Market where the <br> Eastern Time equivalent is a US business <br> date (T) where subsequent events for that <br> event may occur on the next Eastern Time <br> equivalent US business date (T+1) must set <br> the Cycle Date equal to T+1. <br> The Cycle Date must be populated for all <br> orders in an options series for which the <br> trading cycle begin date is prior to the <br> trading cycle end date. The Cycle Date must <br> be between the Event Date and T+1, <br> inclusive. (Where T+1 means Trade Date <br> plus the next Trade Date.) |  |  |

The Note Type and Defined Note Data fields are well-defined and must conform to the permitted values as described in this specification. The Undefined Note Data can accommodate any attributes, as long as the field conforms to the format for a list of name/value pairs.

Thus, Note Events, while generic in nature, can be parsed and evaluated by both humans and computer programs.

## Linkage Keys for NOTE:

- Order Key: date, reporter, symbol, orderID
- Order Key: date, reporter, optionID, orderID
- Quote Key: date, reporter, optionID, quoteID

### 3.7.2.Self-Help Declarations

"Self-help" declarations allow market participants to disregard the protected quotations of trading centers that are experiencing systems problems such as failure, material delay, or malfunction.

Participants must report to CAT any self-help declarations they make. If a self-help declaration is carried over to the next day, it must be reported again on that day. The following data is required to be reported for Self-Help declarations:

Table 12: Self-Help Declaration

Self-Help Declaration (SHD)

| \# | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message Type | SHD | R |
| 2 | reporter | Reporter ID | Identifier of reporter declaring self-help | R |
| 3 | declaredTimestamp | Timestamp | Date and time self-help was declared | C |
| 4 | revokedTimestamp | Timestamp | Date and time self-help was revoked. Self-help <br> declarations must be reported each day. If self-help is <br> not revoked by the end of the day, this field may be left <br> unreported or can be set to the closing time. However, <br> another self-help event must be reported for the next <br> day | C |
| 5 | awayExchange | Exchange ID | Exchange affected by self-help event | R |
| 6 | comments | Text (255) | Date | Comments related to self-help event |

## Self-Help Declaration (SHD)

| \# | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
|  |  | including a holiday or weekend must set the Cycle <br> Date equal to the next US business date. And an <br> event that occurs on a Global Market where the <br> Eastern Time equivalent is a US business date (T) <br> where subsequent events for that event may occur on <br> the next Eastern Time equivalent US business date <br> (T+1) must set the Cycle Date equal to T+1. <br> The Cycle Date must be populated for all orders in an <br> options series for which the trading cycle begin date is <br> prior to the trading cycle end date. The Cycle Date <br> must be between the Event Date and T+1, inclusive. <br> (Where T+1 means Trade Date plus the next Trade <br> Date.) |  |  |

Both the declared and revoked timestamps can be reported in one single event by including both declaredTimestamp and revokedTimestamp. Alternatively, the declaration and revocation can be reported independently by just including the relevant timestamp in separate events.

### 3.7.3.Supplemental Trade Event

Each trade event (stock and option) contains some information which may not be readily available when generating the trade event. Thus, an independent event can be submitted to augment the information in the trade event. These events can be submitted in the same file as other events or in a separate file.

These events will not be recorded as separate events in CAT. Rather, the information in these events will be merged with the appropriate trade event to provide data that may have been missing in the original trade event. Currently, only the saleCondition can be reported in this way. Supplemental Trade Events must be received within the four day processing window (e.g., by T+4 at 8:00 a.m. ET) in order to update the trade event.

This event is used for stock and option trades. If the trade references a stock, then the symbol field must be provided. If the trade references an option, then the optionID field must be provided.

The description uses "trade" in a general manner. If the event references a trade, the tradeID field is required. If the event references a fill, the fillID and side are required.

Table 13: Supplemental Trade Event

Supplemental Trade Event (STE)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message Type | STE | R |
| 2 | exchange | Exchange ID | The ID of the exchange where the trade took place | R |
| 3 | tradeID | Text (40) | The tradeID from the original trade event | C |
| 4 | fillID | Text (40) | The fillID from the original fill event | C |
| 5 | optionID | Text (40) | The ID of the option being traded | C |
| 6 | symbol | Symbol | Theice symbol for the stock being traded | C |
| 7 | saleCondition | Text (8) | Side of the executed trade (required when fillID is <br> used) <br> See Data Dictionary: side | C |
| 8 | cycleDate | Date | Conditions under which trade was executed |  |
| The | Set equal to the US business date upon which the <br> daily trading cycle of an event ends. A trading cycle <br> may include more than one trading session. In global <br> trading scenarios, the trading cycle of an order may <br> span multiple dates due to the CAT requirement for <br> representing all event timestamps in Eastern Time as <br> well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the <br> Eastern Time equivalent is a non-US business date <br> including a holiday or weekend must set the Cycle <br> Date equal to the next US business date. And an <br> event that occurs on a Global Market where the <br> Eastern Time equivalent is a US business date (T) <br> where subsequent events for that event may occur on <br> the next Eastern Time equivalent US business date <br> (T+1) must set the Cycle Date equal to T+1. <br> The Cycle Date must be populated for all orders in an <br> options series for which the trading cycle begin date is <br> prior to the trading cycle end date. The Cycle Date <br> must be between the Event Date and T+1, inclusive. <br> (Where T+1 means Trade Date plus the next Trade <br> Date.) | C |  |  |

## Linkage Keys for STE:

- Trade Key: date, exchange, symbol, tradeID
- Trade Key: date, exchange, optionID, tradeID
- Fill Key: date, exchange, symbol, fillID
- Fill Key: date, exchange, optionID, fillID

### 3.7.4.Reject Message Event

This event may be submitted in the Test Environment beginning on November 14, 2022 and in the Production Environment beginning on December 5, 2022.

The Reject Message Event is reported when an exchange rejects a message, for example, when an exchange received a message that could not be accepted by the receiving system. This event is not intended for malformed messages. It is intended for well-formed messages that fail validation and are assigned a reject reason by the receiver. See JSON example below:

```
{
    "type":"RME",
    "exchange":"EXCH1",
    "symbol":"SYM",
    "eventTimestamp":"20221110T120000.000000",
    "sequenceNumber":58,
    "seqNumSub":"random",
    "exchangeInternalID":"123456",
    "routingParty":"ABCD",
    "routedOrderID":"orderID",
    "session":"ssn1",
    "routedOriginalOrderID":"12345678",
    "rejectReason":52,
    "rejectContext":[{"exampleContext":"random"}],
    "member":"Mem01",

}
```

A single event structure is defined for both equities and options, and it applies to both order-related and quote-related messages.

Table 14: Reject Message Event

Reject Message Event (RME)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message <br> Type | RME | R |
| 2 | exchange | Exchange <br> ID | The ID for the exchange which received the <br> rejected message. | R |
| 3 | symbol | Symbol | Symbol for the stock being traded. <br> Required for equity messages, including equity <br> orders; stock legs of multi-leg orders; and stock | C |

## Reject Message Event (RME)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | legs for cross orders. Must match the symbol on the Industry Member's route event. <br> Required for all stock-related events unless the submitted value was missing or unreadable. <br> For simple option messages with a single underlying equity, the stock symbol should be provided unless the submitted value was missing or unreadable. |  |
| 4 | optionID | Text (40) | The ID of the option being traded. <br> Required for all rejections related to a simple option unless the submitted value was missing or unreadable. <br> Required for all rejections related to a complex option unless the submitted value was not yet defined for the strategy, missing or unreadable. | C |
| 5 | eventTimestamp | Timestamp | The date/time of reject event. | R |
| 6 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps. | C |
| 7 | seqNumSub | Text (10) | A sequence number subsystem identifier assigned to the system that rejected the message. <br> Required if the process or processes rejecting messages are different from the process assigning eventTimestamp values and sequenceNumber values to other events. | C |
| 8 | exchangeInternalID | Text (40) | The internal ID assigned to the order or quote by the exchange. <br> Required if the message is related to an existing order (such as a quantity reduction), and the nature of the rejection allows the exchange to match the rejected message to the existing order. | C |
| 9 | routingParty | Text (20) | The ID string used to identify the entity that routed the rejected message to the exchange. Must match the senderIMID on the Industry Member's route event. <br> Required unless the submitted value was missing or unreadable. | C |
| 10 | routedOrderID | Text (40) | The order ID that the firm used in the API message when they sent the rejected message to the exchange (e.g., in FIX it would be ClOrdld, in OUCH it would be Order Token). <br> Must match the routedOrderID value from the Industry Member's route event. | C |

## Reject Message Event (RME)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | Required unless the submitted value was missing or unreadable. |  |
| 11 | session | Text (40) | The ID assigned to the specific session that the routing member used to route the rejected message to the exchange. <br> Must match the session value from the Industry Member's route event. <br> Required unless the submitted value was missing or unreadable. | C |
| 12 | routedOriginalOrderID | Text (40) | The ID for the order being modified, as sent by the routing broker in the original route message, or the most recent modify message (in FIX OrigCIOrdID, in OUCH Existing Order Token). <br> Required if the message can be connected to an order that exists within the system. | C |
| 13 | rejectReason | Choice | Code representing the reason why the order was rejected. Codes are exchange-specific. See Data Dictionary for the list of allowed values. | R |
| 14 | rejectContext | Name/Value Pairs | A list of key/value pairs, providing machine parseable data for the notation. The attributes are not defined in the spec, and can be any values as long as they conform to the format for a list of name/value pairs. <br> Any additional information can be provided in this field. For example, the entire rejected message in Tag=Value format. | 0 |
| 15 | member | Member Alias | The identifier for the member firm that is responsible for the order. | C |
| 16 | cycleDate | Date | Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date ( $\mathrm{T}+1$ ) must set the Cycle Date equal to $\mathrm{T}+1$. <br> The Cycle Date must be populated for all orders in an options series for which the trading cycle begin | C |

## Reject Message Event (RME)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  | date is prior to the trading cycle end date. The <br> Cycle Date must be between the Event Date and <br> T+1, inclusive. (Where T+1 means Trade Date plus <br> the next Trade Date.) |  |

The Processor will attempt linkage for all Reject Message events. If all Lifecycles Keys are present (as defined below), a link will be made. If all Lifecycle Keys are not present, no link will be made. Reject Messages events that fail to link will not generate feedback; nor will they be included on report card statistics.

Lifecycle Keys for this event:

- Equities
- Order Key: date, exchange, symbol, exchangelnternallD
- Quote Key: date, exchange, symbol, exchangelnternallD
- Route Link Key: date, symbol, routingParty, routedOrderID, session, exchange
- Simple Options Orders and Quotes:
- Order Key: date, exchange, optionID, exchangelnternalID
- Quote Key: date, exchange, optionID, exchangeInternalID
- Route Link Key: date, optionID, routingParty, routedOrderID, session, exchange
- Complex Options Orders:
- Complex Order Key: date, exchange, [OptionID,] exchangeInternalID
- Route Link Key: date, routingParty, routedOrderID, session, exchange

The Linkage Keys above have been grayed out as the Reject Message Event will not be linked to accepted data in the initial phase of rejection reporting. Linkage may be performed at a later time, pending the results of a data study and submission and approval of a corresponding Change Request.

## 4. Events for Stock Exchanges

Within this Technical Specification, events for stock exchanges, options exchanges, and the trade reporting facilities are documented in separate sections. This section describes reportable events for stock exchanges.

Table 15: Events for Stock Exchanges

| Sec | Event | Message <br> Type | Description |
| :--- | :--- | :--- | :--- |
| 4.1 | Order Accepted | EOA | An Exchange receives and accepts a routed order |
| 4.2 | Order Route | EOR | An Exchange routes an order through a routing broker dealer |
| 4.3 | Internal Order Route | EIR | An exchange routes an order to another internal subsystem |
| 4.4 | Order Modified | EOM | The material terms of an order have been changed |
| 4.5 | Order Adjusted | EOJ | A select set of material terms of an order have been changed |
| 4.6 | Order Canceled | EOC | An Exchange cancels an order in part or in whole |
| 4.7 | Order Trade | EOT | All trades are reported to CAT as two-sided transactions with a single <br> event |
| 4.8 | Order Fill | EOF | When a routed order executes, the Exchange reports the fill with the <br> order and the routing firm |
| 4.9 | Order Cancel Route | ECR | An exchange initiates a cancel request on an order that it previously <br> routed away. |
| 4.10 | Order Modify Route | EMR | An exchange initiates a modify or cancel/replace request on an order <br> it previously routed away |
| 4.11 | Order Restatement | EORS | An order that persists across multiple business days is restated each <br> day before any other activity is reported for that symbol |
| 4.12 | Trade Break | ETB | A trade is broken |
| Trade Correction | ETC | A trade is corrected |  |

### 4.1. Order Accepted Event

When an exchange receives and accepts a routed order, an Order Accepted event is reported to CAT. If the order is rejected (i.e., not received and successfully processed by the matching engine), then an event is not reported to CAT.

Some systems will outright reject messages if they are malformed or contain a duplicate order ID. Other systems will silently ignore certain malformed messages (e.g., the OUCH protocol specifically states that new orders containing duplicate order tokens are silently ignored). However, all current systems will send some sort of positive acknowledgement when an order has been finally accepted into the system. Some systems will send an acknowledgement from the gateway upon receipt of the request, but the order could still possibly be rejected instead of accepted by the matching engine. Such protocols have a prescribed way of notifying the sender whether or not their order was actually accepted.

The basic rule is that orders rejected by the gateway are not reportable, but any order reaching the matching engine is reportable.

Note that for the order accepted event, the firm that sends the order to the exchange will be referred to as the routing firm. In the next event, order route event (section 4.2), the routing broker dealer will also be referred to as the routing firm.

The Order ID that is used in orders must be globally unique when combined with the date, exchange, symbol and general side, where the general side is either Buy or Sell.

Table 16: Order Accepted

Equity Order Accepted (EOA)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message <br> Type | EOA | R |
| 2 | exchange | Exchange ID | The ID for the exchange which has accepted this <br> order | R |
| 3 | eventTimestamp | Timestamp | The date/time of order receipt | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify <br> the sequence of events when multiple events have <br> the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |

## Equity Order Accepted (EOA)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 6 | symbol | Symbol | The stock symbol, in either the symbology of the listing exchange or a valid alias | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the exchange | R |
| 8 | routingParty | Text (8) | The ID string used to identify the entity that routed this order to the exchange | R |
| 9 | routedOrderID | Text (40) | The order ID that the firm used in the API message when they sent the order to the exchange (e.g., in FIX it would be CIOrdld, in OUCH it would be Order Token) | R |
| 10 | session | Text (40) | The ID assigned to the specific session that the routing member used to route the order to the exchange | R |
| 11 | side | Choice | The side of the order: See entry for "side" in the Data Dictionary for acceptable values | R |
| 12 | price | Price | The limit price of the order, if applicable. This must be provided when orderType indicates a limit order. | C |
| 13 | quantity | Unsigned | The order quantity | R |
| 14 | displayQty | Unsigned | The displayed quantity for this order | R |
| 15 | displayPrice | Price | The displayed price for this order. This must be provided when displayQty is greater than zero. | C |
| 16 | workingPrice | Price | The working price of the order at the time it was accepted. Note that Modified events must be reported to CAT anytime the working price changes. | C |
| 17 | orderType | Choice | The type of order being submitted (e.g., market, limit). See the corresponding entry in the Data Dictionary for more details about order types | R |
| 18 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values | R |
| 19 | capacity | Choice | See entry for "capacity" in the Data Dictionary for acceptable values | R |
| 20 | handlingInstructions | Name/Value Pairs | Defines the handling instructions, as described in Data Dictionary for Handling Instructions | C |
| 21 | orderAttributes | Name/Value Pairs | Defines reportable attributes of an order, that are not necessarily handling instructions | C |

## Equity Order Accepted (EOA)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 22 | member | Member Alias | The identifier for the member firm that is responsible <br> for the order | R |
| 23 | nbbPrice | Price | The NBBO at the moment the order was accepted. <br> Prices are required. Quantities are optional | R |
| 24 | nbbQty | Unsigned |  | O |
| 25 | nboPrice | Price |  | R |
| 26 | nboQty |  |  | O |

## Linkage Keys for EOA:

- Order Key: date, exchange, symbol, orderID
- Route Link Key: date, symbol, routingParty, routedOrderID, session, exchange
- Cross Order Key: date, exchange, orderID, pairedOrderld (if populated in order attributes name value pair)

### 4.2. Order Route Event

The following Order Route event is used to report when an exchange routes an order through a routing broker dealer.

When an order is routed, some exchanges create a derived order (with a different order ID), to represent the order being routed away. Others just route the order (or part of the order) straight to the routing broker without changing the Order ID. In either case, CAT must be able to link the internal order on the exchange with the internal order at the routing BD. Thus, both the report from the exchange and the report from the routing BD must have the same identifiers for the routed order. This is very similar to the process described earlier related to the Accepted event.

Note that for an order route event, the routing broker is referred to as the routing firm.

The Order Route event reported by the exchange needs three key pieces of information: the Routing Firm receiving the routed order, the Session ID through which the order is being routed, and the Routed Order ID, which is the order ID sent to the routing firm.

The Routing Firm must be represented by an entry in the exchange's member dictionary (though not necessarily a member of the exchange). Furthermore, as explained in the linkage section, both the exchange and the Routing Firm must know which Member Alias is to be reported to CAT because both will have to report the same Member Alias (the exchange in their Route event, and the firm in their

Accepted event). Either both sides must use a constant value, or there must be some way to derive the value being used (via session configurations or in the message itself).

If the exchange creates a derived order, and passes that order ID to the firm via its API, then the Routed Order ID will be the order ID of the derived order. If, however, there is no derived order and the exchange passes its own internal order ID to the routing broker, then the internal order ID will also be assigned as the Routed Order ID. In this case, both the order ID and the routed order ID are populated with the same value.

Table 17: Order Route

| Equity Order Route (EOR) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 1 | type | Message Type | EOR | R |
| 2 | exchange | Exchange ID | The ID for the exchange which is routing this order | R |
| 3 | eventTimestamp | Timestamp | The date/time at which the order was routed | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol, in either the symbology of the listing exchange or a valid alias | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the exchange | R |
| 8 | routingParty | Text (8) | The ID string used to identify the entity receiving this routed order. This value must match the value reported by the routing broker in their Order Accepted report | R |
| 9 | routedOrderID | Text (40) | The ID assigned to this order by the exchange when submitting the order to the routing firm. This value must match the value reported by the routing broker in their Order Accepted report | R |
| 10 | session | Text (40) | The ID assigned to the specific session used when sending the order from the exchange to the routing firm. | R |
| 11 | side | Choice | The side of the order: See entry for "side" in the Data Dictionary for acceptable values | R |

## Equity Order Route (EOR)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 12 | price | Price | The limit price of the order, if applicable. This must be provided when orderType indicates a limit order. | C |
| 13 | quantity | Unsigned | The order quantity | R |
| 14 | displayQty | Unsigned | The displayed quantity for this order | R |
| 15 | orderType | Choice | The type of order being submitted (e.g., market, limit). See the corresponding entry in the Data Dictionary for more details about order types | R |
| 16 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values | R |
| 17 | capacity | Choice | See entry for "capacity" in the Data Dictionary for acceptable values | R |
| 18 | handlingInstructions | Name/Value Pairs | Defines the handling instructions, as described in Data Dictionary for Handling Instructions | C |
| 19 | result | Choice | The result of the route request (e.g. acknowledged, rejected, or no response). See the Data Dictionary for the list of allowed values | 0 |
| 20 | resultTimestamp | Timestamp | The date/time the result of the request was received, required if the result is ACK (acknowledged) or REJ (rejected) | 0 |
| 21 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |
| 22 | nbbPrice | Price | The NBBO at the moment the order was routed. Prices are required. Quantities are optional | R |
| 23 | nbbQty | Unsigned |  | 0 |
| 24 | nboPrice | Price |  | R |
| 25 | nboQty | Unsigned |  | 0 |

## Linkage Keys for EOR:

- Order Key: date, exchange, symbol, orderID
- Route Link Key: date, symbol, exchange, routedOrderID, routingParty

### 4.3. Internal Order Route Event

In some cases, an exchange may have multiple internal subsystems involved in handling orders. In such cases, and order may be accepted by one internal system, and then routed to one or more internal
systems for processing. Routes within an exchange are not required to be reported to CAT. However, there are cases where it is difficult for an exchange to report the entire status of an order to CAT when its internal processing is handled on multiple systems. Specifically, ensuring that the events contain the same order identifiers would require substantial post processing.

Thus, an internal route event may be reported to CAT, indicating that an order is being passed from one internal system to another. This will allow CAT to link events that are related to the same order within an exchange, even if the exchange has changed the identifiers on the order as it moves between internal systems.

Table 18: Internal Order Route

Equity Internal Order Route (EIR)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message <br> Type | EIR | $R$ |
| 2 | exchange | Exchange ID | The ID for the exchange which is routing this order. | R |
| 3 | eventTimestamp | Timestamp | The date/time at which the order was routed. | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify <br> the sequence of events when multiple events have <br> the same timestamps. | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol, in either the symbology of the <br> listing exchange or a valid alias | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the <br> exchange | R |
| 8 | routingParty | Text (8) | The ID string used to identify the internal subsystem <br> that is receiving this routed order. This value must <br> match the value reported by the receiving subsystem <br> in the routingParty field of their Order Accepted <br> report | R |
| 9 | routedOrderID | Text (40) | The ID assigned to this order by the exchange when <br> submitting the order to the subsystem. This value <br> must match the value reported by the receiving <br> subsystem in the routedOrderID field of their Order <br> Accepted report | R |
| 10 | session | Text (40) | The ID assigned to the specific session used when <br> sending the order from the sending subsystem to the <br> receiving subsystem. This value must match the value <br> reported by the receiving subsystem in the session <br> field of their Order Accepted report | R |

## Equity Internal Order Route (EIR)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 11 | side | Choice | The side of the order: See entry for "side" in the Data Dictionary for acceptable values | R |
| 12 | price | Price | The limit price of the order, if applicable. This must be provided when orderType indicates a limit order. | C |
| 13 | quantity | Unsigned | The order quantity | R |
| 14 | displayQty | Unsigned | The displayed quantity for this order | R |
| 15 | orderType | Choice | The type of order being submitted (e.g., market, limit). See the corresponding entry in the Data Dictionary for more details about order types | R |
| 16 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values | R |
| 17 | capacity | Choice | See entry for "capacity" in the Data Dictionary for acceptable values | R |
| 18 | handlingInstructions | Name/Value Pairs | Defines the handling instructions, as described in Data Dictionary for Handling Instructions | C |
| 19 | result | Choice | The result of the route request (e.g. acknowledged, rejected, or no response). See the Data Dictionary for the list of allowed values | 0 |
| 20 | resultTimestamp | Timestamp | The date/time the result of the request was received, required if the result is ACK (acknowledged) or REJ (rejected) | 0 |
| 21 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |

## Linkage Keys for EIR:

- Order Key: date, exchange, symbol, orderID
- Route Link Key: date, symbol, exchange, routedOrderID, session, routingParty

### 4.4. Order Modified Event

An event must be sent to CAT to report any customer modification to the order. Additionally, an event must be sent to CAT to report any changes to the order due to an exchange action, including updates related to changes in market conditions.

Events that should be reported include, but are not limited to:

- Any customer update that passes validation and is successfully processed by the trading system
- Changes to the available quantity of the order, such as liquidity returning from an away market unexecuted
- Changes to the working price, display price, or display quantity
- Changes to the executability of an order, such as when a regular-hours order arrived prior to the opening time and it is now the opening time or when an order expires and no explicit cancellation is provided

This event supports all possible modifications to an equity order. The full state of the order should be reported, including fields that did not change as a result of the modification.

Table 19: Order Modified

## Equity Order Modified (EOM)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 1 | type | Message Type | EOM | R |
| 2 | exchange | Exchange ID | The identifier for the exchange which has modified this order | R |
| 3 | eventTimestamp | Timestamp | The date/time at which the modification was received or originated | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol, in either the symbology of the listing exchange or a valid alias | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the exchange | R |
| 8 | originalOrderID | Text (40) | The internal order ID before the modify / replacement created a new order ID. If the order kept its ID through the modification, then this value need not be included | C |
| 9 | initiator | Choice | Indicates who initiated the order modification: See entry for "initiator" in the Data Dictionary for acceptable values | R |
| 10 | nbbPrice | Price | The NBBO at the moment the order was modified. Prices are required. Quantities are optional | R |
| 11 | nbbQty | Unsigned |  | 0 |

## Equity Order Modified (EOM)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 12 | nboPrice | Price |  | R |
| 13 | nboQty | Unsigned |  | 0 |
| 14 | price | Price | The limit price of the order, if applicable. This must be provided when orderType indicates a limit order. <br> Note that this is only for reporting limit price modifications. Automated changes to prices (e.g., PEG orders) would be tracked by reporting a difference in the working price. See the PEG example in section 7.5 for exact details | C |
| 15 | quantity | Unsigned | When the initiator field is set to Firm or Market Maker, the order quantity. <br> When the initiator field is set to Exchange, the total quantity available on the local book at the conclusion of the modification. | R |
| 16 | displayQty | Unsigned | The displayed quantity for this order | R |
| 17 | displayPrice | Price | The displayed price for this order. This must be provided when displayQty is greater than zero. | C |
| 18 | workingPrice | Price | The working price of the order | C |
| 19 | leavesQty | Unsigned | The quantity left open after the modification has occurred. | R |
| 20 | orderType | Choice | The type of order being submitted (e.g., market, limit). See the corresponding entry in the Data Dictionary for more details about order types. | R |
| 21 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values | R |
| 22 | capacity | Choice | See entry for Capacity in the Data Dictionary for acceptable values | R |
| 23 | handlingInstructions | Name/Value Pairs | Defines the handling instructions, as described in Data Dictionary for Handling Instructions. | C |
| 24 | orderAttributes | Name/Value Pairs | Defines reportable attributes of an order, that are not necessarily handling instructions. | C |
| 25 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |

## Equity Order Modified (EOM)

| $\#$ | Field Name | Data Type | Description | Include <br> Key |
| :--- | :--- | :--- | :--- | :--- |
| 26 | routedOrderID | Text (40) | For customer-driven changes to the order, the ID <br> assigned to this order by the routing firm when <br> submitting the modification to the exchange. <br> For the return of unexecuted liquidity previously <br> routed away, optionally provide the exchange- <br> assigned ID used to route the order away. <br> Except as noted above, not required for exchange- <br> driven modifications. <br> This must be provided when initiator is 'Firm' or | C |
| 27 | routingParty |  | Text(8) |  |
| 29 | side | For customer-driven changes to the order, the ID <br> string used to identify the entity that routed this order <br> modification to the exchange. | C |  |
| For the return of unexecuted liquidity previously |  |  |  |  |
| routed away, optionally provide the exchange- |  |  |  |  |
| assigned ID string used to route the order away. |  |  |  |  |
| Should match the value of the EOR event |  |  |  |  |
| routingParty with the same routedOrderID. |  |  |  |  |
| Except as noted above, not required for exchange- |  |  |  |  |
| driven modifications. |  |  |  |  |$\quad$| This must be provided when initiator is 'Firm' or |
| :--- |$\quad$| session |
| :--- |
| 'MarketMaker'. |

## Linkage Keys for EOM:

- Order Key: date, exchange, symbol, orderID
- Previous Order Key: date, exchange, symbol, originalOrderID
- Route Link Key: date, symbol, exchange, routedOrderID, routingParty, session
- Cross Order Key: date, exchange, orderID, pairedOrderld (if pairedOrderld is populated in order attributes name value pair)

### 4.5. Order Adjusted Event

An event must be sent to CAT to report any customer modification to the order. Additionally, an event must be sent to CAT to report any changes to the order due to an exchange action, including updates related to changes in market conditions.

Unlike the EOM, which supports changes to any reportable attribute, the EOJ event supports only changes to the side, price, quantity, working price, display price, and display quantity. Side adjustments are only allowed for same-side changes (e.g., changes between short and long sell).

All other order instructions are assumed to be unchanged.

Table 20: Order Adjusted

| Equity Order Adjusted (EOJ) |  | Include <br> Key |  |  |
| :--- | :--- | :--- | :--- | :--- |
| $\#$ | Field Name | Data Type | Description | R |
| 1 | type | Message Type | EOJ | Exchange ID |
| 2 | exchange | The identifier for the exchange which has modified this <br> order | R |  |
| 3 | eventTimestamp | Timestamp | The date/time at which the modification was received or <br> originated | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the <br> sequence of events when multiple events have the <br> same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol, in either the symbology of the listing <br> exchange or a valid alias | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the <br> exchange | R |
| 8 | originalOrderID | Text (40) | The internal order ID before the modify / replacement <br> created a new order ID. If the order kept its ID through <br> the modification, then this value need not be included | C |

| Equity Order Adjusted (EOJ) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 9 | initiator | Choice | Indicates who initiated the order modification: See entry for "initiator" in the Data Dictionary for acceptable values | R |
| 10 | side | Choice | The side of the order: See entry for "side" in the Data Dictionary for acceptable values. Should be provided for firm or market maker updates to an order. Should be provided for all firm updates to the order even if it hasn't changed from the previous version of the order. <br> This must be provided when initiator is 'Firm' or 'MarketMaker'. | C |
| 11 | price | Price | The limit price of the order, if it changed. This must be provided when orderType indicates a limit order. | C |
| 12 | displayPrice | Price | The displayed price for this order. This must be provided when displayQty is greater than zero. | C |
| 13 | workingPrice | Price | The working price of the order | C |
| 14 | quantity | Unsigned | When the initiator field is set to Firm or Market Maker, the order quantity. <br> When the initiator field is set to Exchange, the total quantity available on the local book at the conclusion of the modification. <br> This must be provided when initiator is 'Firm' or 'MarketMaker'. | C |
| 15 | displayQty | Unsigned | The displayed quantity for this order. This must be provided when displayPrice is provided. | C |
| 16 | leavesQty | Unsigned | The quantity left open after the modification has occurred. | C |
| 17 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |
| 18 | nbbPrice | Price | The NBBO at the moment the order was modified. | R |
| 19 | nbbQty | Unsigned |  | 0 |
| 20 | nboPrice | Price |  | R |
| 21 | nboQty | Unsigned |  | 0 |

| Equity Order Adjusted (EOJ) |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| 22 | Field Name | Data Type | Description | Include <br> Key |
| 23 | routingParty | Text (40) | For customer-driven changes to the order, the ID <br> assigned to this order by the routing firm when <br> submitting the modification to the exchange <br> For the return of unexecuted liquidity previously routed <br> away, optionally provide the exchange-assigned ID <br> used to route the order away <br> Except as noted above, not required for exchange- <br> driven modifications <br> This must be provided when initiator is 'Firm' or <br> 'MarketMaker'. | C |
| 24 | For customer-driven changes to the order, the ID string <br> used to identify the entity that routed this order <br> modification to the exchange. <br> For the return of unexecuted liquidity previously routed <br> away, optionally provide the exchange-assigned ID <br> string used to route the order away. Should match the <br> value of the EOR event routingParty with the same <br> routedOrderID. <br> Except as noted above, not required for exchange-driven <br> modifications. | C |  |  |
| This must be provided when initiator is 'Firm' or <br> 'MarketMaker'. |  |  |  |  |

## Linkage Keys for EOJ:

- Order Key: date, exchange, symbol, orderID
- Previous Order Key: date, exchange, symbol, originalOrderID
- Route Link Key: date, symbol, exchange, routedOrderID, routingParty, session
- Cross Order Key: date, exchange, orderID, pairedOrderld (if pairedOrderld is populated in order attributes name value pair)

### 4.6. Order Canceled Event

When an exchange cancels an order, in part or in whole, the event must be reported to CAT. Note that an explicit Canceled Event is required for every order that is canceled, even orders that have implicit "execute or cancel" instructions like IOC orders.

A Canceled event should be used anytime any part of an order is canceled. For example, an order can be partially reduced either with a cancel message or a modify (cancel/replace) message. If an actual cancel is processed by the exchange, a Canceled event would be reported. If a modify and/or cancel/replace was sent to the exchange, a Modified event would be reported. This keeps the reported event in line with the original intent.

Some protocols only allow full cancels; partial cancels must be accomplished via a cancel/replace. In such cases, partial cancels would always be reported as Modified events.

Table 21: Order Canceled

| \# | Field Name | Data Type | Description | Include <br> Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message <br> Type | EOC | R |
| 2 | exchange | Exchange <br> ID | The ID for the exchange which has canceled this order. | R |
| 3 | eventTimestamp | Timestamp | The date/time at which the cancellation was received or <br> originated. | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the <br> sequence of events when multiple events have the same <br> timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier. | C |
| 6 | symbol | Symbol | The stock symbol, in either the symbology of the listing <br> exchange or a valid alias | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the exchange | R |
| 8 | cancelQty | Unsigned | The quantity being canceled. | R |
| 9 | leavesQty | Unsigned | The quantity left open after the cancel event (zero for a full <br> cancel) | R |
| 10 | initiator | Choice | Indicates who initiated the order cancellation: See entry for <br> "initiator" in the Data Dictionary for acceptable values | R |

| Equity Order Canceled (EOC) |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| \# | Field Name | Data Type | Description | Include <br> Key |
| 11 | cancelReason | Choice | Code representing the reason why the order was canceled. <br> The actual value of the code is exchange specific. See Data <br> Dictionary for the list of allowed values | O |
| 12 | member | Member <br> Alias | The identifier for the member firm that is responsible for the <br> order | R |

## Linkage Keys for EOC:

- Order Key: date, exchange, symbol, orderID

### 4.7. Order Trade Event

All trade events are reported to CAT as two-sided transactions, with a single event.

Each order trade event is represented with the following details. The details in the table Order Trade Side Details must be populated for each side of the trade.

Table 22: Order Trade Events

| Equity Order Trade (EOT) |  | Include <br> Key |  |  |
| :--- | :--- | :--- | :--- | :--- |
| 1 | Field Name | Data Type | Description | R |
| 2 | exchange | Exchange ID | The ID for the exchange on which the trade took place | R |
| 3 | eventTimestamp | Timestamp | The date/time of execution | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the <br> sequence of events when multiple events have the same <br> timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol, in either the symbology of the listing <br> exchange or a valid alias | R |
| 7 | tradeID | Text (40) | This ID will be used when a specific trade needs to be <br> identified, for example in trade break and correction <br> reports. The combination of date, exchange, symbol, and <br> tradeID must be globally unique | R |
| 8 | quantity | Unsigned | Quantity of the trade | R |

|  | Equity Order Trade (EOT) |  | Include <br> Key |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 9 | Field Name | Data Type | Description | R |
| 10 | saleCondition | Text (8) | Conditions under which trade was executed | C |
| 11 | executionCodes | Name/Value <br> Pairs | Describes any execution codes, acceptable values are <br> described in Data Dictionary. These codes apply to both <br> sides of the trade | C |
| 12 | buyDetails | Order Trade <br> Side Details | See Order Trade Side Details table |  |
| 13 | sellDetails | Order Trade <br> Side Details | See Order Trade Side Details table |  |
| 14 | nbbPrice | Price | The national best bid price at the moment the trade <br> occurred | R |
| 15 | nbbQty | Unsigned | The national best bid quantity at the moment the trade <br> occurred | O |
| 16 | nboPrice | Price | The national best offer price at the moment the trade | R |
| 17 | nboQty | Unsigned | The national best offer quantity at the moment the trade <br> occurred | O |

Table 23: Order Trade Side Details

## Equity Order Trade: Side Details

| $\#$ | Field Name | Data Type | Description | Include <br> Key |
| :--- | :--- | :--- | :--- | :--- |
| 12.n.1 / <br> 13.n.1 | side | Choice | The side of the order: See entry for "side" in the Data <br> Dictionary for acceptable values. Not required if there is <br> not order for the side as indicated by the <br> NOBUYID/NOSELLID instruction. <br> This must be provided if orderID is provided. | C |
| 12.n.2 / <br> 13.n.2 | leavesQty | Unsigned | The quantity remaining unfilled after this trade event. <br> Not required if there is no order for the side as indicated <br> by the NOBUYID/NOSELLID instruction. <br> Not required when used in a trade correction | C |

## Equity Order Trade: Side Details

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { 12.n. } 3 / \\ & \text { 13.n. } 3 \end{aligned}$ | orderID | Text (40) | The internal order ID for this side of the trade. <br> This must be provided when, and only when, there is not a NOBUYID/NOSELLID instruction. This must be blank if the NOBUYID/NOSELLID instruction exists. | C |
| $\begin{aligned} & \text { 12.n. } 4 \text { / } \\ & \text { 13.n. } 4 \end{aligned}$ | capacity | Choice | See entry for Capacity in the Data Dictionary for acceptable values. <br> Not required if there is no order for the side as indicated by the NOBUYID/NOSELLID instruction. <br> This must be provided if orderID is provided. | C |
| $\begin{aligned} & \text { 12.n. } 5 / \\ & \text { 13.n. } 5 \end{aligned}$ | clearingNumber | Text (20) | DTCC clearing number for this side of the trade. <br> Not required if there is no order for the side as indicated by the NOBUYID/NOSELLID instruction. <br> This must be provided if orderID is provided. | C |
| $\begin{aligned} & \text { 12.n. } 6 / \\ & \text { 13.n. } 6 \end{aligned}$ | executionCodes | Name/Value Pairs | Describes any execution codes, as described in Data Dictionary for Execution Codes. These codes would only apply only to this side of the trade | C |
| $\begin{aligned} & \text { 12.n. } 7 \text { / } \\ & \text { 13.n. } 7 \end{aligned}$ | liquidityCode | Choice | Specifies if this side of the trade was adding or removing liquidity. See entry for liquidityCode in the Data Dictionary for permitted values. <br> Not required if there is no order for the side as indicated by the NOBUYID/NOSELLID instruction. | C |
| $\begin{aligned} & \text { 12.n. } 8 / \\ & \text { 13.n. } 8 \end{aligned}$ | member | Member Alias | The identifier for the member firm that is responsible for the order on this side of the trade. <br> Not required if there is no order for the side as indicated by the NOBUYID/NOSELLID instruction. <br> This must be provided if orderID is provided. | C |
| $\begin{aligned} & \text { 12.n. } 9 \text { / } \\ & \text { 13.n. } 9 \end{aligned}$ | routedOrderID | Text (40) | For events representing an away trade, the exchangeassigned ID used to route the order away. | 0 |

Linkage Keys for EOT:

- Order Key: date, exchange, symbol, buyDetails.orderID
- Order Key: date, exchange, symbol, sellDetails.orderID
- Trade Key: date, exchange, symbol, tradeID
- Route Link Key: date, symbol, exchange, buyDetails.routedOrderID
- Route Link Key: date, symbol, exchange, sellDetails.routedOrderID

### 4.8. Order Fill Event

When a routed order executes, the routing firm acquires the position. The exchange will report the fill with the order on one side, and the routing firm on the other side.

Table 24: Order Fill Event

| Equity Order Fill (EOF) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 1 | type | Message Type | EOF | R |
| 2 | exchange | Exchange ID | The ID of the exchange reporting the fill to CAT | R |
| 3 | eventTimestamp | Timestamp | The date/time when the fill was processed by the exchange | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | fillid | Text (40) | A unique identifier for the transaction. The combination of reporter, date, symbol, side, and filliD should be unique | R |
| 7 | symbol | Symbol | The symbol of the stock being filled | R |
| 8 | quantity | Unsigned | Quantity of the fill | R |
| 9 | price | Price | Price of the fill | R |
| 10 | leavesQty | Unsigned | The quantity remaining unfilled after this fill event | R |
| 11 | saleCondition | Text (8) | Conditions under which trade was executed | C |
| 12 | orderID | Text (40) | The internal ID of the order | R |
| 13 | side | Choice | Side of the executed trade: for example Buy, Sell or Short. See the entry 'side' in data dictionary for the list of accepted values | R |
| 14 | clearingNumber | Text (20) | DTCC clearing number for this side of the trade | R |
| 15 | contraClearingNumber | Text (20) | DTCC clearing number for contra side of the trade | 0 |
| 16 | executionCodes | Name / Value Pairs | Optional. Can include zero or more execution codes, as described in Data Dictionary for Execution Codes. These codes would only apply only to this side of the trade | C |

Equity Order Fill (EOF)

| $\#$ | Field Name | Data Type | Description | Include <br> Key |
| :--- | :--- | :--- | :--- | :--- |
| 17 | routingParty | Text (8) | The ID string used to identify the entity that received <br> this routed order. This value will be the same as in the <br> Order Route event for the order being filled | R |
| 18 | routedOrderID | Text (40) | The same Order ID that was used when the order was <br> routed away - and will be on the execution report from <br> the routing BD | R |
| 19 | session | Text (40) | The Session ID of the session on which the order was <br> routed to the BD, and will be the same session on <br> which the execution came back from the BD | R |
| 20 | capacity | Choice | See entry for Capacity in the Data Dictionary for <br> acceptable values | R |
| 21 | member | Member <br> Alias | The identifier for the member firm that is responsible <br> for the order being filled | R |

Linkage Keys for EOF:

- Order Key: date, exchange, symbol, orderID
- Fill Key: date, exchange, symbol, filllD
- Route Link Key: date, symbol, exchange, routedOrderID, session, routingParty

### 4.9. Order Cancel Route Event

When an exchange initiates a cancel request on an order it has previously routed away, it must report its intent to cancel, using a Cancel Route Event.

Table 25: Order Cancel Route

| Equity Order Cancel Route (ECR) |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| \# | Field Name | Data Type | Description | Include <br> Key |
| 1 | type | Message <br> Type | ECR | R |
| 2 | exchange | Exchange <br> ID | The ID for the exchange canceling the routed order | R |
| 3 | eventTimestamp | Timestamp | The date/time when the cancel request was sent to the <br> routing firm | R |

## Equity Order Cancel Route (ECR)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol, in either the symbology of the listing exchange or a valid alias | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the exchange | R |
| 8 | routingParty | Text (8) | The ID string used to identify the entity that received this routed order. This value will be the same as in the Order Route event for the order being canceled | R |
| 9 | routedOrderID | Text (40) | The routed ID for the order being canceled - must also match the routedOrderID in the original Order Route message for this order | R |
| 10 | session | Text (40) | The session ID on which the cancel request is being made must also match the session in the original Order Route message for this order | R |
| 11 | desiredLeavesQty | Unsigned | The desired number of shares remaining in the order after the cancel request has been issued. A value of zero indicates a full cancel | R |
| 12 | result | Choice | The result of the cancel request (e.g. acknowledged, rejected, or no response). See the Data Dictionary for the list of allowed values | 0 |
| 13 | resultTimestamp | Timestamp | The date/time the result of cancel request was received, required if the result is ACK (acknowledged) or REJ (rejected) | 0 |
| 14 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |

## Linkage Keys for ECR:

- Order Key: date, exchange, symbol, orderID
- Route Link Key: date, symbol, exchange, routedOrderID, routingParty

### 4.10. Order Modify Route Event

When an exchange initiates a modify or cancel/replace request on an order it has previously routed away, it must report its intent to modify the order, using a Modify Route Event.

If the request does not change the routed order ID, then both routedOrderID and routedOriginalOrderID must be the same.

Table 26: Order Modify Route

| Equity Order Modify Route (EMR) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 1 | type | Message Type | EMR | R |
| 2 | exchange | Exchange ID | The ID for the exchange modifying the routed order | R |
| 3 | eventTimestamp | Timestamp | The date/time when the exchange made the modify request | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol, in either the symbology of the listing exchange or a valid alias | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the exchange | R |
| 8 | routingParty | Text (8) | The ID string used to identify the entity that received this routed order. This value will be the same as in the Order Route event for the order being modified | R |
| 9 | routedOrderID | Text (40) | The new routed ID for the order, which will be used to refer to the routed order after the modification (in FIX, CIOrdID - in OUCH, Replacement Order Token) | R |
| 10 | routedOriginalOrderID | Text (40) | The ID for the order being modified, as sent to the routing broker in the original route message, or the most recent modify message (in FIX OrigCIOrdID, in OUCH Existing Order Token) | R |
| 11 | session | Text (40) | The ID assigned to the session used to send the modify request from the routing broker to the exchange - must also match the session in the original Order Route message for this order | R |
| 12 | price | Price | The limit price of the order, if applicable. This must be provided when orderType indicates a limit order. | C |
| 13 | quantity | Unsigned | The order quantity | R |
| 14 | displayQty | Unsigned | The displayed quantity for this order | R |

## Equity Order Modify Route (EMR)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 15 | orderType | Choice | The type of order being submitted (e.g., market, limit). See the corresponding entry in the Data Dictionary for more details about order types. | R |
| 16 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values. | R |
| 17 | capacity | Choice | See entry for Capacity in the Data Dictionary for the full list of acceptable values | R |
| 18 | handlingInstructions | Name/Value Pairs | Can include zero or more handling instructions, as described in Data Dictionary for Handling Instructions | C |
| 19 | result | Choice | The result of the modify request (e.g. acknowledged, rejected, or no response). See the Data Dictionary for the list of allowed values | 0 |
| 20 | resultTimestamp | Timestamp | The date/time the result of modify request was received, required if the result is ACK (acknowledged) or REJ (rejected) | 0 |
| 21 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |
| 22 | nbbPrice | Price | The national best bid price at the moment the trade occurred | R |
| 23 | nbbQty | Unsigned | The national best bid quantity at the moment the trade occurred | 0 |
| 24 | nboPrice | Price | The national best offer price at the moment the trade occurred | R |
| 25 | nboQty | Unsigned | The national best offer quantity at the moment the trade occurred | 0 |

## Linkage Keys for EMR:

- Order Key: date, exchange, symbol, orderID
- Route Link Key: date, symbol, exchange, routedOrderID, routingParty
- Previous Route Link Key: date, symbol, exchange, routedOriginalOrderID, routingParty

### 4.11. Order Restatement Event

Orders that persist across business days (e.g., GTC orders) must be restated each day before any other activity is reported for that symbol. The restatement is an explicit confirmation that the order is still active
in the reporter's order book, and also provides an opportunity to use per-day unique order IDs for all orders.

The attributes of the order will be restated in terms of the order's current state, after any corporate actions have been processed (e.g., if a $2: 1$ split occurred, the quantity and price would reflect the resulting change).

Table 27: Order Restatement

## Equity Order Restatement (EORS)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 1 | type | Message Type | EORS | R |
| 2 | exchange | Exchange ID | The ID for the exchange which is restating this order | R |
| 3 | eventTimestamp | Timestamp | The date/time when the order was restated by the exchange | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol, in either the symbology of the listing exchange or a valid alias | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the exchange | R |
| 8 | originalOrderDate | Date | The most recent trading day for which the order was active. Note that this may not be the date when the order was originally accepted. If the order has been active for multiple trading days, this field must reference the previous trading day when the order was active | R |
| 9 | originalOrderID | Text (40) | The most recent internal order ID that was assigned to the order before this restatement event. If the order ID has not changed, then orderID and originalOrderID must be equivalent. Note this requirement is different from modification events | R |
| 10 | side | Choice | The side of the order (e.g., Buy, Sell, Short, etc.). See entry for "side" in the Data Dictionary for acceptable values | R |
| 11 | price | Price | The limit price of the order, if applicable. This must be provided when orderType indicates a limit order. | C |
| 12 | quantity | Unsigned | The order quantity, as adjusted for a corporate action, if applicable | R |

## Equity Order Restatement (EORS)

| $\#$ | Field Name | Data Type | Description | Include <br> Key |
| :--- | :--- | :--- | :--- | :--- |
| 13 | displayQty | Unsigned | The displayed quantity for this order | R |
| 14 | displayPrice | Price | The displayed price for this order. This must be provided <br> when displayQty is greater than zero. | C |
| 15 | workingPrice | Price | The working price of the order | C |
| 16 | leavesQty | Unsigned | The quantity of the order that remains open | R |
| 17 | orderType | Choice | The type of order being submitted (e.g., market, limit). See <br> the corresponding entry in the Data Dictionary for more <br> details about order types | R |
| 18 | timeInForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See <br> the Data Dictionary for a complex list of acceptable values. | R |
| 19 | capacity | Choice | See entry for Capacity in the Data Dictionary for acceptable <br> values | R |
| 20 | handlingInstructio <br> ns | Name/Value <br> Pairs | Defines the handling instructions, as described in Data <br> Dictionary for Handling Instructions | C |
| 21 | orderAttributes | Name/Value <br> Pairs | Defines reportable attributes of an order that are not <br> necessarily handling instructions | C |
| 22 | member | Member <br> Alias | The identifier for the member firm that is responsible for the <br> order | R |

## Linkage Keys for EORS:

- Order Key: date, exchange, symbol, orderID
- Previous Order Key: originalOrderDate, exchange, symbol, originalOrderID

### 4.12. Trade Break Event

When a trade is broken, an event is reported to CAT with the appropriate information. Note that CAT adds the event to the history of the order. The broken trade is not removed from the history, as it is something that actually happened and should be recorded.

Table 28: Order Trade Break

| \# | Field Name | Data Type | Description | Include <br> Key |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message Type | ETB | R |
| 2 | exchange | Exchange ID | The ID for the exchange on which the trade took place | R |
| 3 | eventTimestamp | Timestamp | The date/time of the break event | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the <br> sequence of events when multiple events have the same <br> timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol, as reported on the original trade that is <br> being broken | R |
| 7 | tradeDate | Date | The date on which the trade being broken occurred | R |
| 8 | tradeID | Text (40) | The ID for the trade that is being broken. This must match <br> a previously reported trade | R |
| 9 | quantity | Unsigned | If the full quantity is being broken, then this field can be <br> omitted. Otherwise, this represents the quantity of the <br> original trade that is being broken | O |
| 10 | reason | Text (255) | Free format text field, with the reason for the break | O |

## Linkage Keys for ETB:

- Trade Key: tradeDate, exchange, symbol, tradeID

### 4.13. Trade Correction Event

If a trade is corrected in any way, a correction event must be reported to CAT with all details of the trade, after having been corrected.

As with trade breaks, CAT will still keep the original trade, adding the correction to the audit trail of the trade being corrected.

## Table 29: Order Trade Correction

Equity Order Trade Correction (ETC)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 1 | type | Message Type | ETC | R |
| 2 | exchange | Exchange ID | The ID for the exchange on which the trade took place. | R |
| 3 | eventTimestamp | Timestamp | The date/time of correction | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol, in either the symbology of the listing exchange or a valid alias | R |
| 7 | tradelD | Text (40) | This ID for the trade being corrected | R |
| 8 | refTradeID | Text (40) | The trade being referenced. Used to link corrections if trade corrections can assign new identifiers to trades. If included, refTradeID must reference a previously reported trade, or a previously reported trade correction that has a matching tradeID | C |
| 9 | quantity | Unsigned | Quantity of the trade. | R |
| 10 | price | Price | Price of the trade | R |
| 11 | saleCondition | Text (8) | Conditions under which trade was executed | C |
| 12 | executionCodes | Name/Value Pairs | Describes any execution codes, acceptable values are described in Data Dictionary. These codes apply to both sides of the trade | C |
| 13 | executionTimestamp | Timestamp | The date/time of the execution, applicable only when the execution time was corrected | O |
| 14 | buyDetails | Order Trade Side Details | See Order Trade Side Details table 26 | O |
| 15 | sellDetails | Order Trade Side Details | See Order Trade Side Details table 26 | O |
| 16 | reason | Text (255) | Free format text field, with the reason for the correction | O |

## Linkage Keys for ETC:

- Order Key: date, exchange, symbol, buyDetails.orderID
- Order Key: date, exchange, symbol, sellDetails.orderID
- Route Link Key: date, symbol, exchange, buyDetails.routedOrderID
- Route Link Key: date, symbol, exchange, sellDetails.routedOrderID
- Trade Key: date, exchange, symbol, tradeID

### 4.14. Lifecycle Keys

The lifecycle keys for each event are summarized in the following table.

Table 30: Equity Event Lifecycle Keys

| Section | Event | Lifecycle Keys |
| :---: | :---: | :---: |
| 4.1 | Order Accepted | Order Key: date, exchange, symbol, orderID <br> Route Link Key: date, symbol, routingParty, routedOrderID, session, exchange <br> Cross Order Key: date, exchange, orderID, pairedOrderld (if pairedOrderld is populated in order attributes name value pair) |
| 4.2 | Order Route | Order Key: date, exchange, symbol, orderID <br> Route Link Key: date, symbol, exchange, routedOrderID, routingParty |
| 4.3 | Internal Order Route | Order Key: date, exchange, symbol, orderID <br> Route Link Key: date, symbol, exchange, routedOrderID, session, routingParty |
| 4.4 | Order Modified | Order Key: date, exchange, symbol, orderID <br> Previous Order Key: date, exchange, symbol, originalOrderID <br> Route Link Key: date, symbol, exchange, routedOrderID, session, routingParty <br> Cross Order Key: date, exchange, orderID, pairedOrderld (if pairedOrderld is populated in order attributes name value pair) |
| 4.5 | Order Adjusted | Order Key: date, exchange, symbol, orderID <br> Previous Order Key: date, exchange, symbol, originalOrderID <br> Route Link Key: date, symbol, exchange, routedOrderID, session, routingParty <br> Cross Order Key: date, exchange, orderID, pairedOrderld (if pairedOrderld is populated in order attributes name value pair) |
| 4.6 | Order Canceled | Order Key: date, exchange, symbol, orderID |
| 4.7 | Order Trade | Order Key: date, exchange, symbol, buyDetails.orderID <br> Order Key: date, exchange, symbol, sellDetails.orderID <br> Trade Key: date, exchange, symbol, tradeID <br> Route Link Key: date, symbol, exchange, buyDetails.orderID <br> Route Link Key: date, symbol, exchange, sellDetails.orderID |

| Section | Event | Lifecycle Keys |
| :--- | :--- | :--- |
| 4.8 | Order Fill | Order Key: date, exchange, symbol, orderID <br> Route Link Key: date, symbol, exchange, routedOrderID, session, <br> routingParty <br> Fill Key: date, exchange, symbol, fillID |
| 4.9 | Order Cancel Route | Order Key: date, exchange, symbol, orderID <br> Route Link Key: date, symbol, exchange, routedOrderID, routingParty |
| 4.10 | Order Modify Route | Order Key: date, exchange, symbol, orderID <br> Route Link Key: date, symbol, exchange, routedOrderID, routingParty <br> Previous Route Link Key: date, symbol, exchange, routedOriginaIOrderID,, <br> routingParty |
| 4.11 | Order Restatement | Order Key: date, exchange, symbol, orderID <br> Previous Order Key: originalOrderDate, exchange, symbol, originaIOrderID |
| 4.12 | Trade Break | Trade Correction |
| 4.13 | Trade Key: tradeDate, exchange, symbol, tradeID |  |
| Order Key: date, exchange, symbol, buyDetails.orderID |  |  |
| Order Key: date, exchange, symbol, sellDetails.orderID |  |  |
| Route Link Key: date, symbol, exchange, buyDetails.routedOrderID |  |  |
| Route Link Key: date, symbol, exchange, sellDetails.routedOrderID |  |  |
| Trade Key: date, exchange, symbol, tradeID |  |  |

## 5. Events for Options Exchanges

These events are specific for options exchanges.
Table 31: Events for Options Exchanges

| Section | Event | Message Type | Description |
| :---: | :---: | :---: | :---: |
| 5.1.1 | Quote | OQ | A new quote or a quote replacement |
| 5.1.2 | Quote Cancel | OQC | Report when a quote is canceled |
| 5.2.1.1 | Simple Option Order Accepted | OOA | Represents either a stand-alone option series order, or one leg of a complex parent order accepted by an exchange |
| 5.2.1.2 | Complex Option Order Accepted | OCOA | Represents the complex option order accepted by an exchange |
| 5.2.1.3 | Stock Leg Order | OSL | Stock legs are reported individually, with a link to the parent complex order |
| 5.2.2.1 | Option Order Modified | OOM | Modification of a simple option order or an option leg order |
| 5.2.2.2 | Complex Option Order Modified | OCOM | Modification of a complex option order |
| 5.2.2.3 | Stock Leg Modified | OSLM | Modification of a stock leg of a complex option order |
| 5.2.2.4 | Option Order Adjusted | OOJ | Adjustment of a simple option order or an option leg order |
| 5.2.2.5 | Complex Option Order Adjusted | OCOJ | Adjustment of a complex option order |
| 5.2.2.6 | Stock Leg Adjusted | OSLJ | Adjustment of a stock leg of a complex option order |
| 5.2.3 | Option Order Canceled | OOC | Cancellation of a simple option order or a complex option order |
| 5.2.4.2 | Option Route | OOR | Routing all or part of a simple option order, routing two stock legs to be crossed, or routing a stock leg for execution |
| 5.2.4.3 | Complex Option Route | OCOR | Routing of a complex order to an external destination. |
| 5.2.4.4 | Internal Option Route | OIR | Internal route of an option or a leg of a complex option |
| 5.2.4.5 | Internal Complex Option Route | OCIR | Internal route of a complex option |
| 5.2.4.6 | Modify Option Route | OOMR | Modification or cancel/replace request on an option or stock leg order previously routed away, |

| Section | Event | Message Type | Description |
| :--- | :--- | :--- | :--- |
| 5.2 .4 .7 | Option Cancel Route | OOCR | Cancel request on an order that has been previously <br> routed away |
| 5.2 .5 .1 | Simple Option Trade | OT | Two-sided trade report for simple options and option legs |
| 5.2 .5 .2 | Stock Leg Fill | OSLF | One-sided fill of a routed stock leg order |
| 5.2 .6 | Post Trade Allocation | OPTA | In the event of a modified, canceled, or replaced post trade <br> Allocation, the final allocation is reported to CAT. |
| 5.3 | Option Order <br> Restatement | OORS | Restatement for options orders that persist across <br> business days (e.g., GTC orders) |
| 5.4 | Option Trade Break | OTB | OTC |
| 5.5 | Option Trade <br> Correction | When a trade is broken <br> Participant | OFP |
| 5.6 .1 | Complex Option Floor <br> Participant | OCFP is corrected in any way |  |
| 5.6 .2 | Option Return to Floor <br> Participant | ORFP | A floor participant routes a simple option order to a <br> matching engine. |
| matching engine. |  |  |  |

### 5.1. Market Maker Quotes

Quotes issued by market makers (MMs) to options exchanges must be reported to CAT. This section will describe the types of attributes that are used to model quote events, and the types of quote events that should be reported to CAT. CAT supports both one-sided and two-sided quotes.

While some exchanges create quotes and orders the same way, CAT considers them distinct from a reporting perspective, and they must be reported distinctly. First, MMs are exempt from reporting their quotes to CAT (Section 6.4(d)(iii) of the CAT NMS Plan). Instead, the exchange is fully responsible for submitting the quotes they receive from MMs. Second, the MMs must inform the exchange of the time that they sent each quote, so the exchange can report it to CAT along with the quote. Third, quotes require fewer data elements than orders.

Each quote must have a unique Quote ID. Specifically, when a trade occurs with a MM quote on one side, the Quote ID in the trade will identify the exact quote. The combination of Exchange ID, Date, Option ID, and Quote ID should be globally unique.

Furthermore, each quote update must also have a unique Quote ID which is different from the Quote ID for the quote being updated. If the exchange only supports a single quote per MM, the event can be so noted, and the Quote ID for the quote that is being replaced is not necessary. Otherwise, the update must also include the Quote ID for the quote that is being updated/replaced by the new quote.

The exchange must guarantee uniqueness of quote IDs throughout the day.
There are two types of quote events in CAT:

- Quote Event: Used to report a new quote or a quote replacement. When a quote is replaced, the Original Quote ID will identify the quote being replaced, and the Quote ID will provide the new ID for the updated and replaced quote (or note in the event that the market maker can only have one quote active at any given time).
- Quote Cancel: Reported when a quote is canceled.

For block quotes, each quote in the block would be reported to CAT as a separate quote, with a separate unique Quote ID. In such a case, the quote Sent Timestamp would be the same for each quote from the same block because they were all sent at the same time by the MM. However, the combination of Event Timestamp and Event Sequence Number must be unique for each quote.

Similarly, when a bulk cancel is requested, a separate quote cancel event is required for each quote that is canceled by such a request.

On some exchanges, quotes are allowed to be sent before the trading system is ready to process them. For example, there may be an established protocol where the API documents that quotes sent before a particular time are ignored. Or, a protocol may send a "Now Accepting Quotes" message to market makers, and any quotes sent before that time are ignored. In such cases, those ignored quotes are not processed, so they should not be reported to CAT.

Note that all pre-open quotes are still reportable to CAT. This exception is explicitly for those cases where the exchange allows quotes to be sent before they are officially accepted - but those quotes are neither processed, nor entered into the book, nor accepted for participating in the opening nor any other trading session.

Once the system has started accepting quotes (either because a set time has arrived, or it has sent out a message indicating that quotes are now being accepted), then all quotes must be reported. CAT does not have rules in place for when exchanges start accepting quotes, but it seems that all exchanges start accepting quotes at least five minutes before the start of trading.

For example, in the following diagram, an exchange ignores quotes until they send their "Now Accepting Quotes" message. Thereafter all quotes are processed and reported to CAT.

Figure 3: Accepted Quotes Processing

Similarly, if a quote is rejected and neither accepted nor booked, then the quote should not be reported to CAT.

### 5.1.1.Quote Event

The following data elements are to be reported with all quote events. For two-sided quotes, all bid/ask/price/qty values are required. For one-sided quotes, both the price and quantity fields are required, but only for one side.

Table 32: Quote Events

| Option Quote (OQ) |  | Include <br> Key |  |  |
| :--- | :--- | :--- | :--- | :--- |
| \# | Field Name | Data Type | Description | R |
| 1 | type | Message Type | OQ | Exchange ID |
| 2 | exchange | The identifier for the exchange that received this <br> quote | R |  |
| 3 | eventTimestamp | Timestamp | The date/time when the quote was received by the <br> exchange | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify <br> the sequence of events when multiple events have <br> the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier |  |
| 6 | marketMaker | Member Alias | The Member Alias assigned by the SRO to identify <br> the market maker issuing the quote. In the case <br> where a market maker has multiple users (e.g., <br> acronyms used to differentiate users within the | R |

| Option Quote (OQ) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
|  |  |  | same MM), there would be a separate Member Alias given to each user or sub-account |  |
| 7 | sentTimestamp | Timestamp | The date/time when the market maker sent the quote to the exchange. <br> Must be populated unless quote record was generated by an exchange system and was not received systematically from a Market Maker. | C |
| 8 | optionID | Text (40) | The ID previously assigned to this option in the reporter's option directory | R |
| 9 | quoteID | Text (40) | When onlyOneQuote=True, the unique identifier assigned to this quote by the exchange. If an askQuoteID value is also provided, then this value will only be applied to the bid side of the quote. <br> When onlyOneQuote=False, the unique identifier assigned to the bid. To provide a unique identifier for an ask, use the askQuoteID field. <br> When onlyOneQuote=False, this field must be populated when bidPrice is populated. | C |
| 10 | onlyOneQuote | Boolean | True if the system allows only one quote per OptionID for this market maker; false otherwise | R |
| 11 | originalQuoteID | Text (40) | When onlyOneQuote=False, this field must be populated when the bid from this record replaces a previously submitted bid. This field must not be provided for a bid that does not replace a previous bid, and it should never be populated for an ask. When onlyOneQuote=True no value is necessary for this field. | C |
| 12 | bidPrice | Price | The price being bid for the option (can be zero in two-sided quote which supports spread quotes in low prices names). <br> When onlyOneQuote=False, this field must be populated when quoteID is populated. <br> At least one of bidPrice and askPrice must be provided. | C |
| 13 | bidQty | Unsigned | The quantity being bid for the option (can be zero in two-sided quote which supports spread quotes in low prices names) | C |
| 14 | askPrice | Price | The price being asked for the option. <br> When onlyOneQuote=False, this field must be populated when askQuoteID is populated. <br> At least one of bidPrice and askPrice must be provided. | C |

| Option Quote (OQ) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 15 | askQty | Unsigned | The quantity being asked for the option | C |
| 16 | bidDisplayPrice | Price | The display price being bid for the option (can be zero in two-sided quote which supports spread quotes in low prices names) | C |
| 17 | bidDisplayQty | Unsigned | The display quantity being bid for the option (can be zero in two-sided quote which supports spread quotes in low prices names) | C |
| 18 | askDisplayPrice | Price | The display price being asked for the option | C |
| 19 | askDisplayQty | Unsigned | The display quantity being asked for the option | C |
| 20 | cycleDate | Date | Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date ( $\mathrm{T}+1$ ) must set the Cycle Date equal to $\mathrm{T}+1$. <br> The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.) | C |
| 21 | askQuoteID | Text (40) | When onlyOneQuote=True, the unique identifier assigned to the ask by the exchange. If this field is populated, then the quoteID value will only be applied to the bid. <br> When onlyOneQuote=False, the unique identifier assigned to the ask. To provide a unique identifier for a bid, use the quoteID field. <br> If this field is populated, then the askPrice must also be populated. | C |
| 22 | originalAskQuoteID | Text (40) | When onlyOneQuote=False, this field must be populated when the ask from this record replaces a previously submitted ask. This field must not be provided for an ask that does not replace a previous | C |

| Option Quote (OQ) |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| \# | Field Name | Data Type | Description | Include <br> Key |
|  |  |  | ask, and it should never be populated for a bid. <br> When only(OneQuote=True no value is necessary <br> for this field. |  |
| 23 | initiator | Choice | Specifies who initiated the quote: the market maker <br> or exchange | O |

## Linkage Keys for OQ:

- Quote Key: date, exchange, optionID, quoteID, askQuoteID
- Previous Quote Key: date, exchange, optionID, originalQuoteID, originalAskQuoteID

### 5.1.2.Quote Cancel Event

The following data elements are required for cancel quote events.
Table 33: Quote Cancel Events

| Option Quote Cancel (OQC) |  | Include Key |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| \# | Field Name | Data Type | Description | R |  |
| 1 | type | Message Type | OQC | Exchange ID | The identifier for the exchange processing the quote <br> cancel |
| 2 | exchange | eventTimestamp | Timestamp | The date/time when the quote cancel occurred | R |
| 3 | sequenceNumber | Unsigned | The sequence number of the event, used to identify <br> the sequence of events when multiple events have <br> the same timestamps | C |  |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |  |
| 6 | marketMaker | Member Alias | The Member Alias assigned by the SRO to identify <br> the market maker issuing the quote cancel. In the <br> case where a market maker has multiple users (e.g., <br> acronyms used to differentiate users within the same <br> MM), there would be a separate Member Alias given <br> to each user or sub-account | R |  |
| 7 | sentTimestamp | Timestamp | The date/time when the market maker sent the quote <br> cancel to the exchange. This field is only required if <br> the cancel initiator is the market maker | C |  |
| 8 | optionID | Text (40) | The ID previously assigned to this option in the <br> reporter's option directory | R |  |

## Option Quote Cancel (OQC)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 9 | quoteID | Text (40) | The unique identifier assigned to this quote to be canceled by the exchange. This field can be omitted if onlyOneQuote is true <br> If onlyOneQuote=False, then this field will only be used to cancel bids. To cancel an ask, provide the relevant identifier in the askQuoteID field. | C |
| 10 | onlyOneQuote | Boolean | True if the system allows only one quote for this market maker; false otherwise | R |
| 11 | initiator | Choice | Specifies who initiated the cancel: the market maker or exchange | R |
| 12 | cancelReason | Choice | This code represents the reason why the quote was canceled. The actual value of the code is exchange specific. See Data Dictionary for the list of allowed values | 0 |
| 13 | cycleDate | Date | Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date ( $\mathrm{T}+1$ ) must set the Cycle Date equal to $\mathrm{T}+1$. <br> The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.) | C |
| 14 | askQuoteID | Text (40) | The unique identifier assigned to cancel the ask to be canceled by the exchange. This field can be omitted if onlyOneQuote is true. <br> If onlyOneQuote=False, then this field will only be used to cancel asks. To cancel a bid, provide the relevant identifier in the quoteID field. | C |

## Linkage Keys for OQC:

- Quote Key: date, exchange, optionID, quoteID, askQuoteID

### 5.2. Options Orders

Order events for options are reported as either simple or complex. Simple option orders are orders for a single option series (including flex options). Complex option orders contain two or more simple option orders, or at least one each of a simple option order and equity order.

For CAT, an order for a complex option will be reported at the parent complex level, and additional orders will be reported if/when orders are created for each leg. Some exchanges create leg order reporting events as soon as the parent is created, and other exchanges create leg order reporting events only when an execution is created. CAT supports both reporting scenarios. In the latter case, when no leg executions occur, it is possible that no leg-level order events are generated.

Each options order routed to (and then accepted by) an exchange must be reported to CAT. Options orders that are routed to an exchange and then rejected by the exchange are not reportable by the exchange. When an exchange accepts an options order, it must report either a single Option Order Accepted event, or a single Complex Option Order Accepted event followed by one Accepted event for each leg of the complex option.

For manual/floor trades, this will be the identifier for the physical broker. For quotes, it will be an alias for the market maker behind the quote. For system trades, it will be an alias for the system handling that order.

### 5.2.1.Order Accepted Events

### 5.2.1.1. Simple Option Order Accepted Event

A simple option order can represent either a stand-alone option series, or one leg of a complex parent order. If the order represents a leg of a complex order, then the field Complex Order ID will be set to the Order ID of the parent complex order. If necessary, the event timestamp and sequence number could be the same as those in the parent complex order.

Fields marked with a lower-case 'r' are required if the event represents a normal option order, and they are conditional if the event represents a leg of a complex order.

Table 34: Simple Option Order Accepted Event

Simple Option Order Accepted (OOA)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message Type | OOA | R |

## Simple Option Order Accepted (OOA)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 2 | exchange | Exchange ID | The identifier for the exchange which has received this order | R |
| 3 | eventTimestamp | Timestamp | The date/time of order receipt | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | optionID | Text (40) | The ID previously assigned to this option in the reporter's option directory | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the exchange | R |
| 8 | routingParty | Text (8) | The ID string used to identify the entity that sent this routed order. <br> This must be provided for simple options (i.e. complexOrderID is null). Leave unset if the option is a leg of a complex order. | C |
| 9 | routedOrderID | Text (40) | The ID assigned to this order by the client when submitting the order to the exchange. <br> This must be provided for simple options (i.e. complexOrderID is null). Leave unset if the option is a leg of a complex order. | C |
| 10 | session | Text (40) | The name of the session used to send the order from the routing member firm to the exchange. <br> This must be provided for simple options (i.e. complexOrderID is null). Leave unset if the option is a leg of a complex order | C |
| 11 | side | Choice | The side of the order: See entry for "side" in the Data Dictionary for acceptable values | R |
| 12 | price | Price | The limit price of the order, if applicable. This must be provided when orderType indicates a limit order. | C |
| 13 | quantity | Unsigned | The order quantity | r |
| 14 | displayQty | Unsigned | The displayed quantity for this order | r |
| 15 | displayPrice | Price | The displayed price for this order. This must be provided on simple option orders (i.e. complexOrderID is null) when displayQty is greater than zero. | C |
| 16 | workingPrice | Price | The working price of the order at the time it was accepted. Note that Modified events must be | C |

## Simple Option Order Accepted (OOA)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | reported to CAT anytime the working price changes |  |
| 17 | openCloseIndicator | Choice | the position of the order: either Open, Close, or Unspecified | R |
| 18 | orderType | Choice | The order type is one of several possible predefined order types. There are a few general order type codes, and several codes unique for each exchange. See the corresponding entry in the Data Dictionary for more details about order types. | R |
| 19 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values | r |
| 20 | handlingInstructions | Name / Value Pairs | The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details | C |
| 21 | orderAttributes | Name/Value Pairs | Defines reportable attributes of an order, that are not necessarily handling instructions | C |
| 22 | exchOriginCode | Choice | Exchange defined code designating the origin of the order, see data dictionary for list of acceptable values | r |
| 23 | coverage | Choice | Specifies whether the order is covered or uncovered. This field may also be filled in as unspecified. See the data dictionary for a list of acceptable values | r |
| 24 | executingFirm | Alphanumeric(8) | The OCC number of the executing/give-up firm | r |
| 25 | cmtaFirm | Alphanumeric(8) | The OCC number of the CMTA firm (only valid for CMTA trades) | C |
| 26 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |
| 27 | mktMkrSubAccount | Text (20) | The sub-account for the market maker, only valid when Origin Code is Market Maker | C |
| 28 | nbbPrice | Price | The NBBO at the moment just before accepting this order. | R |
| 29 | nbbQty | Unsigned |  | 0 |
| 30 | nboPrice | Price |  | R |
| 31 | nboQty | Unsigned |  | 0 |
| 32 | complexOrderID | Text (40) | The Order ID for the parent complex order, if this order represents a leg of a complex order. <br> This must be provided if the order represents a leg | C |

## Simple Option Order Accepted (OOA)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 33 | complexOptionID | Text (40) | The optionID for the parent complex order, if this <br> order represents a leg of a complex order. Not <br> reported if the complex order's orderID is globally <br> unique | C |
| 34 | cycleDate | Date | Set equal to the US business date upon which the <br> daily trading cycle of an event ends. A trading cycle <br> may include more than one trading session. In <br> global trading scenarios, the trading cycle of an <br> order may span multiple dates due to the CAT <br> requirement for representing all event timestamps <br> in Eastern Time as well as the occurrence of US <br> Holidays. <br> An event that occurs on a Global Market where the <br> Eastern Time equivalent is a non-US business date <br> including a holiday or weekend must set the Cycle <br> Date equal to the next US business date. And an <br> event that occurs on a Global Market where the <br> Eastern Time equivalent is a US business date (T) <br> where subsequent events for that event may occur <br> on the next Eastern Time equivalent US business <br> date (T+1) must set the Cycle Date equal to T+1. |  |

## Linkage Keys for OOA:

- Order Key: date, exchange, optionID, orderID
- Cross Order Key: date, exchange, orderID, pairedOrderld (if populated in order attributes name value pair)
- Route Link Key: date, optionID, routingParty, routedOrderID, session, exchange
- Complex Order Key: date, exchange, [complexOptionID,] complexOrderID

### 5.2.1.2. Complex Option Order Accepted Event

Each complex option order routed to (and accepted by) an exchange must be reported to CAT. CAT allows each leg of a complex order to be reported separately, thus the parent order is relatively small with most order details reported on behalf of each leg. If possible, exchanges should report leg events for all complex orders whether or not the complex order executes. Leg events must be reported for all legs for all executed complex orders.

The number of legs, and description of each leg is encapsulated in the dictionary entry for the Option ID. In addition to the Complex Order Accepted event, at least one Option Order Accepted event must be submitted for each leg of a complex order (Stock Leg Order Accepted for non-option legs).

Some systems allow individual legs to carry specific instructions. Thus, order type information is relevant on a per-leg basis, and not reported for the complex parent itself. Furthermore, some exchange don't ever create leg orders within the trading system. Instead they create synthetic leg order events for CAT reporting purposes at the time of execution. For these exchanges, the execution triggers the leg level order accept events, so for complex orders that are canceled without executions there will not be any leg order events. Thus, the model supports both processes, where leg orders can be created upon initial acceptance and at the point of execution.

When a leg order is created, each leg must have a unique internal Order ID. Some reporters already create such derived order representations, so these IDs are easy to acquire. Others do not assign identifiers to legs. However, all reporters will be expected to report individual order events for each leg that is executed. One suggested method for creating unique leg Order IDs is to use the Order ID of the parent complex order, combined with the leg number (its ordering in the complex option definition). Another is to combine the Complex Order ID with the Option ID and Side of that leg.

Qualified Contingent Cross orders are not exposed to other market participants, and require special handling on some exchanges. In certain cases, these orders may only be processed as individual leg orders and no Complex Option Order Accepted event is reported.

Note that the following fields are conditional in this event. If they are present, then they do not have to appear in the individual order events for option legs, unless the value for a leg would be different from the value in the complex order. In other words, these field values apply to all option legs, unless the option leg contains a different value. If these fields are missing, then the data must be present in each option leg.
coverage, exchoriginCode, executingFirm, cmtaFirm, mktMkrSubAccount

Table 35: Complex Option Order Accepted Event

Complex Option Order Accepted (OCOA)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message Type | OCOA | R |
| 2 | exchange | Exchange ID | The identifier for the exchange which has received <br> this order | R |

Complex Option Order Accepted (OCOA)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 3 | eventTimestamp | Timestamp | The date/time of order receipt | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | optionID | Text (40) | The ID previously assigned to this option in the reporter's option directory | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the complex order by the exchange | R |
| 8 | side | Choice | The side of the order, for a complex order the values for side can be either "AsDirected" or "Opposite", see entry for "Side" in the Data Dictionary for acceptable values | R |
| 9 | routingParty | Text (8) | The ID string used to identify the entity that sent this routed order | R |
| 10 | routedOrderID | Text (40) | The ID assigned to this order by the routing firm when submitting the order to the exchange | R |
| 11 | session | Text (40) | The name of the session used to send the order from the routing member firm to the exchange | R |
| 12 | price | Price | the net price of the order, which may be negative | C |
| 13 | quantity | Unsigned | the order quantity | R |
| 14 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values | R |
| 15 | handlingInstructions | Name / Value Pairs | The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details | C |
| 16 | orderAttributes | Name/Value Pairs | Defines reportable attributes of an order, that are not necessarily handling instructions | C |
| 17 | isGloballyUnique | Boolean | If reported with a value of true, then the orderID is globally unique across all optionIDs for this exchange/date. This means that no other complex order can have the same orderID. Furthermore, leg events for this complex order must be reported with just the complexOrderID and not the complexOptionID | 0 |
| 18 | member | Member Alias | The identifier for the member firm that is | R |

## Complex Option Order Accepted (OCOA)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | responsible for the order |  |
| 19 | exchOriginCode | Choice | Exchange defined code designating the origin of the order, see data dictionary for list of acceptable values | C |
| 20 | coverage | Choice | Specifies whether the order is covered or uncovered. This field may also be filled in as unspecified. See the data dictionary for a list of acceptable values | C |
| 21 | executingFirm | Alphanumeric(8) | The OCC number of the executing/give-up firm | C |
| 22 | cmtaFirm | Alphanumeric(8) | The OCC number of the CMTA firm (only valid for CMTA trades) | C |
| 23 | mktMkrSubAccount | Text (20) | The sub-account for the market maker, only valid when Origin Code is Market Maker | C |
| 24 | cycleDate | Date | Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date ( $T$ ) where subsequent events for that event may occur on the next Eastern Time equivalent US business date $(T+1)$ must set the Cycle Date equal to $T+1$. <br> The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and $\mathrm{T}+1$, inclusive. (Where $\mathrm{T}+1$ means Trade Date plus the next Trade Date.) | C |

## Linkage Keys for OCOA:

- Order Key: date, exchange, optionID, orderID (if isGloballyUnique is false)
- Order Key: date, exchange, orderID (if isGloballyUnique is true)
- Cross Order Key: date, exchange, optionID, orderID, pairedOrderld (if pairedOrderld is populated in order attributes name value pair and isGloballyUnique is false)
- Cross Order Key: date, exchange, orderID, pairedOrderld (if pariedOrderld is populated in order attributes name value pair and isGloballyUnique is true)
- Route Link Key: date, optionID, routingParty, routedOrderID, session, exchange

### 5.2.1.3. Stock Leg Order Event

Similar to option legs, stock legs are reported individually, with a link to the parent complex order. If necessary, the event timestamp and sequence number could be the same as those in the parent complex order.

See the explanation about leg Order IDs in the section on complex orders. The same process applies to Order IDs for stock legs.

Table 36: Stock Leg Event

| Option Stock Leg (OSL) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 1 | type | Message Type | OSL | R |
| 2 | exchange | Exchange ID | The identifier for the exchange which has accepted this order | R |
| 3 | eventTimestamp | Timestamp | The date/time of order receipt | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol, in either the symbology of the listing exchange or a valid alias | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the exchange | R |
| 8 | side | Choice | The side of the order: See entry for "Side" in the Data Dictionary for acceptable values | R |
| 9 | price | Price | the limit price of the order, if applicable | C |
| 10 | quantity | Unsigned | the order quantity | R |
| 11 | displayQty | Unsigned | the displayed quantity for this order | R |
| 12 | orderType | Choice | The order type is one of several possible pre-defined order types. There are a few general order type codes, and several codes unique for each exchange. See the corresponding entry in the Data Dictionary for more details about order types | R |
| 13 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, | R |

| Option Stock Leg (OSL) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |

|  |  |  | next Trade Date.) |  |  |  |  |

Linkage Keys for OSL:

- Order Key: date, exchange, symbol, orderID
- Complex Order Key: date, exchange, [complexOptionID,] complexOrderID

### 5.2.2.Order Modified Events

An event must be sent to CAT to report any customer modification to the order. Additionally, an event must be sent to CAT to report any changes to the order due to an exchange action, including updates related to changes in market conditions.

Events that should be reported include, but are not limited to:

- Any customer update that passes validation and is successfully processed by the trading system
- Changes to the available quantity of the order, such as liquidity returning from an away market unexecuted
- Changes to the working price, display price, or display quantity
- Changes to the executability of an order, such as when a regular-hours order arrived prior to the opening time and it is now the opening time or when an order expires but no explicit cancellation is provided

### 5.2.2.1. Option Order Modified Event

This event supports all possible modifications to a simple option order and the legs of multi-leg orders. The full state of the order should be reported, including fields that did not change as a result of the modification.

Table 37: Option Order Modified Event

| Option Order Modified (OOM) |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| $\#$ | Field Name | Data Type | Description | Include Key |
| 1 | type | Message Type | OOM | R |
| 2 | exchange | Exchange ID | The identifier for the exchange which has received <br> this order | R |

| Option Order Modified (OOM) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 3 | eventTimestamp | Timestamp | The date/time at which the modification was received or originated | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | optionID | Text (40) | The ID previously assigned to this option in the reporter's option directory | R |
| 7 | orderID | Text (40) | The internal order ID used by the exchange to refer to this order from this point forward | R |
| 8 | coverage | Choice | Specifies whether the order is covered or uncovered. This field may also be filled in as unspecified. See the data dictionary for a list of acceptable values | R |
| 9 | originalOrderID | Text (40) | The internal order ID that used to be assigned to this order until this modification happened. If the order kept its ID through the modification, then this value need not be included | C |
| 10 | initiator | Choice | Indicates who initiated the order modification: See entry for "initiator" in the Data Dictionary for acceptable values | R |
| 11 | nbbPrice | Price | The NBBO at the moment the modification took | R |
| 12 | nbbQty | Unsigned |  | 0 |
| 13 | nboPrice | Price |  | R |
| 14 | nboQty | Unsigned |  | 0 |
| 15 | price | Price | The limit price of the order, if applicable. This must be provided when orderType indicates a limit order. | C |
| 16 | Quantity | Unsigned | When the initiator field is set to Firm or Market Maker, the order quantity. Conditional if the order represents a leg of a complex order; otherwise Required. <br> When the initiator field is set to Exchange, the total quantity available on the local book at the conclusion of the modification. <br> This must be provided for simple option orders (i.e. complexOrderID is null) when initiator is 'Firm' or 'MarketMaker'. | C |
| 17 | leavesQty | Unsigned | The quantity left open after the modification has | R |

Option Order Modified (OOM)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | occurred |  |
| 18 | displayQty | Unsigned | The displayed quantity for this order. This must be provided for simple option orders (i.e. complexOrderID is null). Conditional if the order represents a leg of a complex order. | C |
| 19 | displayPrice | Price | The displayed price for this order. <br> This must be provided on simple option orders (i.e. complexOrderID is null) when displayQty is greater than zero. | C |
| 20 | workingPrice | Price | The working price of the order | C |
| 21 | openCloselndicator | Choice | the position of the order: either Open, Close, or Unspecified | R |
| 22 | orderType | Choice | The order type is one of several possible predefined order types. There are a few general order type codes, and several codes unique for each exchange. See the corresponding entry in the Data Dictionary for more details about order types. | R |
| 23 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values. This must be provided for simple option orders (i.e. complexOrderID is null). Conditional if the order represents a leg of a complex order. | C |
| 24 | handlinglnstructions | Name / Value Pairs | The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details | C |
| 25 | orderAttributes | Name/Value Pairs | Defines reportable attributes of an order that are not necessarily handling instructions | C |
| 26 | exchOriginCode | Choice | Exchange defined code designating the origin of the order, see data dictionary for list of acceptable values | R |
| 27 | executingFirm | Alphanumeric <br> (8) | The OCC number of the executing/give-up firm | R |
| 28 | cmtaFirm | Alphanumeric <br> (8) | The OCC number of the CMTA firm (only valid for CMTA trades) | C |
| 29 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |
| 30 | mktMkrSubAccount | Text (20) | The sub-account for the market maker, only valid when Origin Code is Market Maker | C |

## Option Order Modified (OOM)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 31 | complexOrderID | Text (40) | The Order ID for the parent complex order, if this <br> order represents a leg of a complex order. If the ID <br> for the complex order also changed, then this <br> would be the new Order ID for the complex order. <br> This must be provided if the order represents a leg <br> of a complex order. | C |
| 32 | complexOptionID | Text (40) | The optionID for the parent complex order, if this <br> order represents a leg of a complex order. Not <br> reported if the complex order's orderID is globally <br> unique | C |
| routedOrderID | Text (40) | For customer-driven changes to the order, the ID <br> assigned to this order by the routing firm when <br> submitting the modification to the exchange. <br> For the return of unexecuted liquidity previously <br> routed away, the exchange-assigned ID used to <br> route the order away. <br> Except as noted above, not required for exchange- <br> driven modifications. <br> This must be provided for simple option orders (i.e. <br> complexOrderID is null). | C |  |
| 34 | cycleDate |  | Date |  |
| side |  | Choice |  | The side of the order. See entry for "side" in the <br> Data Dictionary for acceptable values. Should be <br> provided for firm or market maker updates to an <br> order. Should be reported even if has not <br> changed from the prior version of the order. <br> This must be provided when initiator is 'Firm' or <br> 'MarketMaker'. |

## Option Order Modified (OOM)

| \# | Field Name | Data Type | Description <br> lycle Date must be between the Event Date and <br> T+1, inclusive. (Where T+1 means Trade Date plus <br> the next Trade Date.) | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 36 | routingParty | Text(8) | For customer-driven changes to the order, the ID <br> string used to identify the entity that routed this <br> order modification to the exchange. <br> For the return of unexecuted liquidity previously <br> routed away, optionally provide the exchange- <br> assigned ID string used to route the order away. <br> Should match the value of the OOR event <br> routingParty with the same routedOrderID. <br> Except as noted above, not required for exchange- <br> driven modifications. | C |
| 37 | session | Text(40) | For customer-driven changes to the order, the ID <br> assigned to the specific session that the routing <br> member used to route the order to the exchange. <br> For the return of unexecuted liquidity previously <br> routed away, optionally provide the exchange- <br> assigned ID used to route the order away. Should <br> match the value of the OOR event session with the <br> same routedOrderID. <br> Except as noted above, not required for exchange- <br> driven modifications. | C |

## Linkage Keys for OOM:

- Order Key: date, exchange, optionID, orderID
- Cross Order Key: date, exchange, orderID, pairedOrderld (if pairedOrderld is populated in order attributes name value pair)
- Previous Order Key: date, exchange, optionID, originalOrderID
- Complex Order Key: date, exchange, [complexOptionID,] complexOrderID

### 5.2.2.2. Complex Option Order Modified Event

If the price or quantity changes on a complex order, a complex option order modified event needs to be submitted to CAT. If a change to the parent complex order causes attributes in the leg orders to change, then Order Modified events must be reported for each affected leg. Note that this only applies if a leg order actually exists at the time of the modification to the complex order. For exchanges that create leg orders at execution, only the complex order needs to be modified. However, if a change in net price to the complex order causes the price of the leg orders to change, changes to the leg order prices are not reportable to CAT.

If the internal order ID of the complex order changes, then modified reports must be generated for every leg that exists at the time of the modification, referencing the new order ID of the parent complex order.

The full state of the modified order must be reported, including fields that did not change value as a result of the modification.

Table 38: Complex Option Order Modified Event

Complex Option Order Modified (OCOM)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 1 | type | Message Type | OCOM | R |
| 2 | exchange | Exchange ID | The identifier for the exchange which has received this order | R |
| 3 | eventTimestamp | Timestamp | The date/time at which the modification was received or originated | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | optionID | Text (40) | The ID previously assigned to this option in the reporter's option directory | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the complex order by the exchange | R |
| 8 | originalOrderID | Text (40) | The internal order ID that used to be assigned to this order until this modification happened. If the order kept its ID through the modification, then this value need not be included | C |
| 9 | initiator | Choice | Indicates who initiated the order modification: See entry for "initiator" in the Data Dictionary for acceptable values | R |
| 10 | price | Price | The net price of the order, which may be negative | C |
| 11 | quantity | Unsigned | The order quantity | R |
| 12 | leavesQty | Unsigned | The quantity left open after the modification has occurred | R |
| 13 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values | R |
| 14 | handlinglnstructions | Name / Value Pairs | The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation | C |

## Complex Option Order Modified (OCOM)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | in the Data Dictionary for more details |  |
| 15 | orderAttributes | Name/Value Pairs | Defines reportable attributes of an order that are not necessarily handling instructions | C |
| 16 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |
| 17 | routedOrderID | Text (40) | For customer-driven changes to the order, the ID assigned to this order by the routing firm when submitting the modification to the exchange. <br> For the return of unexecuted liquidity previously routed away, the exchange-assigned ID used to route the order away. <br> Except as noted above, not required for exchangedriven modifications | C |
| 18 | cycleDate | Date | Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date $(\mathrm{T}+1)$ must set the Cycle Date equal to $\mathrm{T}+1$. <br> The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and $\mathrm{T}+1$, inclusive. (Where $\mathrm{T}+1$ means Trade Date plus the next Trade Date.) | C |
| 19 | side | Choice | The side of the order: See entry for "side" in the Data Dictionary for acceptable values. Should be provided for firm or market maker updates to an order. Should be reported even if it has not changed from the prior version of the order. | C |
| 20 | routingParty | Text(8) | For customer-driven changes to the order, the ID string used to identify the entity that routed this order modification to the exchange. | C |

Complex Option Order Modified (OCOM)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  | For the return of unexecuted liquidity previously <br> routed away, optionally provide the exchange- <br> assigned ID string used to route the order away. <br> Should match the value of the OOR event <br> routingParty with the same routedOrderID. <br> Except as noted above, not required for exchange- <br> driven modifications. |  |
| 21 | session | Text(40) | For customer-driven changes to the order, the ID <br> assigned to the specific session that the routing <br> member used to route the order to the exchange. <br> For the return of unexecuted liquidity previously <br> routed away, optionally provide the exchange- <br> assigned ID used to route the order away. Should <br> match the value of the OOR event session with the <br> same routedOrderID. <br> Except as noted above, not required for exchange- <br> driven modifications. | C |

## Linkage Keys for OCOM:

- Order Key: date, exchange, optionID, orderID
- Cross Order Key: date, exchange, orderID, pairedOrderld (if pariedOrderld is populated in order attributes name value pair)
- Route Link Key: date, optionID, routedOrderID, exchange, routingParty, session
- Previous Order Key: date, exchange, optionID, originalOrderID

### 5.2.2.3. Stock Leg Modified Event

When a stock leg is modified, an event must be reported to CAT with the modified data elements. The full state of the modified order must be reported, including fields that did not change value as a result of the modification.

Table 39: Stock Leg Modified Event

| Option Stock Leg Modified |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| $\#$ | FieId Name | Data Type | Description | Include Key |
| 1 | type | Message Type | OSLM | R |
| 2 | exchange | Exchange ID | The identifier for the exchange which has accepted <br> this order | R |
| 3 | eventTimestamp | Timestamp | The date/time at which the modification was received | R |

## Option Stock Leg Modified

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  | or originated |  |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify <br> the sequence of events when multiple events have <br> the same timestamps | C |
| 5 | seqNumSub | Text(10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol, in either the symbology of the <br> listing exchange or a valid alias | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the <br> exchange | R |
| 8 | originalOrderID | Text (40) | The internal order ID that used to be assigned to this <br> order until this modification happened. If the order <br> kept its ID through the modification, then this value <br> need not be included | C |
| 9 | initiator | Choice | Indicates who initiated the order modification: See <br> entry for "initiator" in the Data Dictionary for <br> acceptable values | R |
| 10 | nbbPrice | Price | The NBBO at the moment the stock leg was <br> modified. | R |
| 11 | nbbQty | Unsigned | Price | Unsigned |

## Option Stock Leg Modified

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 21 | orderType | Choice | The order type is one of several possible pre-defined <br> order types. There are a few general order type <br> codes, and several codes unique for each exchange. <br> See the corresponding entry in the Data Dictionary <br> for more details about order types | R |
| 22 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, <br> GTC). See the Data Dictionary for a complex list of <br> acceptable values | R |
| 23 | handlingInstructions | Name / Value <br> Pairs | The handling instructions field contains one or more <br> instruction codes from the pre-defined list of order <br> handling instructions. See the documentation in the <br> Data Dictionary for more details | C |
| 24 | orderAttributes | Name/Value <br> Pairs | Defines reportable attributes of an order that are not <br> necessarily handling instructions | C |
| 26 | clearingFirm | Text (10) | member | Member Alias |
| Firm receiving the stock execution | The identifier for the member firm that is responsible <br> for the order. This is the same member as in the <br> complex order | R |  |  |
| cycleDate | Date |  | Set equal to the US business date upon which the <br> daily trading cycle of an event ends. A trading cycle <br> may include more than one trading session. In global <br> trading scenarios, the trading cycle of an order may <br> span multiple dates due to the CAT requirement for <br> representing all event timestamps in Eastern Time as <br> well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the <br> Eastern Time equivalent is a non-US business date <br> including a holiday or weekend must set the Cycle <br> Date equal to the next US business date. And an <br> event that occurs on a Global Market where the <br> Eastern Time equivalent is a US business date (T) <br> where subsequent events for that event may occur <br> on the next Eastern Time equivalent US business <br> date (T+1) must set the Cycle Date equal to T+1. <br> The Cycle Date must be populated for all orders in <br> an options series for which the trading cycle begin <br> date is prior to the trading cycle end date. The Cycle <br> Date must be between the Event Date and T+1, <br> inclusive. (Where T+1 means Trade Date plus the <br> next Trade Date.) | C |

### 5.2.2.4. Option Order Adjusted Event

This event supports changes to the price, quantity, working price, display price, and display quantity. All other order instructions are assumed to be unchanged.

Table 40: Option Order Adjusted Event

- Complex Order Key: date, exchange, [complexOptionID,] complexOrderID

### 5.2.2.5. Complex Option Order Adjusted Event

When a complex option is modified in such a way that only impacts the price and/or quantity, an instance of this event can be reported in place of the Complex Option Order Modified event.

The only types of modifications that are allowed to be reported with this event are changes to the price or quantity of the order.

For changes in quantity, both quantity and leavesQty are required (i.e., either both are reported or neither are reported).

Table 41: Complex Option Order Adjusted Event

Complex Option Order Adjusted (OCOJ)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message Type | OCOJ | R |
| 2 | exchange | Exchange ID | The identifier for the exchange which has received <br> this order | R |
| 3 | eventTimestamp | Timestamp | The date/time at which the modification was received <br> or originated | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify <br> the sequence of events when multiple events have <br> the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | optionID | Text (40) | The ID previously assigned to this option in the <br> reporter's option directory | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the complex order <br> by the exchange | R |
| 8 | originaIOrderID | Text (40) | The internal order ID that used to be assigned to this <br> order until this modification happened. If the order <br> kept its ID through the modification, then this value <br> need not be included | C |
| 9 | initiator | Choice | Indicates who initiated the order modification: See | R |

- Previous Order Key: date, exchange, optionID, originalOrderID,

### 5.2.2.6. Stock Leg Adjusted Event

When a stock leg is modified where it only impacts the price and/or quantity, an instance of this event can be reported in place of the Stock Leg Modified event.

For changes in quantity, both quantity and leavesQty are required (i.e., either both are reported or neither are reported).

Table 42: Stock Leg Adjusted Event

- Complex Order Key: date, exchange, [complexOptionID,] complexOrderIDOptions

### 5.2.3.Order Canceled Event

An order canceled event is used to report a cancelation of a simple option order or a complex option order. For complex options orders, if leg-level orders have been opened before a canceled event, then canceled events must be reported for each of the leg orders as well.

CAT also supports partial cancels. Partial canceled events for complex orders follow the same rule, if there are open leg-level orders before a canceled event, partial canceled events must also be reported for each of the legs.

Note that the order canceled events contains both the fields optionID and symbol. Both of these fields are conditional. If the order canceled event is for a stock leg order corresponding to a complex option order, then the symbol field is mandatory. If the order canceled event is for a simple option order, a complex option order, or an option leg order of a complex order, then the field optionID is mandatory.

Table 43: Option Order Canceled

| Option Order Canceled (OOC) |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| \# | Field Name | Data Type | Description | Include Key |  |
| 1 | type | Message Type | OOC | R |  |
| 2 | exchange | Exchange ID | The ID for the exchange reporting the order canceled | R |  |
| 3 | eventTimestamp | Timestamp | The date/time at which the cancellation was received <br> or originated | R |  |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify <br> the sequence of events when multiple events have <br> the same timestamps | C |  |
| 5 | seqNumSub | Text (10) | Text (40) | A sequence number subsystem identifier | The ID previously assigned to this option in the <br> reporter's option dictionary. Used if this cancel is for <br> a simple option order or complex option order. <br> Either optionID or symbol, but not both, must be |
| 6 | optionID | provided. |  |  |  |

| Option Order Canceled (OOC) |  | Include Key |  |  |
| :--- | :--- | :--- | :--- | :--- |
| \# | Field Name | Data Type | Description | acceptable values |
| 12 | canceIReason | Choice | Code representing the reason why the order was <br> canceled. The actual value of the code is exchange <br> specific. See Data Dictionary for the list of allowed <br> values | O |
| 13 | member | Member Alias | The identifier for the member firm that is responsible <br> for the order | R |
| 14 | Date | Set equal to the US business date upon which the <br> daily trading cycle of an event ends. A trading cycle <br> may include more than one trading session. In global <br> trading scenarios, the trading cycle of an order may <br> span multiple dates due to the CAT requirement for <br> representing all event timestamps in Eastern Time as <br> well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the <br> Eastern Time equivalent is a non-US business date <br> including a holiday or weekend must set the Cycle <br> Date equal to the next US business date. And an <br> event that occurs on a Global Market where the <br> Eastern Time equivalent is a US business date (T) <br> where subsequent events for that event may occur <br> on the next Eastern Time equivalent US business <br> date (T+1) must set the Cycle Date equal to T+1. <br> The Cycle Date must be populated for all orders in <br> an options series for which the trading cycle begin <br> date is prior to the trading cycle end date. The Cycle <br> Date must be between the Event Date and T+1, <br> inclusive. (Where T+1 means Trade Date plus the <br> next Trade Date.) | C |  |

## Linkage Keys for OOC:

- Order Key: date, exchange, optionID, orderID
- Order Key: date, exchange, symbol, orderID

### 5.2.4.Routing Orders

### 5.2.4.1. Internal Routing and Floor Activity

Internal routes on the exchange are different from internal routes in a Broker Dealer. In particular, internal routes at a broker dealer are required to be reported to CAT, but internal routes at an exchange are not.

However, there are cases where knowing the system or process of where an order executed is useful, for example when orders are routed through various internal systems on the floor. These processes differ between exchanges and the use cases are incredibly diverse. Furthermore, there is no guidance in the

CAT requirements as to what is or is not supposed to be reported in these cases, so we need to be flexible in allowing a diverse set of items to be reported. These somewhat reportable data elements arrive in two forms.

First, an order may be executed with some additional information that was not available when it was placed (e.g., as part of an auction, or through some floor trading workstation). Thus, there is an element available on Trade Events (Execution Codes), which provides a way to add special exchange specific codes to an execution. The Execution Codes is a name/value pair field (like order Handling Instructions) and can provide additional execution information, like where a trade may have been executed on the floor, or supplemental execution/clearing information.

Additionally, the Note Event (reference Section 3.7.1), which contains either an Order ID or a Quote ID to link the note to a specific order or quote can be used to add specific instructions related to the order.

Some systems are composed of multiple subsystems, each having their own reporting and order identification requirements. In such cases, it may be extremely difficult or time consuming to coerce events into a single set of unique order IDs and reporting. Thus, an internal route event is also provided for reporting an order as it progresses between internal subsystems, and possibly changes internal order ID.

### 5.2.4.2. Option Route Event

External routes from an options exchange come in three basic forms: routing all or part of a simple option series order to an away market, routing two stock legs to be crossed, and routing a stock leg for execution. All of these events require certain pieces of information to enable linkage creation that can track the entire order lifecycle.

The following Option Route Event is used to report when an exchange routes a simple option order, or any leg of a complex option order.

Table 44: Option Route Event

Option Order Route (OOR)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message Type | OOR | R |
| 2 | exchange | Exchange ID | The identifier for the exchange which is routing the <br> order away | R |
| 3 | eventTimestamp | Timestamp | The date/time at which the order was routed | R |

## Option Order Route (OOR)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol of the stock leg being routed away - only for routing stock legs. <br> Either optionID or symbol, but not both, must be provided. | C |
| 7 | optionID | Text (40) | The ID of the option being routed away. Either optionID or symbol, but not both, must be provided. | C |
| 8 | orderID | Text (40) | The internal order ID of the order being routed away | R |
| 9 | routingParty | Text (8) | The ID string used to identify the entity that is receiving this routed order | R |
| 10 | routedOrderID | Text (40) | The ID of the routed order, as represented in the order message sent to the routing broker | R |
| 11 | session | Text (40) | The ID of the session used to send the order to the routing broker | R |
| 12 | side | Choice | The side of the order: See entry for "Side" in the Data Dictionary for acceptable values | R |
| 13 | price | Price | The price of the order, if applicable. This must be provided when orderType indicates a limit order. | C |
| 14 | quantity | Unsigned | The order quantity | R |
| 15 | displayQty | Unsigned | The displayed quantity for this order | R |
| 16 | orderType | Choice | The order type is one of several possible pre-defined order types. There are a few general order type codes, and several codes unique for each exchange. See the corresponding entry in the Data Dictionary for more details about order types | R |
| 17 | coverage | Choice | Specifies whether the order is covered or uncovered This field may also be filled in as unspecified. See the data dictionary for a list of acceptable values | R |
| 18 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values | R |
| 19 | handlinglnstructions | Name / Value Pairs | The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the | C |

## Option Order Route (OOR)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | Data Dictionary for more details |  |
| 20 | result | Choice | The result of the route request. (A request can be ACK - Acknowledged, REJ - Rejected, or NR - No Response) See the data dictionary for a list of permissible values | 0 |
| 21 | resultTimestamp | Timestamp | The date/time when the exchange received the result of the route request. This timestamp is not required if the value for the result field is No Response | 0 |
| 22 | nbbPrice | Price | The NBBO at the moment just before routing this order | R |
| 23 | nbbQty | Unsigned |  | 0 |
| 24 | nboPrice | Price |  | R |
| 25 | nboQty | Unsigned |  | O |
| 26 | complexOrderID | Text (40) | The Order ID for the parent complex order, if this order represents a leg of a complex order. This must be provided if the order represents a leg of a complex order. | C |
| 27 | complexOptionID | Text (40) | The optionID for the parent complex order, if this order represents a leg of a complex order. Not reported if the complex order's orderID is globally unique | C |
| 28 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |
| 29 | cycleDate | Date | Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date ( $T$ ) where subsequent events for that event may occur on the next Eastern Time equivalent US business date $(T+1)$ must set the Cycle Date equal to $T+1$. <br> The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.) | C |

Linkage Keys for OOR:

- Order Key: date, exchange, optionID, orderID
- Order Key: date, exchange, symbol, orderID

- Route Link Key: date, symbol, routingParty, routedOrderID, exchange
- Complex Order Key: date, exchange, [complexOptionID,] complexOrderID

### 5.2.4.3. Complex Option Route Event

This is used to report when an exchange routes a complex option order to an external destination (e.g. an exchange receives a complex order from a firm and forwards it to a Floor Broker). Note that most exchanges do not route complex orders externally; this event only applies for exchanges that do.

Table 45: Complex Option Route Event

## Complex Option Order Route (OCOR)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message Type | OCOR | R |
| 2 | exchange | Exchange ID | The ID for the exchange which is routing this order. | R |
| 3 | eventTimestamp | Timestamp | The date/time at which the order was routed. | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify <br> the sequence of events when multiple events have <br> the same timestamps. | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier. | C |
| 6 | optionID | Text (40) | The ID of the option being routed away. | R |
| 7 | orderID | Text (8) | The internal order ID of the order being routed <br> away. | R |
| 8 | routingParty | The ID string used to identify the entity that is <br> receiving this routed order. | R |  |
| 9 | routedOrderID | Text (40) | The ID of the routed order, as represented in the <br> order message sent to the routing broker. | R |
| 10 | session | Text (40) | The ID of the session used to send the order to the <br> destination. | R |
| 11 | side | Choice | The side of the order, for a complex order the <br> values for side can be either "AsDirected" or <br> "Opposite", see entry for "Side" in the Data | R |

## Complex Option Order Route (OCOR)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | Dictionary for acceptable values |  |
| 12 | price | Price | The net price of the order, which may be negative. | C |
| 13 | quantity | Unsigned | The order quantity. | R |
| 14 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values. | R |
| 15 | handlingInstructions | Name / Value Pairs | The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details. | C |
| 16 | result | Choice | The result of the route request. (A request can be ACK - Acknowledged, REJ - Rejected, or NR - No Response) See the data dictionary for a list of permissible values. | 0 |
| 17 | resultTimestamp | Timestamp | The date/time when the exchange received the result of the route request. This timestamp is not required if the value for the result field is No Response. | 0 |
| 18 | isGloballyUnique | Boolean | If reported with a value of true, then the orderID is globally unique across all optionIDs for this exchange/date. This means that no other complex order can have the same orderID. Furthermore, leg events for this complex order must be reported with just the complexOrderID and not the complexOptionID. | 0 |
| 19 | coverage | Choice | Specifies whether the order is covered or uncovered. This field may also be filled in as unspecified. See the data dictionary for a list of acceptable values. | C |
| 20 | member | Member Alias | The identifier for the member firm that is responsible for the order. | R |
| 21 | cycleDate | Date | Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date ( $T$ ) | C |

## Complex Option Order Route (OCOR)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  | where subsequent events for that event may occur <br> on the next Eastern Time equivalent US business <br> date (T+1) must set the Cycle Date equal to T+1. <br> The Cycle Date must be populated for all orders in <br> an options series for which the trading cycle begin <br> date is prior to the trading cycle end date. The <br> Cycle Date must be between the Event Date and <br> T+1, inclusive. (Where T+1 means Trade Date plus <br> the next Trade Date.) |  |

Linkage Keys for OCOR:

- Order Key: date, exchange, optionID, orderID (if isGloballyUnique is false)
- Route Link Key: date, exchange, routingParty, routedOrderID

### 5.2.4.4. Internal Option Route Event

This event provides a means by which options (and legs of complex options) can be routed between internal systems.

Table 46: Internal Option Route Event

| Internal Option Route (OIR) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 1 | type | Message Type | OIR | R |
| 2 | exchange | Exchange ID | The ID for the exchange which is routing this order | R |
| 3 | eventTimestamp | Timestamp | The date/time at which the order was routed | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol of the stock leg being routed away - only for routing stock legs. <br> Either optionID or symbol, but not both, must be provided. | C |
| 7 | optionID | Text (40) | The ID of the option being routed away. Either optionID or symbol, but not both, must be provided. | C |

## Internal Option Route (OIR)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 8 | orderID | Text (40) | The internal order ID of the order being routed away | R |
| 9 | routingParty | Text (8) | The ID string used to identify the internal subsystem that is receiving this routed order. This value must match the value reported by the receiving subsystem in the routingParty field of their Order Accepted report | R |
| 10 | routedOrderID | Text (40) | The ID assigned to this order by the exchange when submitting the order to the subsystem. This value must match the value reported by the receiving subsystem in the routedorder ID field of their Order Accepted report | R |
| 11 | session | Text (40) | The ID assigned to the specific session used when sending the order from the sending subsystem to the receiving subsystem. This value must match the value reported by the receiving subsystem in the session field of their Order Accepted report | R |
| 12 | side | Choice | The side of the order: See entry for "Side" in the Data Dictionary for acceptable values | R |
| 13 | price | Price | The price of the order, if applicable. This must be provided when orderType indicates a limit order. | C |
| 14 | quantity | Unsigned | The order quantity | R |
| 15 | displayQty | Unsigned | The displayed quantity for this order | R |
| 16 | orderType | Choice | The order type is one of several possible predefined order types. There are a few general order type codes, and several codes unique for each exchange. See the corresponding entry in the Data Dictionary for more details about order types | R |
| 17 | coverage | Choice | Specifies whether the order is covered or uncovered. This field may also be filled in as unspecified. See the data dictionary for a list of acceptable values | R |
| 18 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values | R |
| 19 | handlingInstructions | Name / Value Pairs | The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details. | C |
| 20 | result | Choice | The result of the route request. (A request can be ACK - Acknowledged, REJ - Rejected, or NR - No Response) See the data dictionary for a list of | 0 |

## Internal Option Route (OIR)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 21 | resultTimestamp | Timestamp | permissible values <br> The date/time when the exchange received the <br> result of the route request. This timestamp is not <br> required if the value for the result field is No <br> Response | O |
| 22 | complexOrderID | Text (40) | The Order ID for the parent complex order, if this <br> order represents a leg of a complex order. This <br> must be provided if the order represents a leg of a <br> complex order. | C |
| 23 | complexOptionID | Text (40) | The optionID for the parent complex order, if this <br> order represents a leg of a complex order. Not <br> reported if the complex order's orderID is globally <br> unique | C |
| 24 | member | cycleDate | Dember Alias | The identifier for the member firm that is <br> responsible for the order |
| Date |  | Set equal to the US business date upon which the <br> daily trading cycle of an event ends. A trading cycle <br> may include more than one trading session. In <br> global trading scenarios, the trading cycle of an <br> order may span multiple dates due to the CAT <br> requirement for representing all event timestamps <br> in Eastern Time as well as the occurrence of US <br> Holidays. <br> An event that occurs on a Global Market where the <br> Eastern Time equivalent is a non-US business date <br> including a holiday or weekend must set the Cycle <br> Date equal to the next US business date. And an <br> event that occurs on a Global Market where the <br> Eastern Time equivalent is a US business date (T) <br> where subsequent events for that event may occur <br> on the next Eastern Time equivalent US business <br> date (T+1) must set the Cycle Date equal to T+1. | C |  |
| The Cycle Date must be populated for all orders in |  |  |  |  |
| an options series for which the trading cycle begin |  |  |  |  |
| date is prior to the trading cycle end date. The |  |  |  |  |
| Cycle Date must be between the Event Date and |  |  |  |  |
| T+1, inclusive. (Where T+1 means Trade Date plus |  |  |  |  |
| the next Trade Date.) |  |  |  |  |$\quad$| R |
| :--- |

## Linkage Keys for OIR:

- Order Key: date, exchange, optionID, orderID
- Order Key: date, exchange, symbol, orderID
- Route Link Key: date, optionID, routingParty, routedOrderID, session, exchange
- Route Link Key: date, symbol, routingParty, routedOrderID, session, exchange
- Complex Order Key: date, exchange, [complexOptionID,] complexOrderID

### 5.2.4.5. Internal Complex Option Route Event

While complex orders are not routed between exchanges, they may be routed internally. This event provides a means by which complex options can be routed between internal systems.

Table 47: Internal Complex Option Route Event

Internal Complex Option Route (OCIR)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 1 | type | Message Type | OCIR | R |
| 2 | exchange | Exchange ID | The ID for the exchange which is routing this order | R |
| 3 | eventTimestamp | Timestamp | The date/time at which the order was routed | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | optionID | Text (40) | The ID of the option being routed away | R |
| 7 | orderID | Text (40) | The internal order ID of the order being routed away | R |
| 8 | routingParty | Text (8) | The ID string used to identify the internal subsystem that is receiving this routed order. This value must match the value reported by the receiving subsystem in the routingParty field of their Order Accepted report | R |
| 9 | routedOrderID | Text (40) | The ID assigned to this order by the exchange when submitting the order to the subsystem. This value must match the value reported by the receiving subsystem in the routedorderID field of their Order Accepted report | R |
| 10 | session | Text (40) | The ID assigned to the specific session used when sending the order from the sending subsystem to the receiving subsystem. This value must match the value reported by the receiving subsystem in the session field of their Order Accepted report | R |
| 11 | side | Choice | The side of the order, for a complex order the values for side can be either "AsDirected" or "Opposite", see entry for "Side" in the Data Dictionary for acceptable values | R |
| 12 | price | Price | The net price of the order, which may be negative. | C |
| 13 | quantity | Unsigned | The order quantity | R |

| Internal Complex Option Route (OCIR) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 14 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values | R |
| 15 | handlinglnstructions | Name / Value Pairs | The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details | C |
| 16 | orderAttributes | Name/Value Pairs | Defines reportable attributes of an order that are not necessarily handling instructions | C |
| 17 | isGloballyUnique | Boolean | If reported with a value of true, then the orderID is globally unique across all optionIDs for this exchange/date. This means that no other complex order can have the same orderID. Furthermore, leg events for this complex order must be reported with just the complexOrderID and not the complexOptionID | 0 |
| 18 | exchOriginCode | Choice | Exchange defined code designating the origin of the order, see data dictionary for list of acceptable values | C |
| 19 | coverage | Choice | Specifies whether the order is covered or uncovered. This field may also be filled in as unspecified. See the data dictionary for a list of acceptable values | C |
| 20 | executingFirm | Alphanumeric(8) | The OCC number of the executing/give-up firm | C |
| 21 | cmtaFirm | Alphanumeric(8) | The OCC number of the CMTA firm (only valid for CMTA trades) | C |
| 22 | mktMkrSubAccount | Text (20) | The sub-account for the market maker, only valid when Origin Code is Market Maker | C |
| 23 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |
| 24 | cycleDate | Date | Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date ( $T$ ) | C |

## Internal Complex Option Route (OCIR)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  | where subsequent events for that event may occur <br> on the next Eastern Time equivalent US business <br> date (T+1) must set the Cycle Date equal to T+1. <br> The Cycle Date must be populated for all orders in <br> an options series for which the trading cycle begin <br> date is prior to the trading cycle end date. The <br> Cycle Date must be between the Event Date and <br> T+1, inclusive. (Where T+1 means Trade Date plus <br> the next Trade Date.) |  |

## Linkage Keys for OCIR:

- Order Key: date, exchange, optionID, orderID
- Route Link Key: date, optionID, routingParty, routedOrderID, session, exchange

### 5.2.4.6. Modify Option Route Event

When an exchange initiates a modify or cancel/replace request on an option or stock leg order it has previously routed away, it must report its intent to modify the order, using a Modify Option Route Event.

If the request does not change the routed order ID, then both routedOrderID and routedOriginalOrderID must be the same.

Note that the Modify Option Route event contains both the fields optionID and symbol. Both of these fields are conditional. If the Modify Option Route event is for a stock leg order, then the symbol field is mandatory and optionID field is not necessary. If the Modify Option Route event is for a simple option order, or an option leg order of a complex order, then the field optionID is mandatory.

Table 48: Modify Option Route Event

| Modify Option Route (OOMR) |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| $\#$ | Field Name | Data Type | Description | Include Key |
| 1 | type | Message Type | OOMR | R |
| 2 | exchange | Exchange ID | The ID for the exchange modifying the routed <br> order | R |
| 3 | eventTimestamp | Timestamp | The date/time when the exchange made the <br> modify request | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to <br> identify the sequence of events when multiple <br> events have the same timestamps | C |

| Modify Option Route (OOMR) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol, in either the symbology of the listing exchange or a valid alias. <br> Either optionID or symbol, but not both, must be provided. | C |
| 7 | optionID | Text (40) | The ID of the option being routed away. Either optionID or symbol, but not both, must be provided. | C |
| 8 | orderID | Text (40) | The internal order ID assigned to the order by the exchange | R |
| 9 | routingParty | Text (8) | The ID string used to identify the entity that received this routed order | R |
| 10 | routedOrderID | Text (40) | The new routed ID for the order, which will be used to refer to the routed order after the modification (in FIX, CIOrdID - in OUCH, Replacement Order Token) | R |
| 11 | routedOriginalOrderID | Text (40) | The routed ID for the order being modified, as sent to the routing broker in the original route message, or the most recent modify message (in FIX OrigCIOrdID, in OUCH Existing Order Token) | R |
| 12 | session | Text (40) | The ID assigned to the session used to send the modify request from the exchange to the routing broker- must also match the session in the original Order Route message for this order | R |
| 13 | price | Price | The limit price of the order, if applicable. This must be provided when orderType indicates a limit order. | C |
| 14 | quantity | Unsigned | The order quantity | R |
| 15 | displayQty | Unsigned | The displayed quantity for this order | R |
| 16 | orderType | Choice | The type of order being submitted (e.g., market, limit). See the corresponding entry in the Data Dictionary for more details about order types | R |
| 17 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values | R |
| 18 | handlingInstructions | Name/Value Pairs | Can include zero or more handling instructions, as described in Data Dictionary for Handling Instructions | C |

| Modify Option Route (OOMR) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 19 | coverage | Choice | Specifies whether the order is covered or uncovered. This field may also be filled in as unspecified. See the data dictionary for a list of acceptable values | R |
| 20 | result | Choice | The result of the modify request. (A request can be ACK - Acknowledged, REJ - Rejected, or NR No Response) See the data dictionary for a list of permissible values | 0 |
| 21 | resultTimestamp | Timestamp | The date/time when the exchange received the result of the modify request. This timestamp is not required if the value for the result field is No Response | 0 |
| 22 | nbbPrice | Price | The national best bid price at the moment the trade occurred | R |
| 23 | nbbQty | Unsigned | The national best bid quantity at the moment the trade occurred | 0 |
| 24 | nboPrice | Price | The national best offer price at the moment the trade occurred | R |
| 25 | nboQty | Unsigned | The national best offer quantity at the moment the trade occurred | 0 |
| 26 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |
| 27 | cycleDate | Date | Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date ( T ) where subsequent events for that event may occur on the next Eastern Time equivalent US business date ( $\mathrm{T}+1$ ) must set the Cycle Date equal to $\mathrm{T}+1$. <br> The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and $T+1$, inclusive. (Where $T+1$ means Trade Date plus the next Trade Date.) | C |

Linkage Keys for OOMR:

- Order Key: date, exchange, optionID, orderID
- Order Key: date, exchange, symbol, orderID
- Route Link Key: date, optionID, routingParty, routedOrderID, exchange
- Route Link Key: date, symbol, routingParty, routedOrderID, exchange
- Previous Route Link Key: date, optionID, routingParty, routedOriginalOrderID, exchange
- Previous Route Link Key: date, symbol, routingParty, routedOriginalOrderID, exchange

### 5.2.4.7. Option Cancel Route Event

When an exchange initiates a cancel request on an order that has been previously routed away, it must report the intent to cancel, using an Option Cancel Route Event.

Note that the Option Cancel Route event contains both the fields optionID and symbol. Both of these fields are conditional. If the Option Cancel Route event is for a stock leg order, then the symbol field is mandatory and optionID field is not necessary. If the Option Cancel Route event is for a simple option order, or an option leg order of a complex order, then the field optionID is mandatory.

Table 49: Option Cancel Route Event

Option Cancel Route (OOCR)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message Type | OOCR | R |
| 2 | exchange | Exchange ID | The ID for the exchange canceling the routed order | R |
| 3 | eventTimestamp | Timestamp | The date/time when the cancel request was sent to <br> the routing firm | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify <br> the sequence of events when multiple events have <br> the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | symbol | Symbol | The stock symbol, in either the symbology of the <br> listing exchange or a valid alias. <br> Either optionID or symbol, but not both, must be <br> provided. | C |
| 7 | optionID | Text (40) | The ID of the option being routed away. <br> Either optionID or symbol, but not both, must be <br> provided. | C |

| Option Cancel Route (OOCR) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 8 | orderID | Text (40) | The internal order ID assigned to the order by the exchange | R |
| 9 | routingParty | Text (8) | The ID string used to identify the entity that received this routed order. This value will match the value on the Route event for the order being canceled | R |
| 10 | routedOrderID | Text (40) | The routed ID for the order being canceled - must also match the routedOrderID in the original Order Route message for this order | R |
| 11 | session | Text (40) | The session ID on which the cancel request is being made - must also match the session in the original Order Route message for this order | R |
| 12 | desiredLeavesQty | Unsigned | The desired number of shares remaining in the order after the cancel request has been issued. A value of zero indicates a full cancel | R |
| 13 | result | Choice | The result of the cancel request. (A request can be ACK - Acknowledged, REJ - Rejected, or NR - No Response) See the data dictionary for a list of permissible values | 0 |
| 14 | resultTimestamp | Timestamp | The date/time when the exchange received the result of the cancel request. This timestamp is not required if the value for the result field is No Response | 0 |
| 15 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |
| 16 | cycleDate | Date | Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date $(T+1)$ must set the Cycle Date equal to $T+1$. <br> The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.) | C |

Linkage Keys for OOCR:

- Order Key: date, exchange, optionID, orderID
- Order Key: date, exchange, symbol, orderID
- Route Link Key: date, optionID, routingParty, routedOrderID, exchange
- Route Link Key: date, symbol, routingParty, routedOrderID, exchange

### 5.2.5.Trades and Fills

All trades on an options exchange involving options are reported as two sided trades, with appropriate clearing information for each side. In the case where an order is routed away, the trade is still reported as a two-sided trade, but without an order on one side (that side will just have clearing information).

Trades off-exchange for non-option legs are reported as one-sided pass through fill events. Note the difference between a trade which the exchange transacted and a fill which the exchange is passing on. Both events are reportable, but they will be reported in different ways. The former as a two-sided trade, and the latter as either a one-sided fill.

### 5.2.5.1. Simple Option Trade Event

Simple option trade events are two-sided trade reports, providing details about both sides of the trade for an option. The same event is used for both simple options trades and trades for each leg of a complex option.

This section will deal only with simple option trades, the following section will demonstrate how the same event type will be used to report trades at the leg level of complex options.

## Option Trade Event

Each option trade contains the following data elements.
Table 50: Option Trade Event

## Option Trade (OT)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message Type | OT | R |
| 2 | exchange | Exchange ID | The ID of the participant reporting the trade event to <br> CAT | R |
| 3 | eventTimestamp | Timestamp | The date/time of execution | R |

## Option Trade (OT)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | tradeID | Text (40) | This ID will be used when a specific trade needs to be identified, for example in trade break and correction reports. The combination of date, exchange, optionID, and tradeID must be globally unique | R |
| 7 | optionID | Text (40) | The ID of the option being traded | R |
| 8 | quantity | Unsigned | Quantity of the trade | R |
| 9 | price | Price | Price of the trade | R |
| 10 | nbbPrice | Price | The NBBO for this particular option series at the moment the event takes place | R |
| 11 | nbbQty | Unsigned |  | 0 |
| 12 | nboPrice | Price |  | R |
| 13 | nboQty | Unsigned |  | 0 |
| 14 | saleCondition | Text (8) | Conditions under which trade was executed | C |
| 15 | executionCodes | Name / Value Pairs | Adds special exchange specific codes to an execution. Zero or more codes can be entered to provide additional execution information, like where a trade may have been executed on the floor. These codes apply to both sides of the trade | C |
| 16 | buyDetails | Side Trade Details | Information for the buy side of the trade. Format and element definitions for Buy Details are described in Side Trade Details in Table 54 | R |
| 17 | sellDetails | Side Trade Details | Information for the sell side of the trade. Format and element definitions for Sell Details are described in Side Trade Details in - Table 54 | R |
| 18 | cycleDate | Date | Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the | C |

| Option Trade (OT) |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| \# | Field Name | Data Type | Description | Include Key |
|  |  | Eastern Time equivalent is a US business date (T) <br> where subsequent events for that event may occur <br> on the next Eastern Time equivalent US business <br> date (T+1) must set the Cycle Date equal to T+1. <br> The Cycle Date must be populated for all orders in <br> an options series for which the trading cycle begin <br> date is prior to the trading cycle end date. The Cycle <br> Date must be between the Event Date and T+1, <br> inclusive. (Where T+1 means Trade Date plus the <br> next Trade Date.) |  |  |

## Side Trade Details

Each side of a trade contains information pertinent to the order and/or quote that contributed to the trade.
The Side Trade Details captures those data elements.

Table 51: Side Trade Details

| Side Trade Details |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| $\begin{aligned} & \text { 16.n. } 1 / \\ & \text { 17.n. } 1 \end{aligned}$ | side | Choice | The side of the executed trade: See entry for "Side" in the Data Dictionary for acceptable values | R |
| $\begin{aligned} & \text { 16.n. } 2 \text { / } \\ & \text { 17.n. } 2 \end{aligned}$ | leavesQty | Unsigned | The quantity remaining unfilled after this trade event. Not required when used in a trade correction | C |
| $\begin{aligned} & \text { 16.n. } 3 / \\ & \text { 17.n. } 3 \end{aligned}$ | openCloseIndicator | Choice | Indicates the position of the trade, applicable only when this side is an order | C |
| $\begin{aligned} & \text { 16.n. } 4 \text { / } \\ & \text { 17.n. } 4 \end{aligned}$ | quotelD | Text (40) | The ID of the quote, only applicable only when this side of the execution is a market maker quote | C |
| $\begin{aligned} & \text { 16.n. } 5 / \\ & \text { 17.n. } 5 \end{aligned}$ | orderID | Text (40) | The ID of the order, only applicable only when this side of the execution is an order | C |
| $\begin{aligned} & \text { 16.n. } 6 \text { / } \\ & \text { 17.n. } 6 \end{aligned}$ | executingFirm | Alphanumeric (8) | The OCC number of the executing firm | R |
| $\begin{aligned} & \text { 16.n. } 7 \text { / } \\ & \text { 17.n. } \end{aligned}$ | floorBroker | Member Alias | The Member Alias of the floor broker handling the trade, if the trade is handled on the floor | C |

## Side Trade Details

| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { 16.n. } 8 / \\ & \text { 17.n. } 8 \end{aligned}$ | cmtaFirm | Alphanumeric (8) | The OCC number of the CMTA firm (only valid for CMTA trades) | C |
| $\begin{aligned} & \text { 16.n. } 9 \text { / } \\ & \text { 17.n. } \end{aligned}$ | mktMkrSubAccount | Text (20) | The sub-account for the market maker, only valid when Origin Code is Market Maker | C |
| $\begin{aligned} & \text { 16.n. } 10 / \\ & 17 . n .10 \end{aligned}$ | exchOriginCode | Choice | Exchange defined code designating the origin of the order, see data dictionary for list of acceptable values | R |
| $\begin{aligned} & \text { 16.n. } 11 / \\ & \text { 17.n. } 11 \end{aligned}$ | liquidityCode | Choice | Specifies if this side of the trade was adding or removing liquidity. See entry for liquidityCode in the Data Dictionary for permitted values | 0 |
| $\begin{aligned} & \text { 16.n. } 12 \text { / } \\ & \text { 17.n. } 12 \end{aligned}$ | executionCodes | Name/Value Pairs | Describes any execution codes, as described in Data Dictionary for Execution Codes. These codes would only apply only to this side of the trade | C |
| $\begin{aligned} & \text { 16.n. } 13 / \\ & \text { 17.n. } 13 \end{aligned}$ | member | Member Alias | The identifier for the member firm that is responsible for the order | R |
| $\begin{aligned} & \text { 16.n. } 14 \text { / } \\ & \text { 17.n. } 14 \end{aligned}$ | routedOrderID | Text (40) | For events representing an away trade, the exchange-assigned ID used to route the order away. | 0 |

In some cases, an option trade may occur with neither a quoteID nor an orderID for one or both sides of the trade. In these cases, the quoteID/orderID can be omitted. However, the executionCodes must include NOBUYID and/or NOSELLID as appropriate.

Linkage Keys for OT:

- Order Key: date, exchange, optionID, buyDetails.orderID
- Order Key: date, exchange, optionID, sellDetails.orderID
- Quote Key: date, exchange, optionID, buyDetails.quoteID
- Quote Key: date, exchange, optionID, sellDetails.quoteID
- Route Link Key: date, symbol, exchange, buyDetails.routedOrderID
- Route Link Key: date, symbol, exchange, sellDetails.routedOrderID
- Trade Key: date, exchange, optionID, tradeID
- Exchange/Firm Trade Key: date, exchange, optionID, MOOTLINK, side

### 5.2.5.2. Stock Leg Fill Event

When a stock leg executes, it always executes at an away venue, which will report both sides of the trade. The options exchange, while possibly knowing both orders that crossed, did not actually perform the transaction. Thus, all transactions involving stock legs are reported as one-sided pass-along fills of the order, and contain the following data elements.

Table 52: Stock Leg Fill Event

| Option Stock Leg Fill (OSLF) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 1 | type | Message Type | OSLF | R |
| 2 | exchange | Exchange ID | The ID of the exchange reporting the fill to CAT | R |
| 3 | eventTimestamp | Timestamp | The date/time when the fill was processed by the exchange | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | fillid | Text (40) | An identifier for the fill, unique per reporter/trade date. This ID should uniquely identify any fill for the given exchange, date, and symbol | R |
| 7 | symbol | Symbol | The symbol of the stock being filled | R |
| 8 | quantity | Unsigned | Quantity of the fill | R |
| 9 | price | Price | Price of the fill | R |
| 10 | saleCondition | Text (8) | Conditions under which trade was executed | C |
| 11 | executionCodes | Name / Value Pairs | Adds special exchange specific codes to an execution. Zero or more codes can be entered to provide additional execution information, like where a trade may have been executed on the floor | C |
| 12 | side | Choice | The side of the executed trade: See entry for "Side" in the Data Dictionary for acceptable values | R |
| 13 | leavesQty | Unsigned | The quantity remaining unfilled after this fill event | R |
| 14 | orderID | Text (40) | The ID of the stock leg order | R |
| 15 | clearingFirm | Text (10) | The Member Alias of the clearing firm | 0 |
| 16 | clearingNumber | Text (20) | DTCC clearing number for this side of the trade | 0 |

## Option Stock Leg Fill (OSLF)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 17 | member | Member Alias | The identifier for the member firm that is responsible <br> for the order. This is the same member as in the <br> complex order | R |
| 18 | cycleDate | Date | Set equal to the US business date upon which the <br> daily trading cycle of an event ends. A trading cycle <br> may include more than one trading session. In global <br> trading scenarios, the trading cycle of an order may <br> span multiple dates due to the CAT requirement for <br> representing all event timestamps in Eastern Time as <br> well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the <br> Eastern Time equivalent is a non-US business date <br> including a holiday or weekend must set the Cycle <br> Date equal to the next US business date. And an <br> event that occurs on a Global Market where the <br> Eastern Time equivalent is a US business date (T) <br> where subsequent events for that event may occur <br> on the next Eastern Time equivalent US business <br> date (T+1) must set the Cycle Date equal to T+1. <br> The Cycle Date must be populated for all orders in <br> an options series for which the trading cycle begin <br> date is prior to the trading cycle end date. The Cycle <br> Date must be between the Event Date and T+1, <br> inclusive. (Where T+1 means Trade Date plus the <br> next Trade Date.) | C |

## Linkage Keys for OSLF:

- Order Key: date, exchange, symbol, orderID
- Fill Key: date, exchange, symbol, fillID

### 5.2.6.Post Trade Allocation Event

In the event of a modified, canceled, or replaced post trade Allocation, only the final allocation should be reported to CAT.

The fields quoteID and orderID must reference the quote/order from the original trade that is being allocated. If the trade has neither a quoteID nor an orderID, then this event will include neither IDs as well (this implies that the executionCodes field from the original trade message contains either NOBUYID or NOSELLID).

Table 53: Post Trade Allocation Event

## Post Trade Allocation

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 1 | type | Message Type | OPTA | R |
| 2 | exchange | Exchange ID | The ID of the exchange reporting the fill to CAT | R |
| 3 | eventTimestamp | Timestamp | The date/time when the allocation happened | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | optionID | Text (40) | The ID of the option being traded | R |
| 7 | tradeID | Text (40) | The ID for the trade that is being reallocated. This must match a previously reported trade | R |
| 8 | orderID | Text (40) | Order ID being allocated, only applicable when the allocation is related to an order. <br> Both orderID and quoteID cannot be provided. | C |
| 9 | quoteID | Text (40) | The ID of the quote, only applicable when the allocation is related to a market maker quote. <br> Both orderID and quoteID cannot be provided. | C |
| 10 | quantity | Unsigned | Quantity being allocated | R |
| 11 | price | Price | Price of the allocation | R |
| 12 | side | Choice | The side of the executed trade: See entry for "Side" in the Data Dictionary for acceptable values | R |
| 13 | receivingFirm | Alphanumeric <br> (8) | The OCC number of the receiving firm | R |
| 14 | cmtaFirm | Alphanumeric <br> (8) | The OCC number of the CMTA firm (only valid for CMTA trades) | C |
| 15 | openCloseIndicator | Choice | The position of the order: either Open, Close, or Unspecified | 0 |
| 16 | exchOriginCode | Choice | Exchange defined code designating the origin of the order, see data dictionary for list of acceptable values | 0 |
| 17 | mktMkrSubAccount | Text (20) | The sub-account for the market maker, only meaningful if exchOriginCode rolls up to Market Maker | 0 |

## Post Trade Allocation

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 18 | reason | cycleDate | Date |  |
| 19 |  | Free format text fields, describing why allocation <br> was done | O |  |
| Set equal to the US business date upon which the |  |  |  |  |
| daily trading cycle of an event ends. A trading cycle |  |  |  |  |
| may include more than one trading session. In |  |  |  |  |
| global trading scenarios, the trading cycle of an |  |  |  |  |
| order may span multiple dates due to the CAT |  |  |  |  |
| requirement for representing all event timestamps |  |  |  |  |
| in Eastern Time as well as the occurrence of US |  |  |  |  |
| Holidays. |  |  |  |  |
| An event that occurs on a Global Market where the |  |  |  |  |
| Eastern Time equivalent is a non-US business date |  |  |  |  |
| including a holiday or weekend must set the Cycle |  |  |  |  |
| Date equal to the next US business date. And an |  |  |  |  |
| event that occurs on a Global Market where the |  |  |  |  |
| Eastern Time equivalent is a US business date (T) |  |  |  |  |
| where subsequent events for that event may occur |  |  |  |  |
| on the next Eastern Time equivalent US business |  |  |  |  |
| date (T+1) must set the Cycle Date equal to T+1. |  |  |  |  |
| The Cycle Date must be populated for all orders in |  |  |  |  |
| an options series for which the trading cycle begin |  |  |  |  |
| date is prior to the trading cycle end date. The |  |  |  |  |
| Cycle Date must be between the Event Date and |  |  |  |  |
| T+1, inclusive. (Where T+1 means Trade Date plus |  |  |  |  |
| the next Trade Date.) |  |  |  |  |$\quad$.

## Linkage Keys for OPTA:

- Order Key: date, exchange, optionID, orderID
- Quote Key: date, exchange, optionID, quoteID
- Trade Key: date, exchange, optionID, tradeID

### 5.3. Option Order Restatement Event

Options orders that persist across business days (e.g., GTC orders) must be restated each day before any other activity is reported for that symbol. The restatement is an explicit confirmation that the order is still active in the reporter's order book, and also provides an opportunity to use per-day unique order IDs for all orders.

The attributes of the order will be restated in terms of the order's current state, after any corporate actions have been processed. Pursuant to each exchange's rule book, some corporate action types dictate that persisted orders will be canceled or converted. If converted, the order restatement field values should reflect the adjusted values on the effective date (e.g., if a $2: 1$ split occurred, the quantity and price would reflect the resulting change).

The following fields will not be included if restating a complex option order, but are otherwise required: openCloseIndicator, orderType, exchOriginCode, coverage, executingFirm.

Table 54: Option Order Restatement Event

| Option Order Restatement (OORS) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 1 | type | Message Type | OORS | R |
| 2 | exchange | Exchange ID | The identifier for the exchange which has received this order | R |
| 3 | eventTimestamp | Timestamp | The date/time when the order was restated | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | optionID | Text (40) | The ID previously assigned to this option in the reporter's option directory | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the exchange | R |
| 8 | originalOrderDate | Date | The most recent trading day for which the order was active. Note that this may not be the date when the order was originally accepted. If the order has been active for multiple trading days, this field must reference the previous trading day when the order was active | R |
| 9 | originalOrderID | Text (40) | The most recent internal order ID that was assigned to the order before the Restatement Event. If the orderID has not changed, then orderID and originalOrderID must be equivalent. Note this requirement is different from modification events | R |
| 10 | side | Choice | The side of the order: See entry for "Side" in the Data Dictionary for acceptable values | R |
| 11 | price | Price | The limit price of the order, if applicable. Adjusted following corporate action, if applicable | C |
| 12 | quantity | Unsigned | The order quantity, as adjusted for a corporate action, if applicable | R |
| 13 | displayQty | Unsigned | The display quantity, as adjusted for a corporate action, if applicable | R |
| 14 | displayPrice | Price | The displayed price for this order (required if displayQty is greater than zero) | C |

Option Order Restatement (OORS)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 15 | workingPrice | Price | The working price of the order | C |
| 16 | leavesQty | Unsigned | The quantity of the order that remains open, as adjusted for a corporate action, if applicable | C |
| 17 | openCloselndicator | Choice | the position of the order: either Open, Close, or Unspecified | C |
| 18 | orderType | Choice | The order type is one of several possible predefined order types. There are a few general order type codes, and several codes unique for each exchange. See the corresponding entry in the Data Dictionary for more details about order types | C |
| 19 | timelnForce | Choice | The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values | R |
| 20 | handlingInstructions | Name / Value Pairs | The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details | C |
| 21 | orderAttributes | Name/Value Pairs | Defines reportable attributes of an order, that are not necessarily handling instructions | C |
| 22 | exchOriginCode | Choice | Exchange defined code designating the origin of the order, see data dictionary for list of acceptable values | C |
| 23 | coverage | Choice | Specifies whether the order is covered or uncovered. This field may also be filled in as unspecified. See the data dictionary for a list of acceptable values | C |
| 24 | executingFirm | Alphanumeric(8) | The OCC number of the executing/give-up firm | C |
| 25 | cmtaFirm | Alphanumeric(8) | The OCC number of the CMTA firm (only valid for CMTA trades) | C |
| 26 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |
| 27 | mktMkrSubAccount | Text (20) | The sub-account for the market maker, only valid when Origin Code is Market Maker | C |
| 28 | cycleDate | Date | Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays. | C |

## Option Order Restatement (OORS)

| \# | Field Name | Data Type | Description |  |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  | An event that occurs on a Global Market where the <br> Eastern Time equivalent is a non-US business date <br> including a holiday or weekend must set the Cycle <br> Date equal to the next US business date. And an <br> event that occurs on a Global Market where the <br> Eastern Time equivalent is a US business date (T) <br> where subsequent events for that event may occur <br> on the next Eastern Time equivalent US business <br> date (T+1) must set the Cycle Date equal to T+1. <br> The Cycle Date must be populated for all orders in <br> an options series for which the trading cycle begin <br> date is prior to the trading cycle end date. The <br> Cycle Date must be between the Event Date and <br> T+1, inclusive. (Where T+1 means Trade Date plus <br> the next Trade Date.) | Include Key |

Linkage Keys for OORS:

- Order Key: date, exchange, optionID, orderID
- Previous Order Key: originalOrderDate, exchange, optionID, originalOrderID

### 5.4. Option Trade Break Event

When a trade is broken, an event is reported to CAT with the appropriate information. Note that CAT adds the event to the history of the order. The broken trade is not removed from the history, as it is something that actually happened and should be recorded.

Table 55: Option Trade Break Event

| Option Trade Break (OTB) |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| $\#$ | Field Name | Data Type | Description | Include Key |
| 1 | type | Message Type | OTB | R |
| 2 | exchange | Exchange ID | The ID for the exchange on which the trade took <br> place | R |
| 3 | eventTimestamp | Timestamp | The date/time of the break event | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify <br> the sequence of events when multiple events have <br> the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | optionID | Text (40) | The ID previously assigned to this option in the <br> reporter's option directory | R |

Option Trade Break (OTB)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 7 | tradeDate | Date | The date on which the trade being broken occurred | R |
| 8 | tradeID | Text (40) | The ID for the trade that is being broken. This must match a previously reported trade | R |
| 9 | quantity | Unsigned | If the full quantity is being broken, then this field can be omitted. Otherwise, this represents the quantity of the original trade that is being broken | 0 |
| 10 | reason | Text (255) | Free format text field, with the reason for the break | 0 |
| 11 | cycleDate | Date | Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date ( $T$ ) where subsequent events for that event may occur on the next Eastern Time equivalent US business date $(\mathrm{T}+1)$ must set the Cycle Date equal to $\mathrm{T}+1$. <br> The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.) | C |

## Linkage Keys for OTB:

- Trade Key: tradeDate, exchange, optionID, tradeID

### 5.5. Option Trade Correction Event

If a trade is corrected in any way, a correction event must be reported to CAT with all details of the trade, after having been corrected. This event must capture the entire state of the trade after having been corrected.

As with trade breaks, CAT will still keep the original trade, adding the correction to the audit trail of the trade being corrected.

Table 56: Option Trade Correction Event

| Option Trade Correction (OTC) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 1 | type | Message Type | OTC | R |
| 2 | exchange | Exchange ID | The ID of the participant reporting the trade event to CAT | R |
| 3 | eventTimestamp | Timestamp | The date/time when the trade correction occurred | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps | C |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier | C |
| 6 | tradeID | Text (40) | An identifier for the trade being corrected | R |
| 7 | refTradelD | Text (40) | The trade being referenced. Used to link corrections if trade corrections can assign new identifiers to trades. If included, refTradeID must reference a previously reported trade, or a previously reported trade correction that has a matching tradeID | C |
| 8 | optionID | Text (40) | The ID of the option being traded | R |
| 9 | quantity | Unsigned | Quantity of the trade | R |
| 10 | price | Price | Price of the trade | R |
| 11 | saleCondition | Text (8) | Conditions under which trade was executed | C |
| 12 | executionCodes | Name / Value Pairs | Adds special exchange specific codes to an execution. Zero or more codes can be entered to provide additional execution information, like where a trade may have been executed on the floor. These codes apply to both sides of the trade | C |
| 13 | executionTimestamp | Timestamp | The date/time of the execution, applicable only when the execution time was corrected | 0 |
| 14 | reason | Text (255) | Free format text field, describing the reason why the correction was made | 0 |
| 15 | buyDetails | Side Trade Details | Information for the buy side of the trade. Format and element definitions for Buy Details are described in Table 51: Side Trade Details. | 0 |
| 16 | sellDetails | Side Trade Details | Information for the buy side of the trade. Format and element definitions for Sell Details are described in Table 51: Side Trade Details. | 0 |

## Option Trade Correction (OTC)

| $\#$ | Field Name | Data Type | Description | Include <br> Key |
| :--- | :--- | :--- | :--- | :--- |
| 17 | cycleDate | Date | Set equal to the US business date upon which the <br> daily trading cycle of an event ends. A trading cycle <br> may include more than one trading session. In global <br> trading scenarios, the trading cycle of an order may <br> span multiple dates due to the CAT requirement for <br> representing all event timestamps in Eastern Time as <br> well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the <br> Eastern Time equivalent is a non-US business date <br> including a holiday or weekend must set the Cycle <br> Date equal to the next US business date. And an <br> event that occurs on a Global Market where the <br> Eastern Time equivalent is a US business date (T) <br> where subsequent events for that event may occur <br> on the next Eastern Time equivalent US business <br> date (T+1) must set the Cycle Date equal to T+1. | C |
| The Cycle Date must be populated for all orders in |  |  |  |  |
| an options series for which the trading cycle begin |  |  |  |  |
| date is prior to the trading cycle end date. The Cycle |  |  |  |  |
| Date must be between the Event Date and T+1, |  |  |  |  |
| inclusive. (Where T+1 means Trade Date plus the |  |  |  |  |
| next Trade Date.) |  |  |  |  |$\quad$.

Linkage Keys for OTC:

- Order Key: date, exchange, optionID, buyDetails.orderID
- Order Key: date, exchange, optionID, sellDetails.orderID
- Route Link Key: date, optionID, exchange, buyDetails.routedOrderID
- Route Link Key: date, optionID, exchange, sellDetails.routedOrderID
- Quote Key: date, exchange, optionID, buyDetails.quoteID
- Quote Key: date, exchange, optionID, sellDetails.quoteID
- Trade Key: date, exchange, optionID, tradeID
- Trade Key: date, exchange, optionID, refTradeID

### 5.6. Option Floor Broker Events

The options floor participant event captures instances when an order routed by the matching engine to a floor participant is returned to the matching engine. The floor participant has the option to request the return of the order, or to permanently relinquish the order to the matching engine.

### 5.6.1.Floor Participant Event

Table 57: Floor Participant

Floor Participant (OFP)

| Floor Participant (OFP) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
| 1 | type | Message Type | OFP | R |
| 2 | exchange | Exchange ID | The ID for the exchange that reported the event. | R |
| 3 | eventTimestamp | Timestamp | The date/time the matching engine was checked. | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps. | R |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier assigned to the system that rejected the message. Required if different systems that reject messages do not share the same message sequencing process. | C |
| 6 | optionID | Text (40) | The ID previously assigned to this option in the reporter's option directory. | R |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the exchange. | R |
| 8 | routingParty | Text (8) | The ID string used to identify the floor participant who sent this routed order. | R |
| 9 | routedOrderID | Text (40) | The ID assigned to this order when the floor participant submits the order to the exchange. | R |
| 10 | routedOriginalOrderID | Text (40) | The routedOrderID for the OFP being modified. | C |
| 11 | session | Text (40) | The name of the session used to send the order from the floor participant to the matching engine. | R |
| 12 | side | Choice | The side of the order: See entry for "side" in the Data Dictionary for acceptable values. | R |
| 13 | price | Price | Limit price for the event, which may be different than the limit price for the order. <br> Required unless the Order Type precludes a price. | C |
| 14 | quantity | Unsigned | Quantity of the event. May be different from both the order qty and the leaves qty for the order. | R |
| 15 | displayQty | Unsigned | The displayed quantity for this event | R |

## Floor Participant (OFP)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 16 | displayPrice | Price | Display price for the event. This must be provided <br> on simple option orders (i.e. complexOrderID is <br> null) when displayQty is greater than zero. | C |
| 17 | workingPrice | Price | Working Price of the event. | C |
| 18 | orderType | Choice | See the corresponding entry in the Data Dictionary <br> for more details about order types. <br> Required if the event has a different orderType <br> from the order. | C |
| 19 | timelnForce | Choice | Time-in-Force for the event. See the Data <br> Dictionary for a complete list of acceptable values. | R |
| 20 | handlingInstructions | Name /Value <br> Pairs | The handling instructions field contains one or <br> more instruction codes from the pre-defined list of <br> order handling instructions. See the documentation <br> in the Data Dictionary for more details. <br> Instructions presented here should include | C |
| 29 | cycleDate | instructions added by the Floor Participant, if any. |  |  |

## Floor Participant (OFP)

| \# | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
|  |  | in Eastern Time as well as the occurrence of US <br> Holidays. <br> An event that occurs on a Global Market where the <br> Eastern Time equivalent is a non-US business date <br> including a holiday or weekend must set the Cycle <br> Date equal to the next US business date. And an <br> event that occurs on a Global Market where the <br> Eastern Time equivalent is a US business date (T) <br> where subsequent events for that event may occur <br> on the next Eastern Time equivalent US business <br> date (T+1) must set the Cycle Date equal to T+1. <br> The Cycle Date must be populated for all orders in <br> an options series for which the trading cycle begin <br> date is priot to the trading cycle end date. The <br> Cycle Date must be between the Event Date and <br> T+1, inclusive. (Where T+1 means Trade Date plus <br> the next Trade Date.) |  |  |

## Linkage Keys for OFP:

- Order Key: date, exchange, optionID, orderID
- Cross Order Key: date, exchange, optionID, orderID, pairedOrderld (if populated in order attributes name value pair)
- Route Link Key: date, optionID, routingParty, routedOrderID, session, exchange
- Complex Order Key: date, exchange, [complexOptionID,] complexOrderID

### 5.6.2.Complex Floor Participant Event

Table 58: Complex Floor Participant Event

| Complex Floor Participant (OCFP) |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| $\#$ | Field Name | Data Type | Description | Include Key |
| 1 | type | Message Type | OCFP | R |
| 2 | exchange | Exchange ID | The ID for the exchange. | R |
| 3 | eventTimestamp | Timestamp | The date/time the matching engine was checked. | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify <br> the sequence of events when multiple events have <br> the same timestamps. | R |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier assigned <br> to the system that rejected the message. Required <br> if different systems that reject messages do not <br> share the same message sequencing process. | C |
| 6 | optionID | Text (40) | The ID previously assigned to this option in the | R |

## Complex Floor Participant (OCFP)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | reporter's option directory |  |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the exchange. | R |
| 8 | routingParty | Text (8) | The ID string used to identify the entity or individual who sent this routed order. | R |
| 9 | routedOrderID | Text (40) | The ID assigned to this order by the routing firm when submitting the order to the exchange | R |
| 10 | routedOriginalOrderID | Text (40) | The routed ID for the OCFB being modified. | C |
| 11 | session | Text (40) | The name of the session used to send the order from the floor participant to the exchange. | R |
| 12 | side | Choice | The side of the order, for a complex order the values for side can be either "AsDirected" or "Opposite", see entry for "Side" in the Data Dictionary for acceptable values. | R |
| 13 | price | Price | The net price of the order, which may be negative. | C |
| 14 | quantity | Unsigned | Quantity of the event. | R |
| 15 | timelnForce | Choice | Time-in-Force for the event. See the Data Dictionary for a complete list of acceptable values. | R |
| 16 | handlingInstructions | Name / Value Pairs | The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details. <br> Instructions presented here should include instructions added by the Floor Participant, if any. | C |
| 17 | orderAttributes | Name/Value Pairs | Defines reportable attributes of an order that are not necessarily handling instructions. <br> Attributes presented here should include instructions added by the Floor Participant, if any. | C |
| 18 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |
| 19 | cycleDate | Date | Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps | C |

## Complex Floor Participant (OCFP)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  | in Eastern Time as well as the occurrence of US <br> Holidays. <br> An event that occurs on a Global Market where the <br> Eastern Time equivalent is a non-US business date <br> including a holiday or weekend must set the Cycle <br> Date equal to the next US business date. And an <br> event that occurs on a Global Market where the <br> Eastern Time equivalent is a US business date (T) <br> where subsequent events for that event may occur <br> on the next Eastern Time equivalent US business <br> date (T+1) must set the Cycle Date equal to T+1. <br> The Cycle Date must be populated for all orders in <br> an options series for which the trading cycle begin <br> date is prior to the trading cycle end date. The <br> Cycle Date must be between the Event Date and <br> T+1, inclusive. (Where T+1 means Trade Date plus <br> the next Trade Date.) |  |

## Linkage Keys for OCFP:

- Order Key: date, exchange, optionID, orderID
- Cross Order Key: date, exchange, optionID, orderID, pairedOrderld (if populated in order attributes name value pair)
- Route Link Key: date, optionID, routingParty, routedOrderID, session, exchange
- Complex Order Key: date, exchange, [complexOptionID,] complexOrderID

### 5.6.3.Return to Floor Participant Event

Table 59: Return to Floor Participant

## Return to Floor Participant (ORFP)

| $\#$ | Field Name | Data Type | Description | Include Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message Type | ORFP | R |
| 2 | exchange | Exchange ID | The ID for the exchange. | R |
| 3 | eventTimestamp | Timestamp | The date/time the matching engine was checked. | R |
| 4 | sequenceNumber | Unsigned | The sequence number of the event, used to identify <br> the sequence of events when multiple events have <br> the same timestamps. | R |
| 5 | seqNumSub | Text (10) | A sequence number subsystem identifier assigned to <br> the system that rejected the message. Required if <br> different systems that reject messages do not share <br> the same message sequencing process. | C |
| 6 | optionID | Text (40) | The ID previously assigned to this option in the | R |

## Return to Floor Participant (ORFP)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | reporter's option directory |  |
| 7 | orderID | Text (40) | The internal order ID assigned to the order by the exchange. If a leg is being canceled, the orderID will represent the leg order being canceled | R |
| 8 | cancelQty | Unsigned | The quantity being canceled | R |
| 9 | leavesQty | Unsigned | The quantity left open after the cancel event (zero for a full cancel) | R |
| 10 | initiator | Choice | Indicates who initiated the order cancellation: See entry for "initiator" in the Data Dictionary for acceptable values | R |
| 11 | cancelReason | Choice | Code representing the reason why the order was returned to the Floor Participant. The actual value of the code is exchange specific. See Data Dictionary for the list of allowed values | 0 |
| 12 | member | Member Alias | The identifier for the member firm that is responsible for the order | R |
| 13 | cycleDate | Date | Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays. <br> An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date $(\mathrm{T}+1)$ must set the Cycle Date equal to $\mathrm{T}+1$. <br> The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.) | C |

## Linkage Keys for ORFP:

- Order Key: date, exchange, optionID, orderID

### 5.7. Lifecycle Keys

The lifecycle keys for each event are summarized in the following table. The date component of each Lifecycle Key is typically derived from the event timestamp. However, when a cycle date is provided, it will be used as the date component of the Lifecycle Key, allowing events that occur on different calendar dates, but within the same cycle date, to be properly linked.

Table 60: Section 5 Lifecycle Keys

| Section | Event | Lifecycle Keys |
| :---: | :---: | :---: |
| 5.1.1 | Quote | Quote Key: date, exchange, optionID, quoteID <br> Previous Quote Key: date, exchange, optionID, originalQuoteID |
| 5.1.2 | Quote Cancel | Quote Key: date, exchange, optionID, quotelD |
| 5.2.1.1 | Simple Option Order Accepted | Order Key: date, exchange, optionID, orderID <br> Cross Order Key: date, exchange, orderID, pairedOrderld (if populated in order attributes name value pair) <br> Route Link Key: date, optionID, routingParty, routedOrderID, session, exchange <br> Complex Order Key: date, exchange, [complexOptionID,] complexOrderID |
| 5.2.1.2 | Complex Option Order Accepted | Order Key: date, exchange, [optionID,] orderID <br> Cross Order Key: date, exchange, [optionID], orderID, pairedOrderld (if populated in order attributes name value pair) Route Link Key: date, optionID, routingParty, routedOrderID, session, exchange |
| 5.2.1.3 | Stock Leg Order | Order Key: date, exchange, symbol, orderID <br> Complex Order Key: date, exchange, [complexOptionID,] complexOrderID |
| 5.2.2.1 | Option Order Modified | Order Key: date, exchange, optionID, orderID <br> Cross Order Key: date, exchange, orderID, pairedOrderld (if populated in order attributes name value pair) <br> Previous Order Key: date, exchange, optionID, originalOrderID <br> Complex Order Key: date, exchange, [complexOptionID,] complexOrderID <br> Route Link Key: date, optionID, routedOrderID, exchange, routingParty, session |
| 5.2.2.2 | Complex Option Order Modified | Order Key: date, exchange, optionID, orderID <br> Cross Order Key: date, exchange, optionID, orderID, pairedOrderld (if populated in order attributes name value pair) <br> Previous Order Key: date, exchange, optionID, originalOrderID <br> Route Link Key: date, optionID, routedOrderID, exchange, routingParty, session |
| 5.2.2.3 | Stock Leg Modified | Order Key: date, exchange, symbol, orderID |

| Section | Event | Lifecycle Keys |
| :---: | :---: | :---: |
|  |  | Previous Order Key: date, exchange, symbol, originalOrderID <br> Complex Order Key: date, exchange, [complexOptionID,] complexOrderID |
| 5.2.2.4 | Option Order Adjusted | Order Key: date, exchange, optionID, orderID <br> Cross Order Key: date, exchange, optionID, orderID, pairedOrderld (if populated in order attributes name value pair) <br> Previous Order Key: date, exchange, optionID, originalOrderID <br> Complex Order Key: date, exchange, [complexOptionID,] complexOrderID <br> Route Link Key: date, optionID, routedOrderID, exchange, routingParty, session |
| 5.2.2.5 | Complex Option Order Adjusted | Order Key: date, exchange, optionID, orderID <br> Cross Order Key: date, exchange, optionID, orderID, pairedOrderld (if populated in order attributes name value pair) <br> Previous Order Key: date, exchange, optionID, originalOrderID <br> Route Link Key: date, optionID, routedOrderID, exchange |
| 5.2.2.6 | Stock Leg Adjusted | Order Key: date, exchange, symbol, orderID <br> Previous Order Key: date, exchange, symbol, originalOrderID <br> Complex Order Key: date, exchange, [complexOptionID,] complexOrderID <br> Route Link Key: date, optionID, routedOrderID, exchange, routingParty, session |
| 5.2.3 | Option Order Canceled | Order Key: date, exchange, optionID, orderID <br> Order Key: date, exchange, symbol, orderID |
| 5.2.4.2 | Option Route | Order Key: date, exchange, optionID, orderID <br> Order Key: date, exchange, symbol, orderID <br> Route Link Key: date, optionID, routingParty, routedOrderID, exchange <br> Route Link Key: date, symbol, routingParty, routedOrderID, exchange <br> Complex Order Key: date, exchange, [complexOptionID,] complexOrderID |
| 5.2.4.3 | Complex Option Route | Order Key: date, exchange, optionID, orderID <br> Route Link Key: date, exchange, routingParty, routedOrderID |
| 5.2.4.4 | Internal Option Route | Order Key: date, exchange, optionID, orderID <br> Order Key: date, exchange, symbol, orderID <br> Route Link Key: date, optionID, routingParty, routedOrderID, session, exchange <br> Route Link Key: date, symbol, routingParty, routedOrderID, session, exchange <br> Complex Order Key: date, exchange, [complexOptionID,] complexOrderID |
| 5.2.4.5 | Internal Complex Option Route | Order Key: date, exchange, optionID, orderID <br> Route Link Key: date, optionID, routingParty, routedOrderID, session, |

| Section | Event | Lifecycle Keys |
| :---: | :---: | :---: |

## 6. FINRA Reporting

### 6.1. TRF/ORF/ADF Transaction Data Event

Transactions in Eligible Securities reported to a FINRA trade reporting facility must be reported to CAT by FINRA.

Table 61: FINRA TRF/ORF ADF Transaction Data Event

FINRA TRF/ORF/ADF Transaction Data Event (TRF)

| $\#$ | Field Name | Data Type | Description | Include <br> Key |
| :--- | :--- | :--- | :--- | :--- |
| 1 | type | Message <br> Type | TRF | R |
| 2 | actionType | Choice | Indicates if this is a new event, a FINRA- <br> initiated correction, or a firm-initiated correction. <br> This is a pass-through value and is not used <br> for FINRA CAT processing. Any correction <br> event must be submitted using the standard <br> correction process. <br> See Data Dictionary: actionType | R |
| 3 | tradeReportDate | Date | Date the trade report was received by the <br> reporting facility. | R |
| 4 | tradeReportTimestamp | Timestamp | Date and time the trade report was received by <br> the reporting facility. | R |
| 5 | executionDate | executionTimestamp | Timestamp | Date and time the execution occurred. |

FINRA TRF/ORF/ADF Transaction Data Event (TRF)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 14 | declineTime | Time | Time the trade was declined by the contra party. | 0 |
| 15 | declineTimestamp | Timestamp | Date and time the trade was declined by the contra party. | C |
| 16 | cancellationTimestamp | Timestamp | Date and time the reporting party cancelled the trade. | C |
| 17 | lockedlnTradeTimestamp | Timestamp | Date and time the locked-in trade report was received by the reporting facility. | C |
| 18 | tradeBreakTimestamp | Timestamp | Date and time the reporting party submitted their break request. | C |
| 19 | tradeBrokenTimestamp | Timestamp | Date and time the contra party submitted their break confirmation. | C |
| 20 | tradeSettlementDate | Date | Date on which the trade will settle. | C |
| 21 | issueSymbolld | Symbol | Character symbol of the traded issue. | R |
| 22 | marketCenterld | Choice | Reporting facility to which the trade was reported. <br> See Data Dictionary: marketCenterId | R |
| 23 | relatedMarketCenterld | Choice | For the non-tape "riskless" leg of a riskless principal transaction, the facility or market where the first leg of the transaction was reported. <br> See Data Dictionary: <br> relatedMarketCenterId | C |
| 24 | reportedSideCode | Choice | Side of the trade (buy/sell/cross) from the perspective of the firm with the reporting obligation. <br> See Data Dictionary: reportedSideCode | R |
| 25 | reportingSideMpid | Member Alias | MPID of the firm with the reporting obligation. | R |
| 26 | reportingExecutingMpid | Member Alias | MPID of the executing party. | R |
| 27 | contraSideReportingMpid | Member Alias | MPID of the contra-side firm that reported the trade. | C |
| 28 | contraExecutingMpid | Member Alias | MPID of the contra-side executing party. | C |
| 29 | reportingSideClearingNum ber | Unsigned | Clearing number of the firm that cleared the trade for the reporting-side firm. | R |

FINRA TRF/ORF/ADF Transaction Data Event (TRF)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 30 | reportingSideBranchSeque nceldentifier | Text (20) | Branch/sequence number of the reporting-side firm. | C |
| 31 | reportingSideCapacityCod <br> e | Choice | Capacity of the reporting-side firm. <br> See Data Dictionary: <br> reportingSideCapacityCode | C |
| 32 | reportingSideShortSaleCo de | Choice | Identifies a short sale by the executing firm and indicates the type of short. <br> See Data Dictionary: <br> reportingSideShortSaleCode | C |
| 33 | contraSideClearingNumber | Unsigned | Clearing number of the firm that cleared the trade for the contra-side firm. | C |
| 34 | contraSideBranchSequenc eldentifier | Text (20) | Branch/sequence number of the contra-side firm. | C |
| 35 | contraSideCapacityCode | Choice | Capacity of the contra-side firm. <br> See Data Dictionary: <br> contraSideCapacityCode | C |
| 36 | contraSideShortSaleCode | Choice | Identifies a short sale by the contra firm and indicates the type of short. <br> See Data Dictionary: <br> contraSideShortSaleCode | C |
| 37 | executionQuantity | Unsigned | Number of shares traded. | R |
| 38 | executionPrice | Price | Unit price of the trade. | R |
| 39 | reportedShareQuantity | Unsigned | Number of shares traded as reported to the SIP. | C |
| 40 | reportedUnitPrice | Price | Unit price of the trade as reported to the SIP. | C |
| 41 | clearingPrice | Price | Trade price inclusive of commissions. This information is only currently available for reported trades to the Nasdaq TRF. | C |
| 42 | publishIndicatorCode | Choice | Identifies if the trade is media reportable or not (could differ from the mediaReportedFlag for odd lot trades). <br> See Data Dictionary: <br> publishIndicatorCode | R |
| 43 | mediaReportedFlag | Choice | Identifies if the trade was media reported or not (could differ from the publishIndicatorCode for odd lot trades). | R |

FINRA TRF/ORF/ADF Transaction Data Event (TRF)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | See Data Dictionary: mediaReportedFlag |  |
| 44 | tradeStatusCode | Choice | Final status of the trade at the time it was reported. <br> See Data Dictionary: <br> tradeStatusCode | C |
| 45 | tradeSettlementModifier | Choice | Identifies a Reg NMS Settlement Type Sale Condition Code associated with a trade transaction. <br> See Data Dictionary: <br> tradeSettlementModifier | C |
| 46 | tradeThroughExemptionM odifier | Choice | Further classification of the trade with regard to Trade Through Exemption. This is entered by the firm when it reports the trade. <br> See Data Dictionary: tradeThroughExemptionModifier | C |
| 47 | tradeReportingModifier | Choice | Further classification of the trade with regard to Extended Hours/Sequence. This can either be entered by the firm or appended by the system. <br> See Data Dictionary: <br> tradeReportingModifier | C |
| 48 | sroRequiredModifier | Choice | Further classification of the trade with regard to SRO required detail. This can either be entered by the firm or appended by the system. <br> See Data Dictionary: <br> sroRequiredModifier | C |
| 49 | systemAppendedTradeRe portingModifierFlag | Choice | Identifies if the Trade Reporting Modifier Code was entered by the reporting firm or appended by the reporting facility. <br> See Data Dictionary: <br> systemAppendedTradeReportingModifie rFlag | R |
| 50 | originalModifierCode | Text (4) | Four-byte trade modifier as entered by the firm. | C |
| 51 | reversalFlag | Choice | Indicates that the trade report is reversal transaction. <br> See Data Dictionary: reversalFlag | R |
| 52 | carryoverFlag | Choice | Indicates that the trade transaction was carried over (not accepted/declined by the contra firm on $\mathrm{T}+0$ ) for processing. <br> See Data Dictionary: <br> carryoverFlag | C |
| 53 | tradeThroughExemptFlag | Choice | Indicates that the trade is trade through exempt. | C |

FINRA TRF/ORF/ADF Transaction Data Event (TRF)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | See Data Dictionary: tradeThroughExemptFlag |  |
| 54 | contraEntryFlag | Choice | Indicates that the contra party is the only side that reported the trade. <br> See Data Dictionary: <br> contraEntryFlag | C |
| 55 | explicitFeeFlag | Choice | Indicates if a Clearing Price was entered. <br> See Data Dictionary: explicitFeeFlag | C |
| 56 | clearingFlag | Choice | Clearing and matching specifications of the trade transaction. <br> See Data Dictionary: clearingFlag | R |
| 57 | specialTradeCode | Choice | Identifies special and step-out trades. <br> See Data Dictionary: specialTradeCode | C |
| 58 | supervisoryEntryCode | Choice | Indicates if a Market Operations Supervisor entered the trade message on behalf of the reporting side of the trade transaction. <br> See Data Dictionary: <br> supervisoryEntryCode | C |
| 59 | controlNumber | Text (30) | Unique identifier for the reporting side of each trade transaction. | R |
| 60 | reportingSideMemoText | Text (30) | Provides a link (via Control Number) to the original trade report, when a subsequent report is submitted to reallocate some of the trade volume to a different capacity. This is a freeform text field; participants can enter any information in this field. | C |
| 61 | tradeSourceCode | Choice | Trade Sources. <br> See Data Dictionary: tradeSourceCode | R |
| 62 | contraControlNumber | Text (30) | Control Number for the contra party. | C |
| 63 | OEMemoTx | Text (10) | Memo text entered by firm. | C |
| 64 | reportTypeCode | Choice | Identifies whether this is a No/Was report. <br> See Data Dictionary: reportTypeCode | C |
| 65 | noWasLinkNumber | Text (30) | Link to first No transaction. | C |
| 66 | intendedMarketCenter | Choice | Intended Market Center. <br> See Data Dictionary: <br> intendedMarketCenter | C |

FINRA TRF/ORF/ADF Transaction Data Event (TRF)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 67 | tradeReferenceNumber | Text (20) | Trade Reference Number | C |
| 68 | priceOverrideCode | Choice | Identifies if a price validation test was overridden when the trade was entered into ACT. (When trades are entered into ACT, they are validated for reasonableness against a Price Validation Table. The Price Override widens the validation range). <br> See Data Dictionary: priceOverrideCode | C |
| 69 | asOfFlag | Choice | Indicates as-of trade. <br> See Data Dictionary: asOfflag | R |
| 70 | lastUpdateDate | Date | Date the record was last updated. | R |
| 71 | lastUpdateTime | Timestamp | Date and time the record was last updated. | C |
| 72 | lockedInFlag | Choice | Locked-in flag. <br> See Data Dictionary: lockedInFlag | C |
| 73 | noLinkControlNumber | Text (30) | Provides a link (via Control Number) to previous No transaction. | C |
| 74 | firmTradeModifierSettleme ntTypeCode | Choice | User Trade Modifier - Settlement Type (Settlement modifiers). <br> See Data Dictionary: <br> firmTradeModifierSettlementTypeCode | C |
| 75 | firmTradeModifierThrough ExemptCode | Choice | Further classification of the trade with regard to Trade Through Exemption. This is entered by the firm when it reports the trade. <br> See Data Dictionary: <br> firmTradeModifierThroughExemptCode | C |
| 76 | firmTradeModifierLateCod e | Choice | System Trade Modifier - Time Modifiers (TradeModifier 3 in the FIX Spec). <br> See Data Dictionary: <br> firmTradeModifierLateCode | C |
| 77 | finraTradeModifierSroCode | Choice | System Trade Modifier SRO - Updated by MPP System. <br> See Data Dictionary: <br> finraTradeModifierSroCode | C |
| 78 | trfTradeModifierSroCode | Choice | User Trade Modifier - SRO - Updated by TRF. <br> SRO detail sale condition. Required indicator if a trade falls under one of the following | C |

FINRA TRF/ORF/ADF Transaction Data Event (TRF)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | transaction types (otherwise the field must not be set). <br> See Data Dictionary: <br> trfTradeModifierSroCode |  |
| 79 | trfTradeModifierLateCode | Choice | System Trade Modifier - Time Modifiers Updated by TRF. <br> See Data Dictionary: <br> trfTradeModifierLateCode | C |
| 80 | finraTradeModifierLateCod e | Choice | System Trade Modifier - Time Modifier Updated by MPP Engine. <br> See Data Dictionary: <br> finraTradeModifierLateCode | C |
| 81 | reportingObligationFlag | Choice | Identifies if the reporting-side firm had the reporting obligation for the trade under FINRA trade reporting rules. <br> See Data Dictionary: <br> reportingObligationFlag | C |
| 82 | tradeCorrectionClassCode | Choice | Trade Correction Classification. <br> See Data Dictionary: <br> tradeCorrectionClassCode | C |
| 83 | contraReportingObligation Flag | Choice | Identifies if the contra-side firm had the reporting obligation for the trade under FINRA trade reporting rules. <br> See Data Dictionary: contraReportingObligationFlag | C |
| 84 | finraContraControlDate | Date | Control Date corresponding to FINRA Contra Control Number. | C |
| 85 | finraContraControlNumber | Text (30) | Control Number used for interaction between TRFs and FINRA; populated only when trade is matched by comparison. Will be unique for a trade report date and market center. | C |
| 86 | finraControlDate | Date | Control Date of the current version of the trade. | R |
| 87 | finraControlNumber | Text (30) | Control Number of the current version of the trade. | R |
| 88 | firstTradeFinraControlDate | Date | Control Date of the first version of the trade. | R |
| 89 | firstTradeFinraControlNum ber | Text (30) | Control Number of the first version of the trade. | R |

FINRA TRF/ORF/ADF Transaction Data Event (TRF)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 90 | previousTradeFinraControl Date | Date | FINRA Control Date of the previous version of the trade. | C |
| 91 | previousTradeFinraControl Number | Text (30) | FINRA Control Number of the previous version of the trade. | C |
| 92 | positionTransferFlag | Choice | Special processing flag indicating that the transaction is for internal FINRA use only and should not be disseminated. <br> See Data Dictionary: <br> positionTransferFlag | C |
| 93 | trfContraControlNumber | Text (30) | Control Number used for interaction between TRFs and Firms; populated only when trade is matched by comparison. May not be unique for a given day. | C |
| 94 | trfControlNumber | Text (30) | Control Number used for interaction between Firms and TRFs. May not be unique for a given day. | C |
| 95 | referenceNumber | Text (20) | User-defined trade reference number. | C |

### 6.2. OTC Halt/Resume Data

FINRA will report OTC Halt/Resume data to FINRA CAT with the following fields:

Table 62: FINRA Halt/Resume

FINRA Halt/Resume (FHR)

| \# | Field Name | Data Type | Description | Include Key |
| :---: | :---: | :---: | :---: | :---: |
| 1 | type | Message Type | FHR | R |
| 2 | tradeDate | Date | Date on which message was disseminated; derived from the date portion of the messageTimestamp. | R |
| 3 | 1 messageCategory | Choice | This field, along with the haltMessageType, identifies the message format. <br> See Data Dictionary: messageCategory | R |
| 4 | haltMessageType | Choice | This field, along with the messageCategory, identifies the message format. <br> See Data Dictionary: haltMessageType | R |
| 5 | sessionldentifier | Choice | Indicates the market session of the message. <br> See Data Dictionary: sessionIdentifier | R |
| 6 | retransmissionRequester | Text (2) | Indicates if the message is an original transmission or retransmission. If the message is a retransmission, this field indicates the two-character retransmission identifier of the intended data recipient. Values may include: <br> O (space) An original transmission to all recipients <br> $\mathbf{R}$ (space) A retransmission to all recipients <br> T (space) A test cycle transmission to all recipients <br> Specific Vendor ID Two-character value to be assigned on vendor-by-vendor basis. Contact FINRA for additional information. <br> Note: Because the value could be any two-character value, this field will not be validated against a list of allowable values. Additionally, FINRA CAT will strip all leading and trailing spaces when storing the input data. | R |
| 7 | messageSequenceNumber | Unsigned | At the beginning of each operational cycle, this number will be set to '00000000' (for the Start of Day) for each data channel. | R |
| 8 | marketCenterOriginatorID | Choice | Market center or system that originated the action. | R |

|  | FINRA Halt/Resume (FHR) |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| \# | Field Name | Data Type | Description | Include Key |
|  |  |  | See Data Dictionary: <br> marketCenterOriginatorID |  |
| 9 | messageTimestamp | Timestamp | The date and time of the action (Halt, Quote Resume or Trade Resume). When the event is for a Halt, this will be the same as the haltActionTimestamp. | R |
| 10 | symbol | Symbol | Symbol of the issue being halted/resumed. | C |
| 11 | issueID | Integer | FINRA-assigned issue ID of the issue being halted/resumed. | C |
| 12 | haltActionCode | Choice | The type of action (i.e. halt, quote resume, trade resume). <br> See Data Dictionary: haltActionCode | R |
| 13 | haltActionTimestamp | Timestamp | The date/time the halt was initiated. | R |
| 14 | haltReasonCode | Choice | The reason the security is being halted/resumed. See Data Dictionary: haltReasonCode | C |

### 6.3. Equity Best Bid and Offer Event

When an SRO display-only facility accepts a routed quote, an Equity Best Bid and Offer event is reported to CAT. If the quote is rejected, then the event is not reported to CAT.

Table 63: Equity Best Bid and Offer Event

| Equity Best Bid and Offer (EBBO) |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| $\#$ | Field Name | Data Type | Description | Include <br> Key |
| 1 | type | Message Type | EBBO | R |
| 2 | marketCenterld | Exchange ID | Display-Only Facility on which the quote was <br> displayed. <br> See Data Dictionary: marketCenter Id | R |
| 3 | eventTimestamp | Timestamp | sequenceNumber | Unsigned |

## Equity Best Bid and Offer (EBBO)

| $\#$ | Field Name | Data Type | Description | Include <br> Key |
| :--- | :--- | :--- | :--- | :--- |
| 14 | askQty | Unsigned | Quantity of the ask in shares. Must be <br> provided when the askPrice is provided. <br> If the askQty is not provided, then the askPrice <br> must not be provided. <br> NOTE: in the absence of a askQty the most <br> recently reported askQty remains in effect. | C |
| 15 | quoteCondition | Text(8) | quoteInstructions | Name/Value Pairs |
| 16 | quoteID | Indicator used to determine whether a quote is <br> eligible to participate in the NBBO. <br> Value provided by the submitting firm should <br> be passed through. | C |  |
| Defines any additional instructions or attributes |  |  |  |  |
| for the quote, as described in the Data |  |  |  |  |
| Dictionary |  |  |  |  |$\quad$ C | Text (40) |
| :--- |

Lifecycle keys for this event:

- Route Link Key: date, symbol, routingParty, routedOrderID, session, exchange

Currently the only SRO display-only facility is the FINRA ADF, which does not assign or maintain an quote identifier. Since top of book quotations cannot be canceled, cancel/replaced or executed, no quote link key will be assigned. Each quotation can be tracked by its route link key.

## 7. Stock Exchange Event Examples

### 7.1. Order Accepted Event Example

This section will illustrate examples for an order accepted event, an order modified event, and an order canceled event using the following scenario: A new order is routed to the exchange, accepted by the exchange, updated by the firm that sent the order, and is finally canceled by the exchange.

Figure 4: Order Event Lifecycle Example

Table 64: Order Event Lifecycle Example

| $\#$ | Step | Reported Event | Comments |
| :--- | :--- | :--- | :--- |
| 1 | Member Firm Routes order <br> for Execution | NA | - A member firm routes an <br> order to Exchange "Exch1" <br> over session ID 7 with the <br> order ID of 2156. This order <br> is a buy order for the symbol <br> ABCD, with a quantity of <br> 300 |
| 2 | Exchange accepts the order <br> and reports an order <br> accepted event to CAT | Order Accepted Event: |  |
| type: EOA | - The exchange accepts the <br> buy order and assigns it the <br> internal order ID: 98765. |  |  |

| \# | Step | Reported Event | Comments |
| :---: | :---: | :---: | :---: |
|  |  | exchange: Exch1 <br> eventTimestamp: <br> 20170307T103242.123456789 <br> sequenceNumber: 11133 <br> symbol: ABCD <br> orderID: 98765 <br> routingParty: FRMA <br> routedOrderID: 2156 <br> session: 7 <br> side: Buy <br> price: 157.00 <br> quantity: 300 <br> displayQty: 300 <br> displayPrice: 157.00 <br> workingPrice: 157.00 <br> orderType: LMT <br> timeInForce: GTT <br> capacity: Principal <br> handlingInstructions: <br> XTIME=20170315T123456.123456789 <br> nbbPrice: 157.00 <br> nbbQty: 100 <br> nboPrice: 157.25 <br> nboQty: 100 <br> member: Mem01 | - The ID that was used by the member firm is included as the Routed Order ID because Time in Force = GTC, the order expires at a particular time: requires XTIME <br> - In handling instructions to provide the order's expire time. The NBBO is as the exchange saw it just before accepting the order. Note that after accepting the order, the aggregate NBB quantity would go up by 300 to account for this order, which is at the NBB price. |
| 3 | Member routes a modification of the order to the exchange | NA | - The member firm modifies their existing order, increasing the price to 157.01 |
| 4 | Exchange modifies order | Order Modified Event: <br> type: EOM <br> exchange: Exch1 <br> eventTimestamp: <br> 20170307T103350.123456789 <br> sequenceNumber: 11140 <br> symbol: ABCD <br> orderID: 99564 <br> originalOrderID: 98765 <br> initiator: Firm <br> nbbPrice: 157.00 <br> nbbQty: 400 <br> nboPrice: 157.25 <br> nboQty: 100 <br> price: 157.01 <br> displayPrice: 157.01 <br> workingPrice: 157.01 <br> side: Buy <br> quantity: 300 <br> displayQty: 300 <br> leavesQty: 300 | - The exchange reports a firm-initiated modification to the order described in the previous section. In this case, the price of the order is increased to 157.01. <br> - Some exchanges assign a new internal order ID after an update, in this case The new internal order ID is 99564 |

### 7.2. $\quad$ Order Trade Event Example

This section will demonstrate a trade event example that occurs after a buy and sell order are matched. In this case, a sell order is accepted for a price of 157.20 and quantity of 100 . A buy order is then accepted for a price of 157.20 and quantity of 100 . The two orders are matched and a trade event is reported.

In this scenario, the exchange is required to report the following events to CAT:

1. Order Accepted Events from each of the orders; and
2. Order Trade Event

Figure 5: Order Trade Event Example

Table 65: Trade Event Example

| $\#$ | Step | Reported Event | Comments |
| :--- | :--- | :--- | :--- |
| 1 | Member Firm FRMC Routes <br> sell order for execution | NA | - A member firm routes a sell <br> order to Exchange "Exch1" <br> over session ID FRMC:123 <br> with the order ID of 2156. <br> This order is a sell order for <br> the symbol ABCD, with a <br> quantity of 100 |
| 2 | Exchange accepts the sell <br> order and reports an order <br> accepted event to CAT | Order Accepted Event: <br> type: EOA <br> exchange: Exch1 <br> eventTimestamp: <br> 20170307T134000.123456 | - The exchange accepts the <br> sell order and assigns it the <br> internal order ID: 10999. |
| The order type is a limit |  |  |  |
| order with time in force $=$ |  |  |  |
| day. |  |  |  |

| \# | Step | Reported Event | Comments |
| :---: | :---: | :---: | :---: |
|  |  | ```sequenceNumber: 12345 symbol: ABCD orderID: 10999 routingParty: FRMC routedOrderID: 2156 session: FRMC:123 side: Sell price: 157.20 quantity: 100 displayQty: 100 displayPrice: 157.20 workingPrice: 157.20 orderType: LMT timelnForce: DAY capacity: Agency nbbPrice: 157.00 nbbQty: 100 nboPrice: 157.25 nboQty: 100 member: Mem01``` | - The ID that was used by the member firm is included as the Routed Order ID <br> - The NBBO is as the exchange saw it just before accepting the order. Note that after accepting the order, the national best offer would change to account for this order, which is below the national best offer. |
| 3 | Member Firm FRMB Routes buy order for execution | NA | - A member firm FRMB routes a buy order to Exchange "Exch1" over session ID 7 with the order ID of 9150. This order is a buy order for the symbol ABCD, with a quantity of 100 |
| 4 | Exchange accepts the buy order and reports an order accepted event to CAT | Order Accepted Event: <br> type: EOA <br> exchange: Exch1 <br> eventTimestamp: <br> 20170307T134001.123456 <br> sequenceNumber: 19190 <br> symbol: ABCD <br> orderID: 20263 <br> routingParty: FRMB <br> routedOrderID: 9150 <br> session: 7 <br> side: Buy <br> price: 157.20 <br> quantity: 100 <br> displayQty: 0 <br> workingPrice: 157.20 <br> orderType: LMT <br> timeInForce: DAY <br> capacity: Principal <br> nbbPrice: 157.00 <br> nbbQty: 100 <br> nboPrice: 157.20 <br> nboQty: 100 | - The exchange accepts the buy order and assigns it the internal order ID: 20263. ```

### 7.3. Order Route and Order Fill Event Example

This scenario illustrates the reporting requirements to CAT when an exchange routes an order to a routing broker-dealer for execution on an away exchange, and Exchange 1's subsequent reporting obligation on fills of the routed order.

In this scenario Exchange 1 receives and reports acceptance of an order, then routes the order to their routing broker dealer for execution on an away exchange. When an execution occurs on the away exchange, the routing broker reports the fill back to Exchange 1. The following events are reported:

1. Order Accepted Event of the original order,
2. The Order Route Event, and
3. The Order Fill Event.
4. Routes order for execution

Figure 6: Order Route and Order Fill Event Example

Table 66: Order Route and Order Fill Event Example

| \# | Step | Reported Event | Comments |
| :---: | :---: | :---: | :---: |
| 1 | Member Firm FRMA Routes buy order for execution | NA | A member firm routes a buy order to Exchange "Exch1" over session ID 3 with the order ID of 567890. This order is a buy order for the symbol ABCD, with a quantity of 200 at the price of 157.25 |
| 2 | Exchange accepts the buy order and reports an order accepted event to CAT | Order Accepted Event: <br> type: EOA <br> exchange: Exch1 <br> eventTimestamp <br> 20170307T144010.123456789 <br> sequenceNumber: 12345 <br> symbol: ABCD <br> orderID: 10001 <br> routingParty: FRMA <br> routedOrderID: 567890 <br> session: 3 <br> side: Buy <br> price: 157.25 <br> quantity: 200 <br> displayQty: 100 <br> displayPrice: 157.25 | - The exchange accepts the buy order and assigns it the internal order ID: 10001. The order type is a limit order with time in force $=$ day. <br> - The ID that was used by the member firm is included as the Routed Order ID <br> The NBBO is as the exchange saw it just before accepting the order. |

### 7.4. Order Restatement Example

This series of examples shows a restatement of a GTC order before market open the following day. Also it is assumed that a stock split on the symbol $A B C D$ has taken effect, and that this is reflected in the restatement.

Figure 7: Order Restatement Example

Table 67: Order Restatement Example
$\left.\begin{array}{|l|l|l|l|}\hline \# & \text { Step } & \text { Reported Event } & \text { Comments } \\ \hline 1 & \begin{array}{l}\text { Member Firm FRMA Routes } \\ \text { buy order for execution }\end{array} & \text { NA } & \begin{array}{l}\text { - A member firm routes a buy } \\ \text { order to Exchange "Exch1" } \\ \text { over session ID } 7 \text { with the } \\ \text { order ID of } 9153 \text {. This order } \\ \text { is a buy order for the symbol } \\ \text { ABCD, with a quantity of } \\ 500 \text { at the price of } 156.50\end{array} \\ \hline 2 & \begin{array}{l}\text { Exchange accepts the buy } \\ \text { order and reports an order } \\ \text { accepted event to CAT }\end{array} & \begin{array}{l}\text { Order Accepted Event: } \\ \text { type: EOA } \\ \text { exchange: Exch1 } \\ \text { eventTimestamp: } \\ \text { 20170307T134000.123456789 } \\ \text { sequenceNumber: } 11190 \\ \text { symbol: ABCD } \\ \text { orderID: 1201 } \\ \text { routingParty: FRMA }\end{array} & \begin{array}{l}\text { - The exchange accepts the } \\ \text { buy order and assigns it the } \\ \text { internal order ID: 1201. The } \\ \text { order type is a limit order } \\ \text { with time in force }=\text { GTC. }\end{array} \\ \text { (The ID that was used by the } \\ \text { member firm is included as } \\ \text { the Routed Order ID }\end{array}\right\}$

| \# | Step | Reported Event | Comments |
| :---: | :---: | :---: | :---: |
|  |  | routedOrderID: 9153 <br> session: 7 <br> side: Buy <br> price: 156.50 <br> quantity: 500 <br> displayQty: 500 <br> displayPrice: 156.50 <br> workingPrice: 156.50 <br> orderType: LMT <br> timelnForce: GTC <br> capacity: Agency <br> nbbPrice: 157.00 <br> nbbQty: 100 <br> nboPrice: 157.25 <br> nboQty: 100 <br> member: Mem01 | - The NBBO is as the exchange saw it just before accepting the order. |
| 3 | Corporate action takes effect |  | - A stock split event on the symbol ABCD takes effect 03/08/2017. This event has been reported to CAT by the listing exchange in its native CSV format since the corporate action was declared. |
| 4 | Exchanges restates open orders at the new trading day, reporting an Order Restatement Event taking the corporate action into account | Order Restatement Event <br> type: EORS <br> exchange: Exch1 <br> eventTimestamp: <br> 20170308T060000.123456789 <br> sequenceNumber: 11000 <br> symbol: ABCD <br> orderID: 1202 <br> originalOrderDate: 20170307 <br> originalOrderID: 1201 <br> side: Buy <br> price: 78.25 <br> quantity: 1000 <br> displayQty: 1000 <br> displayPrice: 78.25 <br> workingPrice: 78.25 <br> leavesQty: 1000 <br> orderType: LMT <br> timelnForce: GTC <br> capacity: Agency <br> member: Mem01 | - This example shows the restatement of the GTC order (Order ID 1201) at market open the following day. In this example we also assume that a hypothetical stock split corporate action on the symbol ABCD has taken effect, and that none of the order has been filled. <br> - Note that the Order ID can remain the same or be assigned anew, depending on how the exchange guarantees uniqueness within the same trading date. Also, the symbol mapping will possibly change from day to day. The symbol mapping for the new date is required. <br> - Note that the quantity of the order has been doubled, and the price has been halved to reflect the stock split. |

### 7.5. Order Modified Example

This section will show how an order modified event is reported when the order type is changed by the initiating member firm from a limit order to a market order. This series of events will follow the submission of a limit order from a member firm to the exchange that is subsequently modified by the member firm.

Figure 8: Order Modified Example

Table 68: Order Modified Example
$\left.\begin{array}{|l|l|l|l|}\hline \# & \text { Step } & \text { Reported Event } & \text { Comments } \\ \hline 1 & \begin{array}{l}\text { Member Firm Routes limit } \\ \text { order for Execution }\end{array} & & \begin{array}{l}\text { - A member firm routes an } \\ \text { order to Exchange Exch1 } \\ \text { over session ID 12 with the } \\ \text { order ID of 1112. This order } \\ \text { is a limit order for the } \\ \text { symbol ABCD, with a } \\ \text { quantity of 100 }\end{array} \\ \hline 2 & \begin{array}{l}\text { Exchange accepts the order } \\ \text { and reports an order } \\ \text { accepted event to CAT }\end{array} & \begin{array}{l}\text { Order Accepted Event: } \\ \text { type: EOA } \\ \text { exchange: Exch1 } \\ \text { eventTimestamp: } \\ \text { 20170402T093001.123456789 } \\ \text { sequenceNumber: } 1001 \\ \text { symbol: ABCD }\end{array} & \begin{array}{l}\text { - The exchange accepts the } \\ \text { order and assigns it the } \\ \text { internal order ID: } 98222 .\end{array} \\ \text { - This is order is a limit order } \\ \text { with a limit price of 10.03 }\end{array}\right\}$

### 7.6. Order Modified for because of Partial Fill at Away Exchange

This Example is for an Equity Order Modify event where the exchange routes the order to an away exchange with a better market, and partially executes. The Order Modified Event is for the liquidity returned to the exchange after a partial execution. This example is to show how to populate the routedOrderld in the Equity Order Modified event for this scenario.

Figure 9: Order Modified Event due to a fill at an away exchange example

Table 69: Order Modified Example 2

| $\#$ | Step | Reported Event | Comments |
| :--- | :--- | :--- | :--- |
| 1 | Member Firm Routes limit <br> order for Execution |  | - A member firm routes an <br> order to Exchange Exch1 <br> over session ID 12 with the <br> order ID of <br> ZUA7197070219. This order |

| \# | Step | Reported Event | Comments |
| :---: | :---: | :---: | :---: |

```

## 8. Options Exchange Event Examples

### 8.1. Quote and Quote Cancel Events

Some exchanges use the term "order" to cover both quotes and non-quote orders. For the purpose of reporting to CAT, a quote is to be interpreted as an order/quote that qualifies as a market maker quote for the purposes of satisfying Section 6.4(d)(iii) of the CAT NMS Plan. That is the section which grants relief to market makers from reporting their quotes to CAT, leaving the exchanges themselves with the sole responsibility of reporting quotes to CAT. If such order/quotes received by the exchange would provide the market maker an exemption from reporting the quote, then the order/quote must be reported to CAT as a quote, not an order.

CAT accepts both one-sided and two-sided quotes.

### 8.1.1.Two-Sided Quotes Example

The following section will provide examples of reportable events for a two-sided market maker quote when it is posted as a new quote, updated by the market maker, then canceled by the market maker or the exchange. Both the new quote and the updated quote are expressed by the Quote Event, while the quote cancel is expressed by the Quote Cancel Event.

Figure 13: Two-Sided Quote Example

Table 71: Two-Sided Quote Example

| \# | Step | Reported Event | Comments |
| :---: | :---: | :---: | :---: |
| 1 | Market maker sends twosided quote to the exchange | NA | - Market Maker sends updated two sided (buy/sell) quotes, updates them and cancels them |
| 2. | Exchange 1 posts the market maker quote | Quote Event <br> type: OQ <br> exchange: Exch1 <br> eventTimestamp: <br> 20170113T132436.124039 <br> sequenceNumber:1245 <br> marketMaker: ABCD:A16 <br> sentTimestamp: <br> 20170113T132436.123456 <br> optionID: 6779 <br> quoteID: Q9876 <br> onlyOneQuote: true, <br> bidPrice: 2.40 <br> bidQty: 10 <br> askPrice: 2.43 <br> askQty: 10 | - The quote is a two-sided quote for an option with the ID: 6779 <br> - The field market maker is the Member Alias assigned by the SRO to identify the market maker issuing the quote. In this case, the market maker ABCD has multiple users (e.g., acronyms used to differentiate users within the same MM), so the characters A16 denote the user or sub-account. <br> - The sent timestamp denotes when the market maker sent the quote to the marketplace, while the event timestamp is when the exchange received the quote |
| 3 | Market maker sends an update to the two sided quote to the exchange |  | - The market maker sends an update raising the bid price of the original quote to 2.41 |
| 4 | Exchange accepts the update and reports a quote event | Quote Event <br> type: OQ <br> exchange: Exch1 <br> eventTimestamp: <br> 20170113T132536.123486789 <br> sequenceNumber: 1278 <br> marketMaker: ABCD:A16 <br> sentTimestamp: <br> 20170113T132536.123456 <br> optionID: 6779 <br> quoteID: Q9941, <br> onlyOneQuote: true, <br> bidPrice: 2.41 <br> bidQty: 10 <br> askPrice: 2.43 <br> askQty: 10 | - The quote event reported by the exchange effectively replaces the former quote, assigning a new quote ID <br> - Note that the quote ID is new: Q9941. Because the MM has only one quote in this optionID, the originalQuoteID is not required. <br> - Bid Price is updated, however Bid Quantity, Ask Price, and Ask Quantity remain unchanged |
| 5a | Market maker initiates cancellation of the quote |  | - Market maker sends a cancellation notice of its quote to the exchange |

| \# | Step | Reported Event | Comments |
| :---: | :---: | :---: | :---: |
| 5b | Exchange receives the cancellation and reports an order cancellation event | Quote Cancel Event <br> type: OQC <br> exchange: Exch1 <br> eventTimestamp: <br> 20170113T133036.123486789 <br> sequenceNumber: 1299 <br> marketMaker: ABCD:A16 <br> sentTimestamp: <br> 20170113T133036.123456 <br> optionID: 6779 <br> quoteID: Q9941, <br> onlyOneQuote: true, <br> initiator: MarketMaker <br> cancelReason: ALL | - The value for cancel initiator must always be either market maker or exchange. <br> - The field cancel reason allows for more detail to explain the cancel. In this case ALL represents Market Maker canceled all quotes. Refer to the data dictionary for more possible values. |
| 6a/b | Exchange initiates cancellation of the quote | Quote Cancel Event <br> type: OQC <br> exchange: Exch1 eventTimestamp: 20170113T133105.123456789 <br> sequenceNumber: 1308 <br> marketMaker: ABCD:A16 <br> quoteID: Q9941, <br> onlyOneQuote: true, <br> initiator: Exchange <br> canceIReason: DIS | - This step represents an example where the exchange cancels the quote. <br> - There is no Sent Timestamp value because the event was initiated by the exchange, not the market maker. <br> - The field cancel reason allows for more detail to explain the cancel, possible values may be specified by the exchange. In this case DIS represents that the quote was canceled due to a lost connection. Refer to the data dictionary for more possible values |

### 8.1.1.1. JSON Examples

## Quote Event (Step 2)

```
{
"type": "OQ",
"exchange": "Exch1",

    "quoteID": "Q9941",
    "onlyOneQuote": true,
    "initiator": "Exchange",
    "cancelReason": "DIS"
}
```

### 8.1.2.One-Sided Quotes Example

The following section will provide examples of reported events for a one-sided market maker quote when it is posted as a new quote, updated by the market maker, then canceled by the market maker or the exchange. Both the new quote and the update are expressed by the Quote Event, while the quote cancel is expressed by the Quote Cancel Event.

Figure 14: One-Sided Quotes Example

Table 72: One-Sided Quotes Example

| \# | Step | Reported Event | Comments |
| :---: | :---: | :---: | :---: |
| 1 | Market maker sends onesided quote to the exchange | NA | - Market Maker sends onesided quotes, updates them and cancels them in that sequence |
| 2 | Exchange 1 posts the market maker quote | Quote Event <br> Type: OQ <br> Exchange ID: Exch1 <br> eventTimestamp: <br> 20170113T142036.123486789 <br> sequenceNumber: 1010 <br> marketMaker: EFGH:A1 <br> sentTimestamp: <br> 20170113T142036.123456 <br> optionID: 1208 <br> quoteID: Q123456 | - The quote is a one-sided quote for an option with the ID: 1208 <br> - The field market maker is the Member Alias assigned by the SRO to identify the market maker issuing the quote. In this case, the market maker EFGH has multiple users (e.g., acronyms used to differentiate users within the |

| \# | Step | Reported Event | Comments |
| :---: | :---: | :---: | :---: |
|  |  | onlyOneQuote: false bidPrice: 6.10 bidQty: 20 | same MM), so the characters A1 denote the user or sub-account. <br> - The sent timestamp denotes when the market maker sent the quote to the marketplace, while the event timestamp is when the exchange received the quote <br> - The option ID is the ID of the option as assigned by the exchange |
| 3 | Market maker sends an update to the one sided quote to the exchange |  | - The market maker sends an update raising the quantity of the original quote to 30 |
| 4 | Exchange accepts the update and reports a quote event | Quote Event <br> Type: OQ <br> Exchange ID: Exch1 <br> eventTimestamp: <br> 20170113T142536.123486789 <br> sequenceNumber: 1038 <br> marketMaker: EFGH:A1 <br> sentTimestamp: <br> 20170113T142536.123456 <br> optionID: 1208 <br> quoteID: Q22222 <br> originalQuoteID: Q123456 <br> onlyOneQuote: false <br> bidPrice: 6.10 <br> bidQty: 30 | - The quote event reported by the exchange effectively replaces the former quote, assigning a new quote ID <br> - Note that the quote ID is new: Q22222, while the former quote ID is included in the field Original Quote ID <br> - Bid Quantity is updated, however Bid price is unchanged |
| 5a | Market maker initiates cancellation of the quote |  | - Market maker sends a cancellation notice of its quote to the exchange |
| 5b | Exchange receives the cancellation and reports an order cancellation event | Quote Cancel Event <br> type: OQC <br> exchange: Exch1 <br> sentTimestamp: <br> 20170113T143036.123456 <br> eventTimestamp: <br> 20170113T143036.123486789 <br> sequenceNumber: 1142 <br> marketMaker: EFGH:A1 <br> optionID: 1208 <br> quoteID: Q22222 <br> onlyOneQuote: false <br> initiator: MarketMaker <br> cancelReason: ALL | - The value for cancel initiator must always be either market maker or exchange. <br> - The field cancel reason allows for more detail to explain the cancel. In this case ALLrepresents Market Maker canceled all quotes. Refer to the data dictionary for more possible values. |

    "member": "Mem01"
}
```

### 8.2.2.Complex Option Order Accepted Event Example

In the example below, the exchange only creates leg orders at the time an order is executed. Thus, an order on the complex option would have a report sent to CAT for an order accepted event at the parent
level of the complex order. Any leg reports would wait until the leg orders are actually created when a trade occurs.

The examples in this section will use an order on the complex option with optionID 9843. This hypothetical complex option has two option series legs:

## Complex Option - optionID: 9843

Table 74: Complex Option Order Example: Legs

| optionID | side | ratio | primaryDeliverable | expirationDate | strikePrice | putCall | exerciseStyle | settlement |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 1491 | Buy | 1 | XYZZY | 21 Oct 2017 | 30.00 | C | American | PM |
| 1492 | Sell | 1 | XYZZY | 21 Oct 2017 | 32.50 | C | American | PM |

For this example, we suppose at 192411.121456789 on April 20, 2017 an order was accepted for 10 units of complex option 9843 at net price -65 per unit.

Figure 16: Complex Option Order Example

Table 75: Complex Option Order Example

| $\#$ | Step | Reported Event | Comments |
| :--- | :--- | :--- | :--- |
| 1 | Market maker sends <br> complex option order to the <br> exchange | NA | - The order is routed over <br> session ID 7, with a price of <br> -65, quantity of 10, for the <br> option defined by the <br> exchange as Option ID <br> 9843 |
| 2 | Exchange 1 accepts the <br> complex option order |  |  |

| \# | Step | Reported Event | Comments |
| :---: | :---: | :---: | :---: |
| 3 | Exchange 1 reports a complex option order accepted event. <br> Leg events are not reported until an execution happens, so the only event reported at this time is for the complex option order. | Complex Option Order Accepted Event <br> type: OCOA <br> exchange: Exch1 <br> eventTimestamp: <br> 20170420T142411.121456789 <br> sequenceNumber: 909 <br> optionID: 9843 <br> orderID: 8473692 <br> side: AsDirected <br> routingParty: FRMA <br> routedOrderID: 4567123 <br> session: 7 <br> price: -65.00 <br> quantity: 10 <br> timeInForce: DAY <br> member: Mem01 | - The option ID is the ID of the option as assigned by the exchange. <br> - The Order ID is the ID of the order as assigned by the exchange, while the routed order ID is the order ID as defined by the member firm. |

### 8.4. Simple Option Order Modified Event Created As a Result of Partial Execution at Away Exchange

This example shows how to populate the Simple Option Order Modify Event in the scenario where an order is routed to an away exchange. At the away exchange, the order is partially executed, leaving quantity returned to the exchange for the order. The Option Order Modify event is created showing this change in order quantity.

Figure 18: Simple Option Order Modification Event due to execution at away exchange

| $\#$ | Step | Reported Event | Comments |
| :--- | :--- | :--- | :--- |
| 1 | Member firm sends option <br> order to the exchange | NA | - The order is routed over <br> session ID 3, with a price of <br> 18.59, quantity of 10, for the <br> option defined by the <br> exchange as Option ID <br> 1208 |

### 8.6. Complex Options Trade Events Examples

In all cases, complex option trades are reported to CAT only at the leg level. There is no roll-up trade reported at the complex order level. For example, an order on the complex option (ID 9851) below would have had corresponding orders reported to CAT for each of the underlying legs. As the following examples will show, trades on this complex option will report by leg, with each leg trade event corresponding to an order event on the leg that is in turn attached to a parent-level complex order event.

## Complex Option - optionID: 9851

Table 77: Complex Options Trade Events Example: Legs

| optionID | side | ratio | primaryDeliverable | expirationDate | strikePrice | putCall | exerciseStyle | settlement |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 1491 | Buy | 1 | XYZZY | 21 Oct 2017 | 30.00 | C | American | PM |
| 1492 | Sell | 1 | XYZZY | 21 Oct 2017 | 32.50 | C | American | PM |
| XYZZY | Buy | 100 |  |  |  |  |  |  |

This section follows a series of trade events on the complex option described above, along with examples of the quotes and orders that would be referenced in those trades.

- A new market maker quote is posted for the option leg 1491
- A new market maker quote is posted for the option leg 1492
- An order is placed for quantity 10 of the complex option 9851
- A trade on the first option leg 1491 is reported (10 contracts)
- A trade on the second option leg 1492 is reported (10 contracts)
- A fill on the stock leg XYZZY is reported ( 1,000 shares)

}
```

## 9. Submission Process

This section has been removed for security purposes.

## 10. Feedback and Corrections

This section has been removed for security purposes.

## 11. Testing

This section has been removed for security purposes.

## 12. Additional Information

Additional information is available from the CAT Public Website or the Service Desk. Details are provided below.

### 12.1. Public Website

Public Website (http://www.catnmsplan.com) is to provide primary information about CAT. The content includes: Link to SEC Rule 613, Press Releases, Technical Specifications, User Manuals, FAQs, Training Materials and Contact info.

### 12.2. FINRA CAT Help Desk

The FINRA CAT Helpdesk is the primary source for answers to questions about CAT, including questions regarding: clock synchronization, firm reporting responsibilities, interpretive questions, technical specifications for reporting to CAT and more. The FINRA CAT Helpdesk can be reached by phone at 888-696-3348 or e-mail at help@finracat.com.

## Appendices

## Appendix A. Clock Synchronization Requirement

In previous sections, details are described regarding the Order Events and data elements. Timestamp, as one of the required data elements for each order event, must be correctly recorded by Participants at a predefined granularity. This section provides detailed requirements and a recommended approach on how Participants should manage clock synchronization.

In order to comply with CAT NMS Plan requirements of Clock Synchronization and correctly record the Timestamp fields for order events, Participants are required synchronize Business Clocks, at a minimum, to within 100 microseconds of the time maintained by the National Institute of Standards and Technology (NIST).

The tolerance includes:

- Difference between the NIST standard and a time provider's clock;
- Transmission delay from the source; and
- Amount of drift in the Participant's clock.

In order to ensure the accuracy of timestamps for Reportable Events, Participants are anticipated to adopt policies and procedures to verify such required synchronization each Trading Day (1) before the market opens, and (2) periodically throughout the Trading Day. Participants are recommended to keep documentation which provides details of their Business Clock synchronization process, and the resulting log files from the implementation of such processes.

Any time provider and technology may be used for clock synchronization as long as the Business Clocks are in compliance with the accuracy requirement.

If additional details are needed, please refer to the Clock Synchronization User Guide to be published separately.

Note: The tolerance for clock synchronization does not impact the amount of time allowed for CAT reporting. CAT does NOT require reporters to report order information within 100 microseconds of receiving an order.

## Appendix B. Error Codes

An error code is a machine-parseable description of why a file or record was rejected. This differs from an error description, which is intended for human consumption. The following is a listing of errors codes for data ingestion and linkage processing.

## B.1. Data Ingestion Errors

The tables below contain error messages that are associated with Data Ingestion.

Table 79: Ingestion Error Codes

| $\#$ | Error Prefix | Error <br> Code | Error Code <br> Description | Explanation | Warning/ <br> Error |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | OE.INGEST,MD.REC, <br> OD.REC, MMD.REC, <br> FT.INGEST, OTH.REC, <br> RME.INGEST, BBO.INGEST | .010 | Required field is <br> missing | Required field is missing | ERROR |
| 2 | OE.INGEST,MD.REC, <br> OD.REC, MMD.REC, <br> FT.INGEST, OTH.REC, <br> RME.INGEST, BBO.INGEST | .020 | Numeric value <br> expected | Bad value for a numeric data <br> type | ERROR |
| 3 | OE.INGEST, MD.REC, <br> OD.REC, MMD.REC, <br> FT.INGEST, OTH.REC, <br> RME.INGEST, BBO.INGEST | .030 | Integer Value <br> expected | Bad value for an integer | ERROR |
| 4 | OE.INGEST, MD.REC, <br> OD.REC, MMD.REC, <br> FT.INGEST, OTH.REC, <br> RME.INGEST, BBO.INGEST | .040 | Unsigned Integer <br> expected | Bad value for an unsigned <br> integer | ERROR |
| 5 | OE.INGEST, MD.REC, <br> OD.REC, MMD.REC, <br> FT.INGEST, OTH.REC, <br> RME.INGEST, BBO.INGEST | .050 | Boolean Value <br> expected | Bad value for a Boolean | ERROR |
| 6 | OE.INGEST, MD.REC, <br> OD.REC, MMD.REC, <br> FT.INGEST, OTH.REC, <br> RME.INGEST, BBO.INGEST | .060 | Invalid JSON <br> format | Not in JSON format | ERROR |
| 7 | OE.INGEST, MD.REC, <br> OD.REC, MMD.REC, <br> FT.INGEST, OTH.REC, <br> RME.INGEST, BBO.INGEST | .070 | Exceeds <br> maximum length <br> of field | Invalid character length of a text <br> or alpha numeric data type | ERROR |
| 8 | OE.INGEST, MD.REC, <br> OD.REC, MMD.REC, <br> FT.INGEST, OTH.REC, <br> RME.INGEST, BBO.INGEST | .080 | Invalid |  |  |
| Timestamp |  |  |  |  |  |
| Format |  |  |  |  |  |

| \# | Error Prefix | Error Code | Error Code Description | Explanation | Warning/ Error |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST |  | Format |  |  |
| 11 | OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME. INGEST, BBO.INGEST | . 100 | Value is not listed as a valid choice | Value is not listed as a valid choice | ERROR |
| 12 | OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST | . 110 | JSON record has invalid Field Name | JSON record has invalid Field Name | ERROR |
| 13 | OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST | . 120 | Text or alphanumeric type has an illegal character | Text or alphanumeric type has an illegal character | ERROR |
| 14 | OE.INGEST, MD.REC, <br> OD.REC, MMD.REC, <br> FT.INGEST, OTH.REC, RME. INGEST, BBO.INGEST | . 130 | Invalid name value pair data | NameValue value does not follow documented format | ERROR |
| 15 | OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME. INGEST, BBO.INGEST | . 140 | Numeric value is missing required fraction digits | Numeric value is missing required fraction digits | ERROR |
| 16 | OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME. INGEST, BBO.INGEST | . 150 | Numeric value is missing required whole digits | Numeric value is missing required whole digits | ERROR |
| 17 | OE.INGEST, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST | . 160 | CSV record has invalid number of fields | When, for tokenizing, a CSV line results in less tokens than required. | ERROR |
| 18 | OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST | . 170 | Number of rows with errors exceed 10\% of Row Count of Data File | Number of errors exceed 10\% of Row Count of Data File | ERROR |
| 19 | OE.INGEST, FT.INGEST, RME.INGEST, BBO.INGEST | . 180 | Record Offset referenced in Correction file is Invalid | Record Offset referenced in Correction file is Invalid | ERROR |
| 20 | OE.COUNT, MD.COUNT, OD.COUNT, MMD.COUNT, FT.COUNT, OTH.COUNT, RME.INGEST, BBO.INGEST | . 190 | File Record Count does not match metadata | File Record Count does not match metadata | ERROR |
| 21 | INT.META | . 200 | Mismatch in meta file | Mismatch in Metadata as compared to file name | ERROR |
| 22 | OE.INGEST, FT.INGEST, RME.INGEST, BBO.INGEST | . 210 | Invalid Symbol | Equity Symbol is Incorrect | WARNING |
| 23 | OE.INGEST, MD.REC, MMD.REC, RME.INGEST, BBO.INGEST | . 220 | Invalid Member ID | Member ID is invalid | WARNING |
| 24 | FILE.NAME | . 230 | File Name is | File Name is Invalid (Invalid Format, Duplicate, File Name | ERROR |

| \# | Error Prefix | Error Code | Error Code Description | Explanation | Warning/ Error |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Invalid | too Long, File Name for future date) |  |
| 25 | INT.META | . 240 | Replacement File Not Permitted | A replacement file for OrderEvents, <br> FinraTransactions, and RejectMessageEvents file kinds is not permitted after T+4 @ 8:00 a.m. ET. | ERROR |
| 26 | OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST | . 250 | Unknown message type | The message type specified in the record is unknown | ERROR |
| 27 | OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME. INGEST, BBO.INGEST | . 260 | Sub-fields in Name/Value have value errors | Sub-fields in Name/Value have value errors | ERROR |
| 28 | OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME. INGEST, BBO.INGEST | . 270 | Invalid array value for declared type | Invalid array value for declared type | ERROR |

## B.2. Reference Data Validation Errors

FINRA CAT will begin validating reference data at a later time.
The tables below contain error messages that are associated with Reference Data Validation.

Table 81: MemberDictionary Member Reference Data Validation Error Codes

The following reference data errors may be generated for a MemberDictionary file when invalid conditions are detected within the file. To resolve these errors, the Participant must provide a replacement MemberDictionary file with the correct information.

| \# | Error Prefix | Error <br> Code | Error Code <br> Description | Explanation | Warning/ <br> Error |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | MD.REF | .500 | Member Alias <br> assigned to <br> multiple Firms | Event(s): MDE <br> A memberAlias may not be <br> assigned to more than one Firm <br> (ID) for the same exchange and <br> trade date. | ERROR |
| 2 | MD.REF | .510 | Member Details <br> provided for <br> missing Member <br> Alias | Event(s): MADE <br> Each memberAlias reported on <br> a MADE record must correspond <br> to a memberAlias reported on <br> an MDE record for the same <br> exchange and trade date. |  |

Table 82: MarketMakerDictionary Member Reference Data Validation Error Codes

The following reference data errors may be generated for a MarketMakerDictionary file when the provided member alias data does not exist in the Member Dictionary or the provided symbol is invalid.

If the error was caused by incorrect data submitted in the MemberDictionary file, the Participant must:
a) submit a replacement MemberDictionary file with the correct information

AND
b) submit a replacement MarketMakerDictionary file for reprocessing.

If the error was caused by incorrect data submitted in the MarketMakerDictionary file, the participant must:
a) submit a replacement MarketMakerDictionary file with the correct information.

If the error was caused by an incorrect symbol, the Participant must:
a) Determine if the symbol that was provided was correct.
b) If the symbol provided by the Participant was correct and should be in the Equity Symbol Master, contact the FINRA CAT Helpdesk for assistance in resolving the issue.
c) If the symbol provided by the Participant was incorrect, submit corrected records for reprocessing.

| \# | Error Prefix | Error <br> Code | Error Code <br> Description | Explanation | Warning/ <br> Error |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | MMD.REF | .520 | Market Maker <br> not found in <br> Member <br> Dictionary | Event(s): MMDE <br> The marketMaker is invalid. The <br> marketMaker must correspond <br> to a valid memberAlias in the <br> Member Dictionary for the same <br> exchange and trade date. | ERROR |
| 2 | MMD.REF | .530 | Invalid Symbol | Event(s): MMDE <br> The symbol is invalid. The <br> symbol must correspond to a <br> valid symbol for the same trade <br> date. |  |

Table 83: OrderEvents Member Reference Data Validation Error Codes

The following reference data errors may be generated for an OrderEvents file when the provided member alias does not exist in the Member Dictionary or the provided symbol/option ID is invalid.

If the error was caused by incorrect data submitted in the MemberDictionary file, the Participant must:
a) submit a replacement MemberDictionary file with the correct information AND
b) resubmit the rejected OrderEvents records using the corrections/replacement process described in Section 10.9.

If the error was caused by incorrect data submitted in the OptionsDictionary file, the Participant must:
a) submit a replacement OptionsDictionary file with the correct information AND
b) resubmit the rejected OrderEvents records using the corrections/replacement process described in Section 10.9.

If the error was caused be incorrect data submitted in the OrderEvents file, the participant must:
a) resubmit the rejected OrderEvents records using the corrections/replacement process described in Section 10.9.

If the error was caused by an incorrect symbol, the Participant must:
a) Determine if the symbol that was provided was correct.
b) If the symbol provided by the Participant was correct and should be in the Equity Symbol Master, contact the FINRA CAT Helpdesk for assistance in resolving the issue.
c) If the symbol provided by the Participant was incorrect, submit corrected records for reprocessing.

| \# | Error Prefix | Error Code | Error Code Description | Explanation | Warning/ Error |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | OE.REF | . 540 | Market <br> Maker not found in Member Dictionary | Event(s): OQ, OQC <br> The marketMaker is invalid. The marketMaker must correspond to a valid memberAlias in the Member Dictionary for the same exchange and trade date. | ERROR |
| 2 | OE.REF | . 545 | Member not found in Member Dictionary | Event(s): All Equities and Options Events that include member <br> The member is invalid. The member must correspond to a valid memberAlias in the Member Dictionary for the same exchange and trade date. | ERROR |
| 3 | OE.REF | . 550 | Routing <br> Party not found in Member Dictionary | Event(s): All Equities and Options Events that include routingParty The routingParty is invalid. The routingParty must correspond to a valid memberAlias in the Member Dictionary for the same exchange and trade date. | ERROR |
| 4 | OE.REF | . 555 | Floor Broker not found in Member Dictionary | Event(s): OT <br> The floorBroker is invalid. The floorBroker must correspond to a valid memberAlias in the Member Dictionary for the same exchange and trade date. | ERROR |

| $\#$ | Error Prefix | Error <br> Code | Error Code <br> Description | Explanation | Warning/ <br> Error |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 5 | OE.REF | .560 | Invalid <br> Symbol | Event(s): All Equity Events, STE <br> The symbol is invalid. The symbol <br> must correspond to a valid symbol <br> for the same trade date. | ERROR |
| 6 | OE.REF | .565 | Option ID not <br> found in <br> Options <br> Dictionary | Event(s): All Option Events, STE <br> The option ID/ complexOption ID <br> must correspond to a valid optionID <br> in the Options Dictionary (provided <br> via an OSDE or CODE record) for the <br> same exchange and trade date. | ERROR |

Table 84: FinraTransactions Reference Data Validation Error Codes

The following reference data errors may be generated for a FinraTransactions file when the provided member alias data does not exist in the Member Dictionary or the provided symbol is invalid.

If the error was caused by incorrect data submitted in the MemberDictionary file, the Participant must:
a) submit a replacement MemberDictionary file with the correct information AND
b) resubmit the rejected FinraTransactions records using the corrections/replacement process described in Section 10.9.

If the error was caused be incorrect data submitted in the FinraTransactions file, the participant must:
a) resubmit the rejected FinraTransactions records using the corrections/replacement process described in Section 10.9.

If the error was caused by an incorrect symbol, the Participant must:
a) Determine if the symbol that was provided was correct.
b) If the symbol provided by the Participant was correct and should be in the Equity Symbol Master, contact the FINRA CAT Helpdesk for assistance in resolving the issue.
c) If the symbol provided by the Participant was incorrect, submit corrected records for reprocessing.

| $\#$ | Error Prefix | Error <br> Code | Error Code <br> Description | Explanation | Warning/ <br> Error |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | FT.REF | .570 | Reporting <br> Executing <br> MPID not <br> found in <br> Member <br> Dictionary | Event(s): TRF <br> The reportingExecutingMpid is <br> invalid. The <br> reportingExecutingMpid must <br> correspond to a valid memberAlias <br> in the Member Dictionary for the <br> same exchange and execution date. | ERROR |
| 2 | FT.REF | .575 | Contra <br> Executing <br> MPID not <br> found in <br> Member <br> Dictionary | Event(s): TRF <br> The contraExecutingMpid is <br> invalid. The <br> contraExecutingMpid must <br> correspond to a valid memberAIias <br> in the Member Dictionary for the <br> same exchange and execution date. | ERROR |
| 3 | FT.REF | .580 | Invalid <br> Symbol | Event(s): TRF <br> The symbol is invalid. The symbol <br> must correspond to a valid symbol <br> for the same execution date (for TRF <br> events). |  |

Table 85: OTCHalts Reference Data Validation Error Codes

The following reference data errors may be generated for an OTCHalts file when the provided symbol is invalid.

If the error was caused by an incorrect symbol, the Participant must:
a) Determine if the symbol that was provided was correct.
b) If the symbol provided by the Participant was correct and should be in the Equity Symbol Master, contact the FINRA CAT Helpdesk for assistance in resolving the issue.
c) If the symbol provided by the Participant was incorrect, submit a replacement OTCHalts file with the correct information.

| $\#$ | Error Prefix | Error <br> Code | Error Code <br> Description | Explanation | Warning/ <br> Error |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | OTH.REF | .590 | Invalid Symbol | Event(s): FHR <br> The symbol is invalid. The <br> symbol must correspond to a <br> valid symbol for the same trade <br> date. | ERROR |

## B. 3 Linkage Discovery Errors

Linkage Discovery errors are generated by performing event comparisons that result in the identification of unlinked events. See §10.10 for information on the Linkage Discovery process.

Unlinked error codes are assigned based on a processing order when determining the reason for an unlinked event. The process begins with the check associated with the codes having the lowest sequence value. When the "Multiple Fields did not Match" reason is assigned, it is because a determination could not be made. In such cases, it is possible that the unlink reason is because the other party's event was not reported or had a processing error which prevented the event from participating in Linkage Discovery. In cases when linkage did not occur between venues, separate error codes will be assigned to the CAT Reporter whose record did not link and the CAT Reporter that was named.

Table 86: Duplicate Record Error Codes

| $\#$ | Error Prefix | Error <br> Code | Error Code <br> Description | Explanation | Warning/ <br> Error |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | OE.INTRAEXCHLNK | .301 | Duplicate <br> Event | Event(s): All Equity and Option Events, FHR, <br> TRF <br> The Exchange or FINRA event has already <br> been received by CAT. The first instance of <br> the event is retained; all subsequent <br> submissions are rejected. This rejection is not <br> repairable. | WARNING |

Table 87: Intravenue Linkage Error Codes

| $\#$ | Error Prefix | Error <br> Code | Error Code <br> Description | Explanation | Warning/ <br> Error |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | OE.INTRAEXCHLNK | .5000 | Missing a parent | The event in question does not have a <br> required parent. | ERROR |
| 2 | OE.INTRAEXCHLNK | .5001 | Trade Event - <br> Order/Quote not <br> found | The Trade Event side details <br> reference an Order Key/Quote Key <br> that does not exist in CAT because it <br> was not reported or was rejected. | ERROR |
| 3 | OE.INTRAEXCHLNK | .5002 | Paired Orders - <br> Corresponding <br> Paired Order Not <br> found | The paired order in orderAttributes <br> name/value pair does not match <br> another order. | ERROR |
| 4 | OE.INTRAEXCHLNK | .5003 | Originating event not <br> found for long Lived <br> order | This is for the order restatement event <br> errors specifically. Occurs if OORS <br> event is received, and the events from <br> the previous day(s) are not found. | ERROR |
| 5 | OE.INTRAEXCHLNK | .5004 | Matching trade not <br> found | A post trade allocation/supplemental <br> trade event refers to a trade that <br> cannot be located | ERROR |

| \# | Error Prefix | Error <br> Code | Error Code <br> Description <br> 6 | OE.INTRAEXCHLNK | .5005 |
| :--- | :--- | :--- | :--- | :--- | :--- |

Table 88: Intervenue Linkage Error Codes (Reported by Exchange/Display-Only Facility)

| $\#$ | Error Prefix | Error <br> Code | Error Code <br> Description | Explanation | Warning/ <br> Error |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | OE.INTERVENUELNK | .6004 | routedOrderID not <br> found | The routedOrderID on the exchange <br> Order Route/Order Accept/Equity Best <br> Bid and Offer event does not match to a <br> corresponding routedOrderID on the <br> industry member order | ERROR |
| 2 | OE.INTERVENUELNK | .6006 | routingParty did <br> not match | A matching routedOrderID was <br> identified; however, the routedOrderID <br> on the exchange Order Route/Order <br> Accept/Equity Best Bid and Offer event <br> does not match to a corresponding <br> senderIMID on the industry member <br> order | ERROR |
| 3 | OE.INTERVENUELNK | .6008 | symbol did not <br> match | A matching routedOrderID was <br> identified, however the symbol [for equity | ERROR |

| \# | Error Prefix | Error Code | Error Code Description | Explanation | Warning/ Error |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | OR optionID did not match | events] or optionID [for option events] on the exchange Order Route/Order Accept/Equity Best Bid and Offer event does not match to a corresponding symbol or optionID on the industry member order |  |
| 4 | OE.INTERVENUELNK | . 6010 | session did not match | A matching routedOrderID was identified, however, the session on the exchange Order Route/Order Accept/Equity Best Bid and Offer event does not match to a corresponding session on the industry member order | ERROR |
| 5 | OE.INTERVENUELNK | . 6012 | Multiple fields did not match | A matching routedOrderID was identified, however, the symbol, senderIMID or a combination of fields on the exchange Order Route/Order Accept/Equity Best Bid and Offer event does not match to corresponding field(s) on the industry member order | ERROR |
| 6 | OE.INTERVENUELNK | . 6014 | destination did not match | A matching routedOrderID was identified in an industry member order; however, the ExchangeID on the Order Route/Order Accept/Equity Best Bid and Offer event did not match the destination on the corresponding industry member order. | ERROR |
| 7 | OE.INTERVENUELNK | . 6016 | Duplicate Route Linkage Key on Route to Firm | Unlinked due to duplicated Route Linkage Key on an outbound Route from an Exchange. | ERROR |
| 8 | OE.INTERVENUELNK | . 6018 | Duplicate Route Linkage Key on Accept/Modify | Unlinked due to a duplicated Route Linkage Key on an Accept/Modify/Equity Best Bid and Offer event even from an Exchange. | ERROR |
| 9 | OE.INTERVENUELNK | . 6020 | Duplicate <br> Exchange/Firm Trade Key | More than one Trade event was reported with the same Exchange/Firm Trade Key on the current CAT Processing Date. All events associated with the duplicate Exchange/Firm Trade Key will be rejected. | ERROR |
| 10 | OE.INTERVENUELNK | . 6022 | tapeTradeID did not match | The MOOTLINK value (provided via the executionCodes MOOTLINK Name/Value pair) on the exchange Option Trade event does not match to a corresponding tapeTradeID on the industry member trade. Effective December 5, 2022. | ERROR |
| 11 | OE.INTERVENUELNK | . 6024 | marketCenterID did not match | A matching tapeTradeID was identified, however, the exchangeID on the exchange Option Trade event does not match to a corresponding marketCenterID on the industry member trade. Effective December 5, 2022. | ERROR |
| 12 | OE.INTERVENUELNK | . 6026 | side in buyDetails | A matching tapeTradeID was identified, however, the side in buyDetails on the | ERROR |

| $\#$ | Error Prefix | Error <br> Code | Error Code <br> Description | Explanation | Warning/ <br> Error |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  | did not match | exchange Option Trade event does not <br> match to a corresponding side in <br> buyDetails on the industry member <br> trade. Effective December 5, 2022. |  |
| 13 | OE.INTERVENUELNK | .6028 | side in selIDetails <br> did not match | A matching tapeTradeID was identified, <br> however, the side in sellDetails on the <br> exchange Option Trade event does not <br> match to a corresponding side in <br> sellDetails on the industry member <br> trade. Effective December 5, 2022. | ERROR |

Table 89: Intervenue Linkage Error Codes (Reported by Firm)

| $\#$ | Error Prefix | Error <br> Code | Error Code <br> Description | Explanation | Warning/ <br> Error |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | OE.INTERVENUELNK | .7005 | Named <br> routedOrderID not <br> found | The routedOrderID reported by the <br> Industry Member on the Order Route <br> event does not match to a <br> corresponding routedOrderID on the <br> exchange order/Equity Best Bid and <br> Offer event. | ERROR |
| 2 | OE.INTERVENUELNK | .7007 | Named <br> routingParty did <br> not match | A matching routedOrderID was <br> identified; however, the senderIMID on <br> industry member order did not match <br> the routingParty on the exchange <br> order/Equity Best Bid and Offer event. | ERROR |
| 3 | OE.INTERVENUELNK | .7009 | Named symbol <br> did not match <br> OR <br> Named optionID <br> did not match | A matching routedOrderID was <br> identified, however the symbol [for <br> equity events] or optionID [for option <br> events] did not match on the <br> corresponding symbol/optionID on the <br> exchange order/Equity Best Bid and <br> Offer event. | ERROR |
| 4 | OE.INTERVENUELNK | .7011 | Named session <br> did not match | A matching routedOrderID was <br> identified, however, the session did not <br> match the session on the corresponding <br> exchange order/Equity Best Bid and <br> Offer event. | ERROR |
| 5 | OE.INTERVENUELNK | .7013 | Named Multiple <br> fields did not <br> match | A matching routedOrderID was <br> identified, however, the symbol, <br> senderIMID or a combination of fields <br> reported on the Order Route event did <br> not match the symbol or routingParty on <br> the corresponding exchange <br> order/Equity Best Bid and Offer event. |  |
|  |  | 7015 | Named <br> destination did not <br> match | Named in an industry member order but <br> the destination on the industry member <br> order route did not match the <br> ExchangeID reported on the <br> corresponding Order Route event/Equity <br> Best Bid and Offer event. | ERROR |

| $\#$ | Error Prefix | Error <br> Code | Error Code <br> Description | Explanation | Warning/ <br> Error |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 7 | OE.INTERVENUELNK | .7017 | Named <br> tapeTradeID did <br> not match | The tapeTradeID reported by the <br> Industry Member on the Trade event did <br> not match the unique identifier (e.g. <br> MOOTLINK) provided on the exchange <br> trade. | Error |
| 8 | OE.INTERVENUELNK | .7019 | Named <br> marketCenterID <br> did not match | A matching tapeTradeID was identified; <br> however, the marketCenterID reported <br> on the Industry Member Trade event did <br> not match the exchange ID on the <br> exchange Trade Event. | Error |
| 9 | OE.INTERVENUELNK | .7021 | Named side in <br> buyDetails did not <br> match | A matching tapeTradeID was identified; <br> however, the side reported on the buy <br> side of the Industry Member Trade <br> event did not match the side on the <br> exchange Trade Event. | Error |
| 10 | OE.INTERVENUELNK | .7023 | Named side in <br> sellDetails did not <br> match | A matching tapeTradeID was identified; <br> however, the side reported on the sell <br> side of the Industry Member Trade <br> event did not match the side on the <br> exchange Trade Event. | Error |

Table 90: Off-Exchange Trade Linkage Error Codes (Reported by Exchange)

| $\#$ | Error Prefix | Error <br> Code | Error Code <br> Description | Explanation | Warning/ <br> Error |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | OE.TRADELNK | .4002 | Matching <br> tapeTradeID <br> cannot be found | The unique identifier (e.g., Branch Sequence <br> Number, Compliance ID) provided on the <br> TRF/ADF/ORF Trade Report did not match the <br> tapeTradeID reported by the Industry Member <br> on a Trade event | ERROR |
| 2 | OE.TRADELNK | .4004 | marketCenterld <br> cannot be found | A matching tapeTradeID was identified, but <br> Market Center Id provided on the TRF/ADF/ORF <br> Trade Report did not match the marketCenterld <br> reported by the Industry Member on a Trade <br> event | ERROR |
| 3 | OE.TRADELNK | .4006 | symbol cannot be <br> found | A matching tapeTradeID was identified, but the <br> symbol provided on the TRF/ADF/ORF Trade <br> Report did not match the symbol reported by the <br> Industry Member on a Trade event | ERROR |
| 4 | OE.TRADELNK | .4010 | Reporting or <br> Contra IMID <br> cannot be found | A matching tapeTradeID was identified, but the <br> Reporting or Contra IMID provided on the <br> TRF/ADF/ORF Trade Report did not match the <br> CATReporterIMID reported by the Industry <br> Member on a Trade event | ERROR |
| 5 | OE.TRADELNK | .4012 | Multiple fields did <br> not match | A TRF/ADF/ORF Trade Report with a matching <br> unique identifier (e.g. Branch Sequence <br> Number) was found however symbol, <br> MarketCenterID, CATReporterIMID or a <br> combination of fields provided on the <br> TRF/ADF/ORF Trade Report did not match the | ERROR |

Table 91: Off-Exchange Trade Linkage Error Codes (Reported by TRF)

| $\#$ | Error Prefix | Error <br> Code | Error Code <br> Description | Explanation | Warning/ <br> Error |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | OE.TRADELNK | .5003 | Named - Matching <br> tapeTradeID cannot <br> be found | The tapeTradeID reported by the Industry <br> Member on a Trade event did not match to a <br> corresponding tapeTradeID Compliance ID in <br> the TRF/ADF/ORF Trade Report | ERROR |
| 2 | OE.TRADELNK | .5005 | Named - <br> marketCenterld <br> cannot be found | A matching tapeTradeID was identified, but <br> marketCenterld reported by Industry Member <br> did not match the Execution Time on the <br> TRF/ADF/ORF trade report | ERROR |
| 3 | OE.TRADELNK | .5007 | Named - symbol <br> cannot be found | A matching tapeTradeID was identified, but <br> the symbol reported by Industry Member did <br> not match the symbol on the TRF/ADF/ORF <br> trade report | ERROR |
| 4 | OE.TRADELNK | .5009 | Named - Multiple <br> fields did not match | A TRF/ADF/ORF Trade Report with a <br> matching unique identifier (such as Branch <br> Sequence Number) was found however <br> symbol, MarketCenterID, CATReporterIMID <br> or a combination of fields reported by Industry <br> Member did not match to the corresponding <br> fields on the TRF/ADF/ORF trade report | ERROR |
| 5 | OE.TRADELNK | .5011 | Named - <br> CATReporterIMID <br> cannot be found | A matching tapeTradeID was identified, but <br> the CATReporterIMID reported by Industry <br> Member did not match the Reporting or <br> Contra IMID on the TRF/ADF/ORF trade <br> report | ERROR |

## B.4. Error Prefix Definition

Table 92: Error Prefix Definitions

| $\#$ | Error Prefix | Definition |
| :--- | :--- | :--- |
| 1 | FILE.NAME | File name validation errors |
| 2 | FILE.TIMEOUT | Data and corresponding acknowledgement |
| 3 | FT.INGEST | Error on FINRA TRF/ADF/ORF file validation |
| 4 | BBO.INGEST | Error on Best Bid and Offer file validations. |
| 5 | FT.REF | Member or Symbol Reference Date validation error on FinraTransactions <br> file |
| 6 | INT.META | Error on metadata file validation against its corresponding data file name. |

| 7 | MD.REC | Error on Member Dictionary file validation |
| :--- | :--- | :--- |
| 8 | MD.REF | Member Reference Data validation error on MemberDictionary file |
| 9 | OD.REC | Error on Options Dictionary file validation |
| 10 | MMD.REC | Error on Market Maker Dictionary file validation |
| 11 | MMD.REF | Member or Symbol Reference Data validation error on <br> MarketMakerDictionary file |
| 12 | OE.INGEST | Error on Order Events file validation |
| 13 | OE.INTRAEXCHLNK | Error or warning in Order Events during Intra Exchange Linkage Validation |
| 14 | OE.INTERVENUELNK | Error during linkage between Industry Member Order Events and <br> Exchange Order Events (applicable to option and equity exchanges) |
| 15 | OE.TRADELNK | Error during linkage between Industry Member Order Events and TRF <br> reported data |
| 16 | OE.REF | Member, Symbol, or OptionID Reference Data validation error on <br> OrderEvents file |
| 17 | OTH.REC | Error on OTC Halts/Resumes file validation |
| 18 | OTH.REF | Symbol Reference Data validation on OTCHalts file |

## Appendix C. Placeholder

The previous content of Appendix $C$ has been removed because it is not applicable to the FINRA CAT Plan Participant Technical Specifications. The heading is being retained to maintain the structure of the Appendix. This section may be repurposed in the future.

## Appendix D. CAT Date Definitions and Reporting Guidelines

The following key date terms are used throughout the document for reporting instructions:
Table 93: Key Date Terms

| Term | Definition | Usage |
| :---: | :---: | :---: |
| Event Timestamp | The date and time the event occurred. | eventTimestamp is a field defined on every CAT event. <br> Used to assign the CAT Trading Day. |
| Event Date | The date portion of the Event Timestamp. | Part of all Route Linkage Keys, the TRF Linkage Key, and the MOOT Linkage Key. <br> Used to link records within the Event Date. |
| File Generation Date | The date the file was generated or reported. <br> File Naming convention requires that the TRADE DATE (as defined below) be used in the File Name. | Used to guarantee uniqueness for a file across dates. |
| CAT Trading Day | Trading Day for Plan Participants is defined as beginning at midnight immediately following a Trade Date and ending immediately prior to midnight on the next Trade Date. <br> Weekends and holidays are not considered a Trading Day. <br> Refer to Section 9.7 and the table below for more information, including examples demonstrating the calculation of CAT Trading Day, Submissions Due Date and Corrections Due Date. | Used to calculate the submission due date and corrections due date. <br> For an event occurring on CAT Trading Day T: <br> Submissions Due By: CAT Trading Day + 1 @ 8:00 a.m. ET <br> Corrections Due By: CAT Trading Day + 3 @ 8:00 a.m. ET |
| Trade Date | Trade Date for Plan Participants is defined as beginning at midnight immediately following a Trade Date and ending immediately prior to midnight on the next Trade Date. <br> Weekends and holidays are not considered a Trade Date. An event occurring on a weekend or holiday will be assigned to the next Trade Date. | Used to calculate the due date of data delivered to Regulatory Users. <br> Due Date for Data and Associated Lifecycle Assignment delivery to Regulatory Users: Trade Date + 5 8:00 a.m. ET <br> Used to calculate summaries and present feedback on the CAT Reporter Portal representing events for the same Trade Date, regardless of when the events were reported. |
| CAT Processing Date | Date representing the set of events reported for a CAT Trading Day. Events reported late to CAT will be assigned the CAT Processing Date reflective of when they were reported. For example, an event, that occurred at 2:00 p.m. ET on T which is reported to CAT after T+1 8 a.m. ET and prior to T+2 @ 8:00 a.m. ET will be assigned CAT Processing Date of T+1. | Used to identify late submissions and late repairs. <br> Used to calculate summaries and present feedback on the CAT Reporter Portal representing events reported on the CAT Processing Date, regardless of the Event Date. |

## Appendix E. Placeholder

The previous content of Appendix E has been removed because it is not applicable to the FINRA CAT Plan Participant Technical Specifications. The heading is being retained to maintain the structure of the Appendix. This section may be repurposed in the future.

## Appendix F. Data Dictionary

Each field presented in this technical specification is defined below in terms data type, related message types, description, and allowed values.

Table 95: Data Dictionary

## A $\underline{B} \underline{C} \underline{D} \underline{E} \underline{F} G \underline{H} \underline{I}$ J $\underline{K} \underline{M} \underline{N} \underline{O} \underline{P} \underline{Q} \underline{R} \underline{S} I \underline{U} \underline{V} \underline{W} X Y Z$

 exchOriginCode executionCodes handlingInstructions orderAttributes orderType Participant ID saleCondition timelnForce type| Field Name | Data Type | Description |
| :---: | :---: | :---: |
| acceptTime | Time | Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF) Time the trade was accepted by the contra party. |
| acceptTimestamp | Timestamp | Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF) <br> Date and time the trade was accepted by the contra party. |
| actionType | Choice | Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF) <br> Indicates if this is a new event, a FINRA-initiated correction, or a firm-initiated correction. |
| askPrice | Price | Event(s): Equity Best Bid and Offer Event (EBBO), Quote (OQ) The price being asked for the option in a quote. |
| askQuoteID | Text (40) | Event(s): Option Quote (OQ), Option Quote Cancel (OQC) Contains the quote ID for the ask for two-sided quote reporting. |
| askQty | Unsigned | Event(s): Equity Best Bid and Offer Event (EBBO), Quote (OQ) The quantity being asked for the option in a quote. |
| asOfFlag | Choice | Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF) Indicates as-of trade. |
| assumedExecutionTim estamp | Timestamp | Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF) <br> Date and time the trade is assumed to have been executed based on available information. |
| Ats | Boolean | Reference Data: Member Alias Detail Entry (MADE) Indicates that the memberAlias is an ATS. |
| awayExchange | Exchange ID | Event(s): Self-Help Declaration (SHD) <br> Exchange ID of the exchange affected by the self-help event. |

| Field Name | Data Type | Description |
| :---: | :---: | :---: |
| bidPrice | Price | Event(s): Equity Best Bid and Offer Event (EBBO), Option Quote (OQ) <br> The price being bid for the option (can be zero in two-sided quote) in a quote event. |
| bidQty | Unsigned | Event(s): Equity Best Bid and Offer Event (EBBO), Option Quote (OQ) <br> The quantity being bid for the option (can be zero in two-sided quote) in a quote event. |
| buyDetails | Side Trade Details | Event(s): Order Trade Event, Trade Correction Event, Option Trade Event, Options Trade Correction Event <br> Object in a trade event that contains information for the buy side of the trade. Format and element definitions for Buy Details are described in Trade Side Details. For side trade details for equities, please refer to section 4.5. For side trade details for options, please refer to section 5.2.5.1. |
| cancellationTimestamp | Timestamp | Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF) Date and time the reporting party cancelled the trade. |
| cancelQty | Unsigned | Event(s): Order Canceled Event, Options Order Canceled Event <br> The quantity being canceled in Order Cancel Event and Options Order Canceled Event. A value of zero means that the cancel was for the full remaining quantity. For example, if an order for 500 shares had partially executed 200 shares, and then the remainder was canceled, the cancelQty could contain either 300 or 0 . |
| cancelReason | Choice | Event(s): Order Canceled Event, Quote Cancel Event, Options Order Canceled Event <br> Expresses the cancellation reason for a quote or order with one of the below accepted values. Additional values may be added by request. <br> Allowed Values <br> IOC Immediately canceled <br> EXP Expired <br> REQ Explicit request to cancel the order <br> DIS Session disconnected <br> ALL Market Maker Canceled All Quotes <br> Allowed Values: Cboe Legacy (C1) Only <br> active 3/29/2019-10/4/2019 <br> NOTHING_DONE <br> USER <br> SYSTEM <br> LOST_CONNECTION <br> INSUFFICIENT_QUANTITY <br> SPECIAL_ADJUSTMENT <br> QRM_REMOVED <br> INSUFFICIENT_QUANTITY_BUY_SIDE <br> INSUFFICIENT_QUANTITY_SELL_SIDE <br> WASH_TRADE_PREVENTION <br> QUOTE_UPDATE_CONTROL <br> FAILOVER <br> QUOTE_IN_TRIGGER <br> INVALID_SESSION_ID <br> SAL_IN_PROGRESS <br> CROSS_IN_PROGRESS |

|  |  | Allowed Values: MEMXOP |  |
|  |  |  | Other - This order was canceled for some other reason not listed. |
|  |  |  | UserRequestedCancel - The client sent a OrderCancelRequest or OrderMassCancelRequest for this order. |
|  |  |  | ExecutionPriceCollar - The price of the order fell outside execution price collar bands. |
|  |  | 6 | Halted - The market on the order's security was halted. |
|  |  |  | ExchangeSupervisory - Operational or supervisory actions taken by MEMXOP resulted in the cancellation of this order. |
|  |  | 8 | OrderExpired - The order was sent with an expiration time and had the "good for time" time in force set, and the supplied expiration time passed. |
|  |  | 10 | MatchTradePrevention - This or another associated order's specified self trade prevention behavior triggered the cancellation of this order. |
|  |  | 13 | ParticipantDisconnect - The participant directed that their orders should be canceled when the trading system detects a disconnection, and the participant disconnected. |
|  |  |  | OrderNotBookable - The Order is not of bookable type (this may include market orders, IOC, FOK, etc). |
|  |  | 17 | FirmDisabled - The order was cancelled because the firm was disabled. |
|  |  |  | EFIDDisabled - The order was cancelled because the EFID was disabled. |
|  |  |  | AccountDisabled - The order was cancelled because the Account was disabled. |
|  |  | Allowed Values: Nasdaq Equities - NSDQ, PSX, BX |  |
|  |  | 1 | User requested cancel. Sent in response to a Cancel Order Message or a Replace Order Message |

This field will contain zero or more order instruction codes, each separated by a single pipe symbol (ASCII decimal 124, hex 7C). Codes which require a value will include that value immediately after the code Field Name and a single equal sign (ASCII decimal 61, hex 3D). <br> All instructions that apply to the order are to be included. <br> Allowed Values: Boolean <br> presence indicates truth <br> Note: Some exchanges have special values to indicate handling of ISO orders. All ISO orders must be marked with the boolean ISO value. Thus, if an exchange denotes an ISO order with some custom attribute, it must also be marked with the |

| Field Name | Data Type | Description |  |
| :---: | :---: | :---: | :---: |
| handlingInstructions (continued) |  | common ISO value. |  |
|  |  | Allowed Values: Name Value Pairs |  |
|  |  | MIN | Minimum Quantity - requires an Integer value, representing he minimum quantity allowed to be executed in a single transaction (e.g., MIN=1000). |
|  |  | WD | With Discretion Price - requires a Numeric value, representing the discretion price (e.g, WD=12.50) |
|  |  | STP | Stop Price - requires a Numeric value representing the stop price (e.g., STP=17.95) |
|  |  | XDATE | Expire Date - requires a Date value, representing the date that the order expires. The value must be in Date format (e.g., May 15, 2017 would be XDATE=20170515). The order expires at the close of the specified date. |
|  |  | XTIME | Expire Time - requires a Time value, representing the time that the order expires. The value must in a valid Timestamp format. |
|  |  | R2E | Route to Exchange - requires Exchange ID (e.g., R2E=G). The desired route destination is not the party receiving the actual route. The party receiving the route does not have discretion as to where to route the order. It must be routed to a specific exchange. |
|  |  | R2M | Route to Industry Member - requires Member Alias (e.g., R2E $=A B C 123$ ). The desired route destination is not the party receiving the actual route. The party receiving the route does not have discretion as to where to route the order. It must be routed to a specific industry member. |
|  |  | R20 | Route to Other - requires $\operatorname{Text}(20)$ (e.g., R2O=Somebody). The desired route destination is not the party receiving the actual route. The party receiving the route does not have discretion as to where to route the order. It must be routed to an entity who is neither an exchange nor an industry member (i.e., the entity does not have a CAT reporting responsibility). |
|  |  | Allowed Values: Cboe Legacy (C1) active 3/29/2019 - 10/4/2019 |  |
|  |  | MIT | Market if touched, becomes a market order if the price is touched. Requires a price value (e.g, MIT=20.53). |
|  |  | AucResp | A response to an auction, the remainder is canceled at the end of the auction. Requires a integer value representing the auction ID being responded to. (e.g., AucResp=1234). |
|  |  | Reserve | Reserve, only a portion of the order is displayed. Requires an integer value representing quantity. (e.g., Reserve=300). |
|  |  | PMM | Preferred market maker, requires a text (text, 10) value representing the acronym of the preferred market maker. (e.g., PMM=FRMA) |
|  |  | AIM | Automated Improvement Mechanism. Requires a choice value (e.g., AIM=AIM) selected from the following list |
|  |  |  | AIM standard AIM |
|  |  |  | AIQ QCC Primary Order |
|  |  |  | AIS Sweep and AIM primary order |
|  |  |  | AIR Re-route if cannot AIM primary order |
|  |  | ARE | Contra order to AIM. Requires a text (text 20) value representing the primary order ID. (e.g., ARE=AB54321) |

| noWasLinkNumber | Text (30) | Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF) Link to first No transaction |
| oeMemoTx | Text (10) | Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF) Memo text entered by firm. |
| onlyOneQuote | Boolean | Event(s): Quote Event (OQ), Quote Cancel Event <br> True if the system allows only one quote for the particular market maker; false otherwise. |
| openCloseIndicator | Choice | Event(s): Simple Option Order Accepted, Options Modified, Post Trade Allocation, Options Restatement or sideDetail of Option Trade events. (When this field is present in the sideDetails of an options trade event, it is applicable only when the side of the trade is an order) <br> Indicates the position of the order. <br> Allowed Values: <br> Open <br> Close <br> Unspecified |
| optionID | Text (40) | Reference Data: Option Series Dictionary Entry (OSDE), Complex Option Dictionary Entry (CODE) <br> Event(s): All events for Options Exchanges, Note (NOTE), Supplemental Trade Event (STE), Reject Message Event (RME) <br> The unique ID assigned to this option by the reporter. None of any two simple/complex/flex options should receive the same ID. |
| optionsSymbol | Text (14) | Reference Data: Option Series Dictionary Entry (OSDE) <br> The option class or symbol for the series (as known by OCC). |
| orderAttributes | Name/Value Pairs | Event(s): Order Accepted, Order Modified, Order Restatement, Simple Option Order Accepted, Complex Option Order Accepted, Complex Option Order Modified, Stock Leg Order, Option Order Modified, Complex Order Modified, Stock Leg Modified, Option Order Restatement <br> The order attributes field is a way to provide attributes of an order that are not |

| Field Name | Data Type | Description |  |
| :---: | :---: | :---: | :---: |
| orderAttributes (continued) |  | necessarily the same as handling instructions. |  |
|  |  | For example, the rank price of an order, or the participant with the best bid. |  |
|  |  | Allowed Values |  |
|  |  | childOrderID R | Requires value, e.g. childOrderID $=123456789$ |
|  |  | FBT | Floor Broker Trade; Boolean value where presence indicates that the event is the result of a Floor Broker Trade. This can be used by an exchange to report an OOA event when a floor trade is executed. Firms are not currently required to report the corresponding event. The result is linkage errors that cannot be repaired. The presence of this flag will exclude the event from linkage feedback and error rate calculation until such time as the corresponding events are required to be submitted by the firm. |
|  |  | NBBPAR Pa | Participant at the best bid - requires a Participant ID, representing the participant at the best bid (e.g, NBBPAR=Par1) |
|  |  | NBOPAR P | Participant at the best offer - requires a Participant ID, representing the participant at the best bid (e.g, NBOPAR=Par1) |
|  |  | pairedOrderld $\begin{array}{cc}\text { R } \\ & \text { res } \\ & \text { (A } \\ & \text { w } \\ & \mathrm{a} \\ & \mathrm{m} \\ & \mathrm{E}\end{array}$ | Requires Text(40). In addition to the standard Text data type restrictions, Participants should avoid using the "at symbol," @ (ASCII decimal 64, hex 40). Participant-provided value that that will be present on the OOA, OCOA, OOM and OCOM events that are part of a customer-submitted cross order. The pairedOrderld must uniquely identify the paired orders within the Trade Date and Exchange. |
|  |  | PCTPX | Indicates that the limit price provided in the price field of the order is specified as a percentage of a benchmark price. For example, price $=94.5$ indicates that the final dollar price of the trade should be $94.5 \%$ of a benchmark price. replacedOrderDate Used when a new order is entered to replace a previously entered erroneous order. Reference to a date of a previously reported order that has a matching orderID. Requires a Date value, e.g. replacedOrderDate $=20210930$ |
|  |  | replacedOrderID | Used when a new order is entered to replace a previously entered erroneous order. Reference to a previously reported order that has a matching orderID. Requires a $\operatorname{Text}(40)$ value, e.g. replacedOrderID = 123456789ABC |
|  |  | RNKP $\quad$ R | Rank Price - requires a Price value, representing the price used to rank the order in the book (e.g., RNKP=10.25). |
|  |  | Allowed Values: active 3/29/2019 | Cboe Legacy (C1) Only - 10/4/2019 |
|  |  | MPID | Market participant ID, requires an alphanumeric(8) value. (e.g., MPID=A12345) |
|  |  | MeetExchangeID | Meet Exchange ID, requires a text(8) value. (e.g., MeetExchangeID=B76543) |
|  |  | Branch | Branch ID, requires a alphanumeric(8) value. (e.g., Branch=ABCD5) |
|  |  | BranchSeqNbr | The branch sequence number, requires an integer(10) value. (e.g., BranchSeqNbr=500321) |
|  |  | CorrespFirm | The corresponding firm, requires an alphanumeric(8) value. (e.g., CorrespFirm=987765B) |
|  |  | UserID | The user ID. Requires a text(8) value. (e.g., UserID=4321A) |
|  |  | Extensions | Order Extensions. Requires a text(256) value. |

## Appendix G.CATFT (fileX) Token Service Instructions and Examples

## Pre-requisite requirement

The CATFT service requires established direct connectivity to CAT as the service is only accessible via direct connectivity.

## Endpoints

CATFT S3 Token service should be accessed using OAUTH tokens. The OAUTH token can be obtained by making an API request to CATFIP (CAT Enterprise Authentication Service) using the endpoints defined below.

The CATFIP API POST request should be made using Basic Auth method (username and password provided by FINRA CAT) but all subsequent requests to CATFT S3 Token service APIs should be made using the obtained OAUTH token passed as a header (see CATFT API section for details). The OAUTH token is valid for up to 12 hours.

CATFIP endpoints for retrieval of OAUTH Tokens are as follows:

| Environment | Endpoint |
| :--- | :--- |
| UAT (CT) | https://ews-ct.fip.catnms.com/fip/rest/ews/oauth2/access_token |
| Production | https://ews.fip.catnms.com/fip/rest/ews/oauth2/access_token |
| Disaster Recovery <br> (CT/Prod Mirror) | https://ews-ct.fip.dr.catnms.com/fip/rest/ews/oauth2/access_token |

| Header | Required (Y/N) | Default | Example |
| :--- | :--- | :--- | :--- |
| Authorization | Y | N/A | Authorization: Basic base64-encoded(username: password) |
| Accept | N | application/json | application/json |

## Sample CATFIP API call:

```
curl --location --request POST 'https://ews-
ct.fip.catnms.com/fip/rest/ews/oauth2/access_token?grant_type=client_credentials' --header
'Authorization: Basic XXXXXXXX'
Sample response from CATFIP API:
OAUTH Token is the value of "access_token" key in the JSON response.
{
```

```
xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx",
"expires_in" : "43170",
"scope" : "any",
```

"token_type" : "Bearer"
}

```

CATFT endpoints for retrieval of S3 tokens are as follows:
\begin{tabular}{|l|l|}
\hline \begin{tabular}{l} 
Environment / \\
Product Type
\end{tabular} & Endpoint \\
\hline \multicolumn{2}{|c|}{ UAT (CT) } \\
\hline \multicolumn{1}{|c|}{ Equities } & https://filetransfer.ct.catnms.com/S3TransferTokens/\{XXXXX\}/cat-equities \\
\hline \multicolumn{2}{|c|}{ Options } \\
\hline Production & https://filetransfer.ct.catnms.com/S3TransferTokens/\{XXXXX\}/cat-options \\
\hline \multicolumn{2}{|c|}{ Equities } \\
\hline \multicolumn{2}{|c|}{ Options } \\
\hline \multicolumn{2}{|l|}{ Disaster Recovery (CT/Pps://filetransfer.catnms.com/S3TransferTokens/\{XXXXX\}/cat-equities } \\
\hline \multicolumn{2}{|c|}{ Equities } \\
\hline \multicolumn{2}{|l|}{ Options } \\
\hline
\end{tabular}
\(\{X X X X X\}\) is the id associated with the EWS account.

\section*{S3 Buckets}

The S3 buckets and paths for submitting and retrieving data are as follows:
\begin{tabular}{|c|c|c|}
\hline Environment / Product Type & Submission & Feedback \\
\hline \multicolumn{3}{|l|}{UAT (CT)} \\
\hline S3 Buckets & 3275-9867-7452-eft & 3275-9867-7452-eft-feedback \\
\hline Equities Paths & 3275-9867-7452-eft/\{XXXXX\}/catequities/in & \begin{tabular}{l}
3275-9867-7452-eft- \\
feedback/\{XXXXX\}/cat-equities/out
\end{tabular} \\
\hline Options Paths & 3275-9867-7452-eft/\{XXXXX\}/catoptions/in & \begin{tabular}{l}

\hline \multicolumn{3}{|l|}{Disaster Recovery (CT/Prod Mirror)} \\
\hline S3 Buckets & 3275-9867-7452-eft-pm-us-east-2 & 3275-9867-7452-eft-feedback-pm-us-east-2 \\
\hline Equities Paths & \begin{tabular}{l}
3275-9867-7452-eft-pm-us-east- \\
2/\{XXXXX\}/cat-equities/in
\end{tabular} & 3275-9867-7452-eft-feedback-pm-us-east-2/\{XXXXX\}/cat-equities/out \\
\hline
\end{tabular}
\begin{tabular}{|c|l|l|}
\hline Options Paths & \begin{tabular}{l}
\(3275-9867-7452-\) eft-pm-us-east- \\
\(2 /\{X X X X X\} /\) cat-options/in
\end{tabular} & \begin{tabular}{l}
\(3275-9867-7452\)-eft-feedback-pm-us- \\
east-2k/\{XXXXX\}/cat-options/out
\end{tabular} \\
\hline
\end{tabular}
\(\{X X X X\}\) is the id associated with the EWS account.

If the reporter name is provided in the file name, the feedback will be made available in either the equties path or options path, as appropriate for the named reporter.

If the reporter name is not provided in the file name and only one feedback path exists (either equities or options, but not both), the feedback will be available in that path.

If the reporter name is not provided in the file name and both equities and options paths exist, the feedback will be available in the options path at cat-options/out/YYYYMMDD/otherErrors.

\section*{CATFT API}

The below details out the HTTP GET method to retrieve tokens against the CATFT (file transfer) service. The following header parameters should be passed when making the REST API call:
\begin{tabular}{|l|l|l|l|}
\hline Header & Required (Y/N) & Default & Example \\
\hline Authorization & Y & \(\mathrm{N} / \mathrm{A}\) & Authorization: Basic base64-encoded(username: password) \\
\hline Accept & N & application/json & application/json, application/xml \\
\hline
\end{tabular}
* Org_id and the username - password to use the token service will be issued by FINRA CAT.

\section*{Sample response from the CATFT token service for an options SRO:}
```

{
"region": "us-east-1",
"sessionName": "<session-name-detail>",
"readPaths": [
"4145-5486-2873-eft-feedback/<OrgID>/cat-options/out"
],
"writePaths": [
"4145-5486-2873-eft/<OrgID>/cat-options/in"
],
"credentials": {
"accessKeyId": "ABCDXXXXXXXXXXXXXXXXX",
"secretAccesskey": "XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX",
"sessionToken":
"XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX+==",
"expiration": "2019-06-10T17:42:59.000-04:00"
}
}

```
i. Set the received token as environment/session settings in the application (LINUX example below)
```

export AWS_ACCESS_KEY_ID=ABCDXXXXXXXXXXXXXXXXX
export AWS_SECRET_ACCESS_KEY=XXXXXXXXXXXXXXXXXXXXXXXXXXX
export AWS_SESSION_TOKEN=
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXX }+=

```

Sample response from the CATFT token service for an equities SRO:
```

{

```
    "region": "us-east-1",
    "sessionName": "<session-name-detail>",
    "readPaths": [
        "4145-5486-2873-eft-feedback/<OrgID>/cat-equities/out"
    ] ,
    "writePaths": [
        "4145-5486-2873-eft/<OrgID>/cat-equities/in"
    ],
    "credentials": \{
        "accessKeyId": "ABCDXXXXXXXXXXXXXXXXX",
        "secretAccesskey": "XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX",
        "sessionToken":
" XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX+==",
            "expiration": "2019-06-10T17:42:59.000-04:00"
    \}
\}
ii. Set the received token as environment/session settings in the application (LINUX example below)
```

export AWS ACCESS KEY ID=ABCDXXXXXXXXXXXXXXXXX
export AWS_SECRET_ACCESS_KEY=XXXXXXXXXXXXXXXXXXXXXXXXXXX
export AWS_SESSION_TOKEN=
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXX }=

```

Note: The session token is valid for 3 hours, so perform the file transfer steps before token expires. Request and use a new token for subsequent file transfers.

\section*{Appendix H. Plan Processor Best Practices}

This section contains a bulleted list of best practices for Plan Participants.
- Use a retry loop with a minimum of three attempts when submitting to or pulling from a FINRA CAT S3 location.
- Re-use valid and non-expired AWS S3 STS tokens whenever possible instead of using a new STS token per file.
- The AWS S3 STS token is temporary and will expire within an in 3 hours. For larger file uploads, refresh the token in 2 hours and 45 minutes to ensure there are no gaps

\section*{Appendix I. Historical Summary of Document Revisions}
\begin{tabular}{|c|c|c|c|}
\hline Version & Date & Author & Description \\
\hline 1.0 & 5/14/2017 & Thesys CAT & Initial release. \\
\hline 1.1 & 6/2/2017 & Thesys CAT & \begin{tabular}{l}
Incorporates feedback from version 1.0. \\
- Various minor changes to correct typos, and make clarifications. \\
- Sale Condition - Added the Supplemental Trade Event to provide a way for sale condition to be reported independently of the trade/fill event itself. In addition, the saleCondition in all the trade/fill events was marked as conditional. \\
- Changed "style" to "exerciseStyle" for clarity \\
- Changed timestamp format from UTC to Eastern (kept alternative timestamp format). \\
- sequenceNumber changed from Required to Conditional \\
- result and resultTimestamp changed from Required to Optional \\
- Removed price from trade break event. Clarified definition of quantity in trade break event to allow for partial trade break. \\
- Made buy/sell details on a trade correction optional - for simpler cases where only the price/qty are changed \\
- Added executionTimestamp and reason as optional fields to trade correction events. \\
- Fixed some Message Type typos and mismatches between tables. \\
- Fixed inconsistent use of cancelReason and cancelReasonCode so all uses reference cancelReason. \\
- Changed clearingFirm in stock leg from a validated MemberAlias to a free form \(\operatorname{Text}(10)\) - as explained by SRO this field is received in the order from the BD and is passed thru to the firm executing the stock leg - there is no validation of this field. Also, changed to be optional. \\
- exchOriginCode removed from complex option stock leg events \\
- timelnForce, handlingInstructions, and orderAttributes added as conditional fields for complex option order modify event \\
- liquidityCode is optional for option trades because some option exchanges do not track and report add/remove of liquidity. \\
- Stock Leg Fill Event - renamed tradeID to fillID; removed quoteID; changed orderID to required; clearingFirm changes as mentioned above; clearingNumber is now optional \\
- Post Trade Allocation - added optional fields as requested: openCloseIndicator, exchOriginCode, mktMkrSubAccount, reason \\
- Upload directory will be the date for the events being reported \\
- leavesQty in side details is not required when used in conjunction with a trade correction \\
- cmtaFirm and mktMkrSubAccount are now conditional rather than optional \\
- Modified Events - optional fields changed from optional to conditional since they are required if their value changes, and is more consistent with the definition of conditional than optional.
\end{tabular} \\
\hline
\end{tabular}
\begin{tabular}{|c|c|c|c|}
\hline Version & Date & Author & Description \\
\hline & & & - Substantial updates to data dictionary, including additions to orderType, executionCodes, handlingInstructions, and orderAttributes based on SRO feedback. \\
\hline 1.2 & 6/20/2017 & Thesys CAT & \begin{tabular}{l}
- Minor changes to correct typos and add clarification \\
- Data Dictionary - reformat; address typos and inconsistencies \\
- Add ETF to issueType; add issueType to examples \\
- Update JSON/CSV schema \\
- Clarified orderID for option cancel and stock leg fill \\
- Supplemental Trade Event - side is conditional on fillID \\
- Clarifications in feedback section \\
- Updated tables for FINRA reporting formats: sections 6.3, C.4, and D
\end{tabular} \\
\hline 1.3 & 7/6/2017 & Thesys CAT & \begin{tabular}{l}
- aliases were overloaded - separated into memberAliases and symbolAliases \\
- Clarify Inactive status for member dictionary \\
- Add Asian and Cliquet to option settlement \\
- Add definition of receipt time \\
- Add symbol and optionID to the Note Event \\
- Option trades may not have quoteID/orderID on one or both sides of a trade \\
- Provide JSON field names for metadata file \\
- Call out single-line restrictions on JSON/CSV files \\
- Clarification and examples for JSON/CSV schema and conversions \\
- Describe the Symbol Master upload file \\
- Updated details and diagrams for connectivity changes \\
- Clarify definition of Record Index for feedback and correction files \\
- Add CBOE Note Event details \\
- Clarify support for FLEX PCT trades \\
- Defined values for ParticipantID/ExchangeID
\end{tabular} \\
\hline 1.5 & 12/07/2017 & Thesys CAT & \begin{tabular}{l}
- Optionally allow space as separator in Timestamp \\
- XTIME requires Timestamp \\
- Add "type" field to Metadata \\
- Update data dictionary with SRO-assigned values \\
- Define Symbol Alias data type \\
- Increase length of companyName field \\
- Add symbol market move scenarios \\
- Corrections and clarifications to text and examples \\
- add executionCodes to option side-trade details \\
- Update descriptions for FINRA reported OTCBB and TRF \\
- Add FINRA halt/resume \\
- Clarified encoding for file submissions \\
- Placed length limit of filename group \\
- Increase length of fileID and origFileID for metadata
\end{tabular} \\
\hline
\end{tabular}
\begin{tabular}{|c|c|c|c|}
\hline Version & Date & Author & Description \\
\hline & & & \begin{tabular}{l}
- Add information about upcoming change in encryption process \\
- Clarified format for hashes in metadata \\
- Removed support for VPN access \\
- Clarified SFTP upload procedures \\
- Add "final" stage for file processing \\
- Provide fileName instead of fileID for certain integrity failures \\
- Clarification for cancelQty \\
- Added cancelReason values for BOX, MIAX, Pearl, and CHX \\
- Added definedNoteData values for NYSE \\
- Added exchOriginCode values for NYSE, Bats, MIAX, and Pearl \\
- Added executionCodes values for BOX, MIAX, CHX, and NYSE \\
- Added general handlingInstructions, and specific ones for BOX, CHX, and NYSE, \\
- Added liquidityCode values to support extended codes for NYSE \\
- Added noteType values for NYSE \\
- Added/Updated orderAttributes values for BATS, BOX, CHX, and NYSE \\
- Added general orderType values AMPEG, LOO, MOO, MDPEG, MMPEG, RTPEG, SOL and specific values of CHX and NYSE \\
- Changed Participant ID values for NYSE National and NYSE American \\
- Added CrossExempt to side values \\
- Added general timelnForce values AOK, CLO, GTX, OPG, REG, WCO and specific values for CHX \\
- Clarified the delivery timeline for the file submission functionalities via Reporter Portal \\
- Update FINRA OTCBB/TRF field definitions \\
- Restrict correction records to the original fileID \\
- Provide full equity master file to participants \\
- Define encoding as ISO-8859-1 \\
- Clarify underlyingType mappings \\
- PTA event: add quoteID; clarify quoteID/orderID fields \\
- Support complex orders in option restatement \\
- Clarify executingBroker definition \\
- Redefine the GROUP filename component \\
- Indicate when finished sending a batch of files \\
- Add complexOptionID to leg events \\
- quoteID globally unique by reporter/date/optionID/quoteID \\
- New upload/encryption process \\
- Clarify initiator field definition \\
- Modified events now require full state of order \\
- Modify and clarify file submission process \\
- Update Participant ID definitions
\end{tabular} \\
\hline 1.6 & 2/16/2018 & Thesys CAT & \begin{tabular}{l}
- Add lifecycle keys for each event \\
- New events: Order Adjusted, Option Order Adjusted, Complex Order Adjusted, Stock Leg Adjusted
\end{tabular} \\
\hline
\end{tabular}
\begin{tabular}{|c|c|c|c|}
\hline Version & Date & Author & Description \\
\hline & & & \begin{tabular}{l}
- Unified and clarified definitions for originalOrderID in modified, adjusted, and restatement events \\
- Remove confusing text about a missing or empty value for the session field being used as a default value. \\
- Updated corporate action reporting formats specified in Appendix C. \\
- File ID no longer required in .meta file, and origFileNumber replaces origFileld for file replacement and corrections. \\
- Reverting to the original specification, regarding the .final file. Based on SRO feedback, in version 1.7 of the input spec changes will be made to simplify the automation of file submission from the SRO perspective. \\
- Clarify NBBO values when the NBBO may be unavailable \\
- Ease restriction on routingFirm so it can be any text string, not just a Member Alias. \\
- Clarify what is submitted for both JSON and CSV formats when a data field is not reported. \\
- Correct events which were missing fields displayPrice, displayQty, and leavesQty. \\
- Added type as first column in FINRA OTC corporate actions, TRF, OTCBB, and Halt/Resume records. \\
- Changed type from Numeric to Unsigned in FINRA TRF and OTCBB events. \\
- Increased max length for some text fields in daily events to make them consistent. \\
- Time is a JSON Number
\end{tabular} \\
\hline 1.6.1 & & Thesys CAT & \begin{tabular}{l}
- Change max length of Symbol to 20. \\
- Fix typo in NYSE Corporate Actions event. \\
- Remove symbology and normalization feedback stages these are contained in the ingestion feedback. \\
- Added CBOE executionCode FirmTradeTime. \\
- Add isGloballyUnique to complex accepted event, and relax requirement on complexOptionID if the orderID is globally unique. \\
- Add the file kinds NASDDaily, BATSDaily, NYSEDaily, and FINRADaily to the file submission process. These file kinds subsume Halt/Resume and Corporate Actions. \\
- Add clarification of semantics of a successful file replacement.
\end{tabular} \\
\hline 1.7 & 07/24/2018 & Thesys CAT & \begin{tabular}{l}
- Updates to per-SRO member dictionary values \\
- Added member field to explicitly identify the member on orders and trades. \\
- Clarified requirement for marking ISO orders in handlingInstruction \\
- Added sequence number subsystem \\
- Change routingFirm to routingParty for clarity of intent \\
- Add Internal Route events \\
- Add Bulk Print Event \\
- Clarify field requirements
\end{tabular} \\
\hline
\end{tabular}
\begin{tabular}{|c|c|c|c|}
\hline Version & Date & Author & Description \\
\hline & & & \begin{tabular}{l}
- Make fields conditional regarding complex options and option legs \\
- Remove NASD TRF \\
- Added file submission schedule \\
- Add refTradeID to trade correction events \\
- Add display Qty/Price to quote events \\
- Remove executingBroker \\
- Add floorBroker \\
- beginDate is optional in the expected field for symbol master updates \\
- Update type info for amount and amountCode in NASD daily records
\end{tabular} \\
\hline 1.7.1 & 09/09/2018 & Thesys CAT & \begin{tabular}{l}
- Update symbol master management \\
- ASE is to be used only for adding a new symbol \\
- USE is to be used for only updating fields (no longer can be used for transfer) \\
- SMRST is for restating and/or verifying an existing symbol \\
- SMXFR is for transferring a symbol to a new listing participant \\
- Update appendix E (symbol master transfer topics)
\end{tabular} \\
\hline 1.7.2 & 3/6/2019 & CAT NMS, LLC & \begin{tabular}{l}
- Update encryption requirements \\
- Change connectivity requirements from SFTP to S3 Upload \\
- Add Disaster Recovery information \\
- Add MIAX Emerald options exchange specifications \\
- Add appendix \(G\) with sample transmission of Participant files to S3 buckets
\end{tabular} \\
\hline 2.0.0 & 5/10/2019 & FINRA CAT & \begin{tabular}{l}
- General Format Modifications \\
- Table numbers added \\
- Font changes \\
- Data dictionary changed from list to table format \\
- Typographical errors corrected \\
- Revised grammar as necessary \\
- File compression has been limited to BZIP2 (.bz2) \\
- Equities Submissions specifications have been greyed out. \\
- PP SLA Requirements have been updated with new options files submission times \\
- Data flow Architecture diagram updated to show the ability of PP's to pull feedback files from the Plan Processor AWS S3 location \\
- Connectivity section updated to show new architecture of mandated S3 Direct Links (required by Nov.) \\
- Physical locations of the feedback subdirectories identified for each Plan Reporter ID \\
- Added AWS S3 Direct Download Process \\
- Disaster Recovery Information updated. \\
- Feedback and corrections flow chart for visualization of the process has been added.
\end{tabular} \\
\hline
\end{tabular}
\begin{tabular}{|c|c|c|c|}
\hline Version & Date & Author & Description \\
\hline & & & \begin{tabular}{l}
- Physical locations of the feedback subdirectories identified for each CAT Reporter \\
- FieldName and FieldValue have been added to the feedback JSON format. \\
- Error Codes for the correction feedback loop added in Appendix B \\
- Data Dictionary Updates \\
- Added Plan Participant best practices appendix
\end{tabular} \\
\hline \multirow[t]{19}{*}{\begin{tabular}{l}
2.0.0 \\
Enhanced
\end{tabular}} & \multirow[t]{19}{*}{6/7/2019} & \multirow[t]{19}{*}{FINRA CAT} & \multirow[t]{19}{*}{\begin{tabular}{l}
- Corrected data type for name/value pair to add JSON object to match verbiage of name/value description in section 1.4.1 \\
- Marked equity event sections 4.1 (EOA event), 4.2 (EOR event) and 4.8 (EOF event) with a black font since they are applicable for the June release \\
- Section 5.2.2.3 definition for OSLM (option stock leg modified) event was changed to swap place the seqNumber attribute ahead of the seqNumSub attribute \\
- Enhanced OT record samples to include Side Trade Details in Section 8.3.1 \\
- Enhanced OT record samples to include Side Trade Details in Section 8.4.1 \\
- In section 9.1.2 the compressedHash field description was changed to be consistent with the Include Key column which mandates that this field is populated. \\
- Section 10.1 now articulates that all feedback files will be compressed using bz2 \\
- Modify section 10 JSON feedback examples to be in sync with document verbiage and added more descriptive language for feedback files. \\
- Modify document in section 10 to eliminate statements indicating that the entire file will be rejected if it contains an invalid message type \\
- Sections 6, 10.9.1 and 10.10 have been marked with a grey font since they are not applicable to the June release \\
- Added new error codes in Appendix B \\
- Appendix F - Data Dictionary \\
- Add new value 'd' for orderAttributes name 'REJA' for Cboe non legacy options exchanges \\
- Change data type for cancelReason to Choice from text(255) \\
- Change data type of the orderAttributes value for name NBBOProtection to Boolean from choice for Cboe (C1 Legacy) \\
- Add new values for definedNoteData field for name AuctionType for Cboe (C1 Legacy) \\
- Add new values for oderAttributes names AckSubLiquidity and RESTA for Cboe non legacy options exchanges \\
- Add new value for handlingInstructions name TifMod for Cboe non legacy options exchanges \\
- Divide ExecutionCode Attribute name/values between Cboe non legacy options exchanges and Cboe (C1 Legacy)
\end{tabular}} \\

\begin{tabular}{|c|c|c|c|}
\hline Version & Date & Author & Description \\
\hline & & & - Added valid temporary name value pairs for executionCodes, handlingInstructions, and orderAttributes to support back processing data received from 3/29/2019-6/21/2019 \\
\hline 2.1.0 & 9/24/2019 & FINRA CAT & \begin{tabular}{l}
- \(\quad\) Section 4.2: Remove duplicative rows from Table 20, which describes the Equity Order Route event type \\
- Removed section 9.3 with obsolete diagram of token exchange \\
- Section 9.5: Update connectivity section to show private line connection details \\
- Section 10.11.1 Feedback and Correction: Enhanced the description to state a reference data error can only be corrected by resubmitting the entire file after correcting the error \\
- Section 10.11.1 Feedback and Correction: Enhance the correction processing section to state that the record offset in the feedback file for correction processing will reference the original file and not the correction file. \\
- Appendix F: Data Dictionary modifications \\
- Appendix G: Update for utilizing CATFT (fileX) for token retrieval and file transfer
\end{tabular} \\
\hline 3.0.0 & 11/19/2019 & FINRA CAT & \begin{tabular}{l}
- Section 4: Add routedOrderld to EOM, EOJ. Added routedOrderld to side details on EOT and ETC. These attributes were added to facilitate equity linkage discovery \\
- Section 4.15: Added new link route keys for EOM, EOJ, EOT and ETC events \\
- Section 5: Add routedOrderID to OOM, OCOM, OOJ, OCOJ, OT and OTC option events. All of these attributes were added to events to facilitate option linkage discovery \\
- Section 5.6-Added new keys for Cross order and order route \\
- Section 7 - Added examples for stock events with routedOrderld \\
- Section 8 - Added examples for option events with routedOrderld \\
- \(\quad\) Section 9.1.2: Change to mandate isKindDone is populated with "true" after transmission of a fileKind is complete for the trade date. \\
- Section 10: Changed the directory structure for feedback files \\
- Section 10.9.3: Added to demonstrate feedback for Intra Exchange Linkage Discovery phase \\
- Appendix B Error Codes: Added error codes for Intra Exchange Linkage Discovery phase \\
- Appendix F Data Dictionary: Update orderAttributes to include the pairedOrderld to facilitate linkage for cross orders. Update to data dictionary for cancelReason field and add orderType values for IEX. Updates to Cboe values due to migration to Bats technology \\
- Fixed typo in appendix G - CATFT Token Service instructions and examples \\
- General verbiage and grammatical corrections
\end{tabular} \\
\hline 3.0.1 & 2/25/2019 & FINRA CAT & \begin{tabular}{l}
- Removed optnid from cross order key for OOA and OOM events \\

Spec Updates for Release CR-21 (Plan Participant 24-Hour Trading): \\
- Section 3.1 Timestamps and Sequence Numbers updated to reflect use of cycleDate for 24 -hour trading. \\
- Section 3.7 Common Events updated to add cycleDate for all common events. \\
- Section 5 Events for Options Exchanges updated to add cycleDate to all Options events. \\
- Section 5.7 Lifecycle Keys updated to add note about use of cycleDate. \\
- Appedix F: Data Dictionary updated to clarify definition of sequenceNumber. \\
Spec Updates for PP Release 7b: \\
- Section 2.5 market Maker Information and 9.2 File Submission Schedule updated to change submission deadline of Market Maker Dictionary to T+1 @ 4:00 a.m. ET. \\
- Section 10.8 Corrections, Deletions, and Replacements updated to indicate that full replacement files cannot be submitted after T+4@8:00 a.m. ET for Order Events and FINRA transactions (TRF). \\
Spec Updates for NYSE Options on Pillar Trading Platform: \\
- Appendix F: Data Dictionary updated with new definedNoteData, executionCodes, handlingInstructions, and orderAttributes. \\
Spec Updates for Release CR-\#\# (Linkage of IM MOOT and Plan Participant OT): \\
- Appendix B: Added/updated codes for MOOTLINK side intervenue linkage errors. \\
ADDITIONAL UPDATE ON 8/9/2021 \\
Updates made in revision 4.1.0-r3 for the NYSE Pillar Migration inadvertently resulted in the use of orderAttributess:Reserve as both a Boolean and a Name/Value Pair for the NYSE Options Markets.
\end{tabular} \\
\hline
\end{tabular}
\begin{tabular}{|c|c|c|c|}
\hline Version & Date & Author & Description \\
\hline & & & \begin{tabular}{l}
Because this cannot be supported, FINRA CAT and NYSE agreed to the following approach: \\
- Leave Reserve as a Boolean value for all NYSE Options markets (AMEROP and ARCAOP). \\
- Remove Reserve as a Name/Value Pair for the NYSE Options markets. \\
Add PublishQuanity as a Name/Value Pair for NYSE ARCAOP only, using the same definition provided for the Reserve Name/Value Pair. This allows ARCAOP to use either Reserve or PublishQuanity during the transition phase. PublishQuantity will be open to AMEROP at a later time when that market is really to migrate to Pillar.
\end{tabular} \\
\hline 4.1.0-r4 & 8/25/2021 & FINRA CAT & \begin{tabular}{l}
Administrative Updates: \\
- Section 3.3 updated to clarify that NBBO fields are optional on order leg events. \\
- Updated Sections 5.2 and 5.2.1.2 to clarify the requirement for leg level order events. \\
- Updated Section 5.2.1.2 to include special handling for QCC orders. \\
Spec Updates for Plan Participant Release 7b: \\
Appendix B updated to move the Duplicate Exchange/Firm Trade Key from OE.INTRAEXCHLNK. 5010 to OE.INTERVENUELNK. 6020.
\end{tabular} \\
\hline 4.1.0-r5 & 10/6/2021 & FINRA CAT & \begin{tabular}{l}
Spec Updates: \\
- routingParty updated throughout from Text (20) to Text (8) to closer align with the format of IM-related data used for linkage against the routingParty field. \\
- Order of new fields on the following events have been modified to match implementation: OOM, OCOM, OOJ, OCOJ. \\
- Added clarification to cycleDate throughout that the value should be between Event Date and T+1, inclusive. \\
Appendix F: Data Dictionary updated to include handlingInstruction of XCTBL for BX, PSX and NSDQ, inadvertently omitted from prior specification. Removed duplicative handlingInstruction section for BX, PSX and NSDQ.
\end{tabular} \\
\hline 4.1.0-r6 & 10/19/2021 & FINRA CAT & \begin{tabular}{l}
Administrative Updates: \\
- \(\quad\) Sections 1.4 and 9.1.3.1 updated to add clarification on submission of non-required fields at the end of a CSV record. \\
Spec Updates for NYSE Options on Pillar Trading Platform: \\
- Appendix F: Data Dictionary updated with new orderAttributes of ClearTheBook. \\
Spec Updates for Plan Participant Release 7b: \\
- Appendix B updated to change Intravenue Error code 5006 to 5011 and 5008 to 5012 (to eliminate conflict with IM error codes). \\
Spec Updates for NASDAQ: \\
- Added new values for handlingInstructions:Display Spec Updates for IEX (added 10/8): \\
Added new values for handlingInstructions ('Reserve' and 'DisplayRange')
\end{tabular} \\
\hline 4.1.0-r7 & 12/1/2021 & FINRA & Administrative Updates: \\
\hline
\end{tabular}
\begin{tabular}{|c|c|c|c|}
\hline Version & Date & Author & Description \\

- Added executionCode value of 'FLOOR'
\end{tabular} \\
\hline
\end{tabular}```

[^0]:    ${ }^{1}$ Customers are defined in SEC Rule 613(j)(3) as: (i) the account holder(s) of the account at a registered broker-dealer originating the order; and (ii) any person from whom the broker-dealer is authorized to accept trading instructions for such account, if different from the account holder(s).

[^1]:    ${ }^{2}$ For each CSV record, all fields up to and including the furthest of the last required field and last provided field for the record must be included. For example, consider the NOTE event in Section 3.7.1 where a number of fields are conditional or optional, including the last four fields. Each field through noteType (the last required field) must be provided (either with data or as an empty column). If one of the remaining non-required fields is provided, such as Note, then all values through Note must be provided.

[^2]:    ${ }^{3}$ The symbol master is maintained based on a data feed provided by FINRA independently from FINRA's reporting obligation as a CAT Plan Participant.

[^3]:    ${ }^{4}$ Corporate Actions for listed equities are received via a data feed provided by FINRA independently from FINRA's reporting obligation as a CAT Plan Participant.
    ${ }^{5}$ Corporate Actions for listed options are retrieved from the Options Clearing Corporation (OCC).

[^4]:    ${ }^{6}$ For purposes of 24 -hour trading, a "day" is considered to be a single cycle date. See the definition of cycleDate in Appendix F: Data Dictionary for additional details.

[^5]:    ${ }^{7}$ Industry Members must also report the material terms of the order on their route reports

[^6]:    ${ }^{8}$ For purposes of 24 -hour trading, a "day" is considered to be a single cycle date. See the definition of cycleDate for details.
